

## 3.3V ZERO DELAY CLOCK MULTIPLIER, SPREAD SPECTRUM COMPATIBLE

**IDT23S08E**

### FEATURES:

- Phase-Lock Loop Clock Distribution for Applications ranging from 10MHz to 200MHz operating frequency
- Distributes one clock input to two banks of four outputs
- Separate output enable for each output bank
- External feedback (FBK) pin is used to synchronize the outputs to the clock input
- Output Skew <200 ps
- Low jitter <200 ps cycle-to-cycle
- 1x, 2x, 4x output options (see table):
  - IDT23S08E-1 1x
  - IDT23S08E-2 1x, 2x
  - IDT23S08E-3 2x, 4x
  - IDT23S08E-4 2x
  - IDT23S08E-1H, -2H, and -5H for High Drive
- No external RC network required
- Operates at 3.3V VDD
- Spread spectrum compatible
- Available in SOIC and TSSOP packages

### DESCRIPTION:

The IDT23S08E is a high-speed phase-lock loop (PLL) clock multiplier. It is designed to address high-speed clock distribution and multiplication applications. The zero delay is achieved by aligning the phase between the incoming clock and the output clock, operable within the range of 10 to 200MHz.

The IDT23S08E has two banks of four outputs each that are controlled via two select addresses. By proper selection of input addresses, both banks can be put in tri-state mode. In test mode, the PLL is turned off, and the input clock directly drives the outputs for system testing purposes. In the absence of an input clock, the IDT23S08E enters power down. In this mode, the device will draw less than 12µA for Commercial Temperature range and less than 25µA for Industrial temperature range, and the outputs are tri-stated.

The IDT23S08E is available in six unique configurations for both pre-scaling and multiplication of the Input REF Clock. (See available options table.)

The PLL is closed externally to provide more flexibility by allowing the user to control the delay between the input clock and the outputs.

The IDT23S08E is characterized for both Industrial and Commercial operation.

## ABSOLUTE MAXIMUM RATINGS<sup>(1)</sup>

| Symbol                                                  | Rating                           | Max.                         | Unit |
|---------------------------------------------------------|----------------------------------|------------------------------|------|
| V <sub>DD</sub>                                         | Supply Voltage Range             | −0.5 to +4.6                 | V    |
| V <sub>I</sub> <sup>(2)</sup>                           | Input Voltage Range (REF)        | −0.5 to +5.5                 | V    |
| V <sub>I</sub>                                          | Input Voltage Range (except REF) | −0.5 to V <sub>DD</sub> +0.5 | V    |
| I <sub>IK</sub> (V <sub>I</sub> < 0)                    | Input Clamp Current              | −50                          | mA   |
| I <sub>O</sub> (V <sub>O</sub> = 0 to V <sub>DD</sub> ) | Continuous Output Current        | ±50                          | mA   |
| V <sub>DD</sub> or GND                                  | Continuous Current               | ±100                         | mA   |
| T <sub>A</sub> = 55°C (in still air) <sup>(3)</sup>     | Maximum Power Dissipation        | 0.7                          | W    |
| T <sub>STG</sub>                                        | Storage Temperature Range        | −65 to +150                  | °C   |
| Operating Temperature                                   | Commercial Temperature Range     | 0 to +70                     | °C   |
| Operating Temperature                                   | Industrial Temperature Range     | −40 to +85                   | °C   |

### NOTES:

- Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
- The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
- The maximum package power dissipation is calculated using a junction temperature of 150°C and a board trace length of 750 mils.

## PIN DESCRIPTION

|                      | Pin Number | Functional Description                       |
|----------------------|------------|----------------------------------------------|
| REF <sup>(1)</sup>   | 1          | Input Reference Clock, 5 Volt Tolerant Input |
| CLKA1 <sup>(2)</sup> | 2          | Clock Output for Bank A                      |
| CLKA2 <sup>(2)</sup> | 3          | Clock Output for Bank A                      |
| V <sub>DD</sub>      | 4          | 3.3V Supply                                  |

| CLKA4 <sup>(2)</sup> | 15         | Clock Output for Bank A                      |
| FBK                  | 16         | PLL Feedback Input                           |

### NOTES:

- Weak pull down.
- Weak pull down on all outputs.
- Weak pull ups on these inputs.

## APPLICATIONS:

- SDRAM
- Telecom
- Datacom
- PC Motherboards/Workstations
- Critical Path Delay Designs

## NOTES:

1. Contact factory for availability.
2. Output phase is indeterminant (0° or 180° from input clock).

## SPREAD SPECTRUM COMPATIBLE

Many systems being designed now use a technology called Spread Spectrum Frequency Timing Generation. This product is designed not to filter off the Spread Spectrum feature of the reference input, assuming it exists. When a zero delay buffer is not designed to pass the Spread Spectrum feature through, the result is a significant amount of tracking skew, which may cause problems in systems requiring synchronization.

