

## CONDUCTIVE POLYMER ALUMINUM SOLID ELECTROLYTIC CAPACITORS

nichicon

**LE** Ultra Low ESR  
series

- Ultra Low ESR, High ripple current.
- Load life of 2000 hours at 105°C.
- Radial lead type : Lead free flow soldering condition correspondence
- Adapted to the RoHS directive (2002/95/EC).

**LE** ← Low ESR → **LF**

NEW

### ■ Specifications

| Item   | Performance Characteristics   |  |                    |                                    |               |   |          |   |                      |                                 |
|--|---|--|--------------------|------------------------------------|---------------|---|----------|---|----------------------|---------------------------------|
| Category Temperature Range                     | -55 ~ +105°C  |  |                    |                                    |               |   |          |   |                      |                                 |
| Rated Voltage Range                            | 2.5 ~ 6.3V  |  |                    |                                    |               |   |          |   |                      |                                 |
| Rated Capacitance Range                        | 470 ~ 1500μF  |  |                    |                                    |               |   |          |   |                      |                                 |
| Capacitance Tolerance                          | ± 20% at 120Hz, 20°C  |  |                    |                                    |               |   |          |   |                      |                                 |
| $\tan \delta$                                  | Not more than value of Standard ratings at 120Hz, 20°C  |  |                    |                                    |               |   |          |   |                      |                                 |
| ESR (*1)                                       | Not more than value of Standard ratings at 100kHz, 20°C   |  |                    |                                    |               |   |          |   |                      |                                 |
| Leakage Current (*2)                           | Not more than value of Standard ratings. After 2 minute's application of rated voltage. 20°C  |  |                    |                                    |               |   |          |   |                      |                                 |
| Characteristics of Temperature Impedance Ratio | Z+105°C / Z+20°C ≤ 1.25 (100kHz)<br>Z-55°C / Z+20°C ≤ 1.25  |  |                    |                                    |               |   |          |   |                      |                                 |
| Endurance                                      | After 2000 hours' application of rated voltage at 105°C, capacitors meet the specified value for life characteristics listed at right.  | <table border="1"> <tr> <td>Capacitance change</td><td>Within ± 20% of initial value (*3)</td></tr> <tr> <td><math>\tan \delta</math></td><td>150% or less of the initial specified value</td></tr> <tr> <td>ESR (*1)</td><td>150% or less of the initial specified value</td></tr> <tr> <td>Leakage current (*2)</td><td>Initial specified value or less</td></tr> </table> | Capacitance change | Within ± 20% of initial value (*3) | $\tan \delta$ | 150% or less of the initial specified value | ESR (*1) | 150% or less of the initial specified value | Leakage current (*2) | Initial specified value or less |
| Capacitance change                             | Within ± 20% of initial value (*3)  |  |                    |                                    |               |   |          |   |                      |                                 |

| Resistance to Soldering Heat                   | To comply with recommended conditions for reflow soldering. Pre-heating shall be done at 150 ~ 200°C and for 60 ~ 180 sec. Peak temp. is 265°C, within 10 sec. Measurement for solder temperature profile shall be made at a point on the terminal nearest where the terminals protrude through the soldering side of PC board. | <table border="1"> <tr> <td>Capacitance change</td><td>Within ± 10% of initial value (*3)</td></tr> <tr> <td><math>\tan \delta</math></td><td>130% or less of the initial specified value</td></tr> <tr> <td>ESR (*1)</td><td>130% or less of the initial specified value</td></tr> <tr> <td>Leakage current (*2)</td><td>Initial specified value or less</td></tr> </table> | Capacitance change | Within ± 10% of initial value (*3) | $\tan \delta$ | 130% or less of the initial specified value | ESR (*1) | 130% or less of the initial specified value | Leakage current (*2) | Initial specified value or less |
| Capacitance change                             | Within ± 10% of initial value (*3)  |  |                    |                                    |               |   |          |   |                      |                                 |
| $\tan \delta$                                  | 130% or less of the initial specified value   |  |                    |                                    |               |   |          |   |                      |                                 |
| ESR (*1)                                       | 130% or less of the initial specified value   |  |                    |                                    |               |   |          |   |                      |                                 |
| Leakage current (*2)                           | Initial specified value or less   |  |                    |                                    |               |   |          |   |                      |                                 |
| Marking  | Navy blue print on the case top.  |  |                    |                                    |               |   |          |   |                      |                                 |

(\*1) ESR measurements should be made at a point on the terminal nearest the end seal of the capacitor.

(\*2) Conditioning : If there is doubt about the measured result, measurement should be made again after the rated voltage is applied for 120 minutes at the temperature of 105°C.

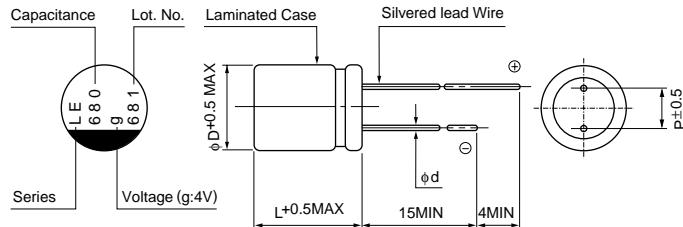

(\*3) Initial value : The value before test of examination of resistance to soldering.

# CONDUCTIVE POLYMER ALUMINUM SOLID ELECTROLYTIC CAPACITORS
