FXM2IC102

Dual Supply 2-Bit I²C Interface Voltage Translator with Configurable Voltage Supplies and Signal Levels and Auto Direction Sensing

Features

- Bi-directional interface between any two levels from 1.65V to 5.5V
- Buffer isolates capacitance and allows 400pF on each port
- Open-drain inputs/outputs
- Accommodates Standard-mode and Fast-mode I²C-bus devices
- Fully configurable: Inputs and outputs track V_{CC} level
- Non-preferential power-up; either V_{CC} may be powered-up first
- Outputs remain in 3-state until active V_{CC} level is reached
- Outputs switch to 3-state if either V_{CC} is at GND
- Power off high impedance
- Active high output enable referenced to V_{CCA} voltage
- 5V tolerant output enable
- Packaged in 8-terminal leadless MicroPak (1.6mm x 1.6mm)
- Direction control not needed
- ESD protection exceeds:
 - 8kV HBM ESD
(per JESD22-A114 & Mil Std 883e 3015.7)
 - 15kV HBM I/O to GND ESD
(per JESD22-A114 & Mil Std 883e 3015.7)

General Description

The FXM2IC102 is a configurable dual-voltage-supply translator designed for bi-directional voltage translation over a wide range of input and output voltages levels.

The FXM2IC102 is intended for use as a voltage translator in applications using the I²C bus interface. Input and output voltage levels are compatible with I²C device specification voltage levels.

The device is designed so that the A port tracks the V_{CCA} level, and the B port tracks the V_{CCB} level. This allows for bi-directional voltage translation over the voltage ranges: 1.8V, 2.5V, 3.3V, 5.0V.

The device remains in 3-state until both V_{CCs} reach active levels allowing either V_{CC} to be powered-up first. Internal power down control circuits place the device in 3-state if either V_{CC} is removed.

The two ports of the device have auto-direction sense capability. Either port may sense an input signal and transfer it as an output signal to the other port.

Ordering Information

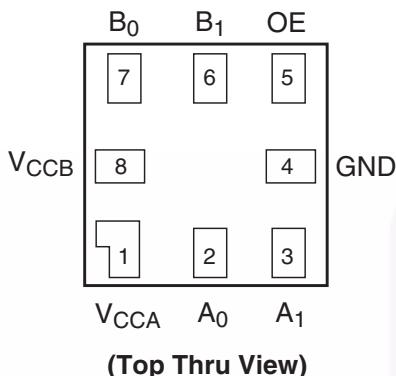

Order Number	Package Number	Product Code Top Mark	Package Description	Supplied As
FXM2IC102L8X	MAC08A	XG	8-Lead MicroPak, 1.6 mm Wide	3k Units on Tape and Reel

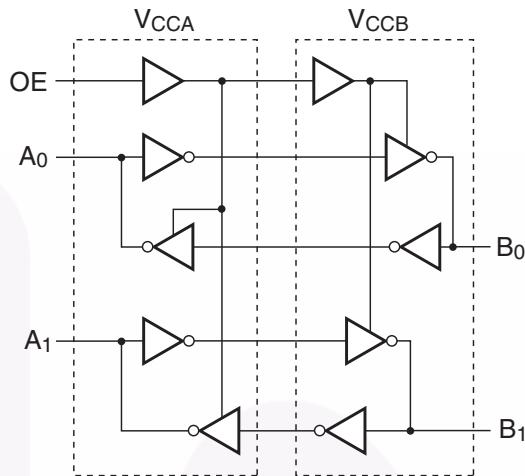

All packages are lead free per JEDEC: J-STD-020B standard.