## ZERO DELAY AND SKEW CONTROL

To close the feedback loop of the IDT23S08E, the FBK pin can be driven from any of the eight available output pins. The output driving the FBK pin will be driving a total load of 7pF plus any additional load that it drives. The relative loading of this output (with respect to the remaining outputs) can adjust the input-output delay.

For applications requiring zero input-output delay, all outputs including the one providing feedback should be equally loaded. Ensure the outputs are loaded equally, for zero output-output skew.

## OPERATING CONDITIONS- COMMERCIAL

| Symbol          | Parameter                                   | Test Conditions | Min. | Max. | Unit |
|-----------------|---------------------------------------------|-----------------|------|------|------|
| V <sub>DD</sub> | Supply Voltage                              |                 | 3    | 3.6  | V    |
| T <sub>A</sub>  | Operating Temperature (Ambient Temperature) |                 | 0    | 70   | °C   |
| C <sub>L</sub>  | Load Capacitance below 100MHz               |                 | —    | 30   | pF   |
|                 | Load Capacitance from 100MHz to 200MHz      |                 | —    | 15   | pF   |
| C <sub>IN</sub> | Input Capacitance <sup>(1)</sup>            |                 | —    | 7    | pF   |

**NOTE:**

1. Applies to both REF and FBK.

## DC ELECTRICAL CHARACTERISTICS - COMMERCIAL

| t <sub>j</sub>    | Cycle to Cycle Jitter<br>(-1, -1H, -4, -5H)                    | Measured at 66.67 MHz, loaded outputs, 15pF Load                          | —    | —    | 200  | ps   |
|                   |                                                                | Measured at 66.67 MHz, loaded outputs, 30pF Load                          | —    | —    | 200  |      |
|                   |                                                                | Measured at 133.3 MHz, loaded outputs, 15pF Load                          | —    | —    | 100  |      |
| t <sub>j</sub>    | Cycle to Cycle Jitter<br>(-2, -2H, -3)                         | Measured at 66.67 MHz, loaded outputs, 30pF Load                          | —    | —    | 400  | ps   |
|                   |                                                                | Measured at 66.67 MHz, loaded outputs, 15pF Load                          | —    | —    | 400  |      |
| t <sub>LOCK</sub> | PLL Lock Time                                                  | Stable Power Supply, valid clocks presented on REF and FBK pins           | —    | —    | 1    | ms   |

## NOTE:

1. IDT23S08E-5H has maximum input frequency of 200MHz and maximum output of 100MHz.

## SWITCHING WAVEFORMS

## TEST CIRCUITS

**TEST CIRCUIT 1**

*Test Circuit for all Parameters Except t<sub>8</sub>*

**TEST CIRCUIT 2**

*Test Circuit for t<sub>8</sub>, Output Slew Rate On -1H, -2H, and -5H Device*

## ORDERING INFORMATION

| Ordering Code                  | Package Type | Operating Range |
|--------------------------------|--------------|-----------------|
| IDT23S08E-1DC                  | 16-Pin SOIC  | Commercial      |
| IDT23S08E-1DCI                 | 16-Pin SOIC  | Industrial      |
| IDT23S08E-1HDC                 | 16-Pin SOIC  | Commercial      |
| IDT23S08E-1HDCI                | 16-Pin SOIC  | Industrial      |
| IDT23S08E-1HPG                 | 16-Pin TSSOP | Commercial      |
| IDT23S08E-1HPGI                | 16-Pin TSSOP | Industrial      |
| IDT23S08E-2DC                  | 16-Pin SOIC  | Commercial      |
| IDT23S08E-2DCI                 | 16-Pin SOIC  | Industrial      |
| IDT23S08E-2HDC <sup>(1)</sup>  | 16-Pin SOIC  | Commercial      |
| IDT23S08E-2HDCI <sup>(1)</sup> | 16-Pin SOIC  | Industrial      |
| IDT23S08E-3DC <sup>(1)</sup>   | 16-Pin SOIC  | Commercial      |
| IDT23S08E-3DCI <sup>(1)</sup>  | 16-Pin SOIC  | Industrial      |
| IDT23S08E-4DC                  | 16-Pin SOIC  | Commercial      |
| IDT23S08E-4DCI                 | 16-Pin SOIC  | Industrial      |
| IDT23S08E-5HDC                 | 16-Pin SOIC  | Commercial      |
| IDT23S08E-5HDCI                | 16-Pin SOIC  | Industrial      |
| IDT23S08E-5HPG                 | 16-Pin TSSOP | Commercial      |
| IDT23S08E-5HPGI                | 16-Pin TSSOP | Industrial      |
