

Registered Hex TTL/PECL Translator

The MC10/100H606 is a 6-bit, registered, single supply TTL to PECL translator. The device features differential PECL outputs as well as a choice between either a differential PECL clock input or a TTL clock input. The asynchronous master reset control is a PECL level input.

With its differential PECL outputs and TTL inputs the H606 device is ideally suited for the transmit function of a HPPI bus type board-to-board interface application. The on chip registers simplify the task of synchronizing the data between the two boards.

The device is available in either ECL standard: the MECL™ 10H device is compatible with MECL 10KH logic levels, with a V_{CC} of +5 volts; while the 100H device is compatible with 100K logic levels, with a V_{CC} of +5 volts.

- Differential 50Ω ECL Outputs
- Choice Between Differential PECL or TTL Clock Input
- Single Power Supply
- Multiple Power and Ground Pins to Minimize Noise
