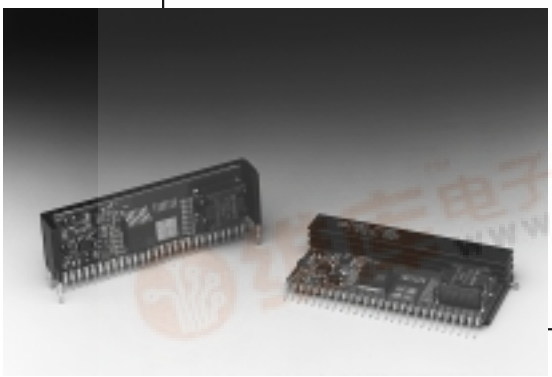
PT7602 Series

3.3V INPUT 10A PROGRAMMABLE INTEGRATED SWITCHING REGULATOR

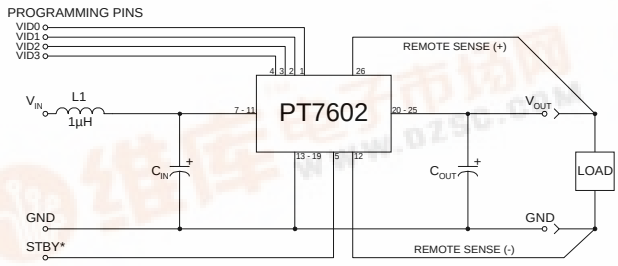
Revised 11/10/98



The PT7602 is a new series of high-performance, 10A Integrated Switching Regulators (ISRs) housed in a 27-pin SIP package. The 10A capability allows easy integration of the latest high-speed, low-voltage µPs, DSPs, ASICs, and bus drivers into existing 3.3V systems.

The output voltage of the PT7602 can be easily programmed with a 4 bit input compatible with Intel's Pentium® II Processor. A differential remote sense is also provided which automatically compensates for any voltage drop from the ISR to the load.

Standard Application



C_{in} = Required 1000µF electrolytic
C_{out} = Required 330µF electrolytic
L1 = Optional 1µH input choke

Pin-Out Information

* ISR-will operate down to no load with reduced specifications. Please note that this product is not short-circuit protected.

** The minimum input voltage is 3.1V or V_{out}+1.2V, whichever is greater.

Output Capacitors: *The PT7602 series requires a minimum ouput capacitance of 330µF for proper operation. Do not use Oscon type capacitors. The maximum allowable output capacitance is 7,500µF.*

Input Filter: *An input filter is optional for most applications. The input inductor must be sized to handle 10ADC with a typical value of 1µH. The input capacitance must be rated for a minimum of 1.0Arms of ripple current. For transient or dynamic load applications, additional capacitance may be required.*
