SAFETY

For safe operation, the unit must be installed in an enclosure which prevents accidental contact with hazardous voltages, by providing appropriate insulation or guarding. If the enclosure is made of a conducting material or the internal surfaces have a conductive coating, ensure that no part of the power supply will come into contact with it, and maintain an air gap clearance of minimum 10mm. The mains lead to the unit must be fused with a 100mA fuse. In general, it is the responsibility of the user to ensure that the incorporation of the power supply unit into the OEM equipment conforms to the relevant sections of EN 60742, in accordance with the Low Voltage Directive (LVD 93/68/EEC).

IF IN DOUBT CONTACT A LASCAR APPLICATIONS ENGINEER.

CONNECTIONS

The unit is supplied for operation with a 120V / 60Hz input. Follow the wiring diagram when using this power supply unit. Incorrect connection may damage the power supply unit.
