

High Voltage MLC Chips

For 600V to 5000V Application

High value, low leakage and small size are difficult parameters to obtain in capacitors for high voltage systems. AVX special high voltage MLC chips capacitors meet these performance characteristics and are designed for applications such as snubbers in high frequency power converters, resonators in SMPS, and high voltage coupling/DC blocking. These high voltage chip designs exhibit low ESRs at high frequencies.

Larger physical sizes than normally encountered chips are used to make high voltage chips. These larger sizes require that special precautions be taken in applying these chips in surface mount assemblies. This is due to differences in the coefficient of thermal expansion (CTE) between the substrate materials and chip capacitors. Apply heat at less than 4°C per second during the preheat. Maximum preheat temperature must be within 50°C of the soldering temperature. The solder temperature should not exceed 230°C. Chips 1808 and larger to use reflow soldering only.

Capacitors with X7R Dielectrics are not intended for AC line filtering applications. Contact plant for recommendations.

Capacitors may require protective surface coating to prevent external arcing.

*Note: Leaded terminations are available.
 Styles 1825, 2225, & 3640 are available with "N", "L" or "J" leads as seen on page Q.
 "V" denotes uncoated leaded units similar to SMD product.
 "W" denotes leaded epoxy coated units similar to SM5 product.
 IE 1825AA103KAV00J would be uncoated leaded part with "J" style leads.

**Note: Style 1808 cannot have the marking oriented in tape & reel packaging due to square cross-section of chip.
 Unmarked product is standard.