Pin Description

Number	Name	Description
1	V _{CCA}	A Side Power Supply
2, 3	A ₀ , A ₁	A Side Inputs or 3-State Outputs
4	GND	
5	OE	Output Enable Input
6, 7	B ₁ , B ₀	B Side Inputs or 3-State Outputs
8	V _{CCB}	B Side Power Supply

Function Table

Control	Outputs	
	OE	
L	3-State	
H	Normal Operation	

H = HIGH Logic Level

L = LOW Logic Level

Power-Up/Power-Down Sequencing

FXM translators offer an advantage in that either V_{CC} may be powered up first. This benefit derives from the chip design. When either V_{CC} is at 0V, outputs are in a high-impedance state. The control input (OE) is designed to track the V_{CCA} supply. A pull-down resistor tying OE to GND should be used to ensure that bus contention, excessive currents, or oscillations do not occur during power-up/power-down. The size of the pull-down resistor is based upon the current-sinking capability of the device driving the OE pin.

The recommended power-up sequence is the following:

1. Apply power to the first V_{CC}.
2. Apply power to the second V_{CC}.
3. Drive the OE input high to enable the device.

The recommended power-down sequence is the following:

1. Drive OE input low to disable the device.
2. Remove power from either V_{CC}.
3. Remove power from other V_{CC}.

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameter	Rating
V_{CCA}, V_{CCB}	Supply Voltage	-0.5V to +7.0V
V_I	DC Input Voltage A Port B Port Control Input (OE)	-0.5V to +7.0V -0.5V to +7.0V -0.5V to +7.0V -0.5V to +7.0V
V_O	Output Voltage ⁽¹⁾ A _n Outputs 3-State B _n Outputs 3-State A _n Outputs Active B _n Outputs Active	-0.5V to +7.0V -0.5V to +7.0V -0.5V to $V_{CCA} + 0.5V$ -0.5V to $V_{CCB} + 0.5V$
I_{IK}	DC Input Diode Current @ $V_I < 0V$	-50mA
I_{OK}	DC Output Diode Current @ $V_O < 0V$ $V_O > V_{CC}$	-50mA +50mA
I_{OH}/I_{OL}	DC Output Source/Sink Current	-50mA / +50mA
I_{CC}	DC V_{CC} or Ground Current per Supply Pin	$\pm 100mA$
T_{STG}	Storage Temperature Range	-65°C to +150°C

Note:

1. I_O Absolute Maximum Rating must be observed.

Recommended Operating Conditions⁽²⁾

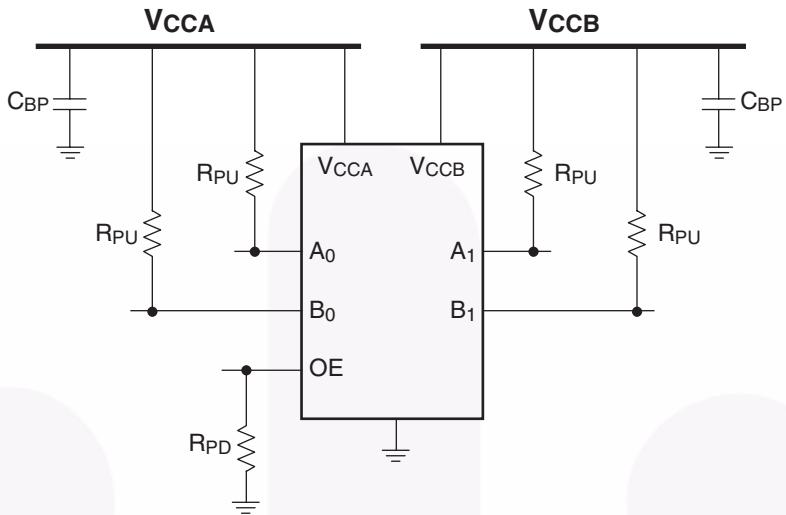

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to absolute maximum ratings.

Symbol	Parameter	Rating
V_{CCA} or V_{CCB}	Power Supply Operating	1.65V to 5.5V
V_I	Input Voltage A Port B Port Control Input (OE)	0.0V to 5.5V 0.0V to 5.5V 0.0V to V_{CCA}
$\Delta t/\Delta v$	Maximum Input Edge Rate $V_{CCA/B} = 1.65V$ to 5.5V	200ns/V
T_A	Free Air Operating Temperature	-40°C to +85°C

Note:

2. All unused inputs and I/O pins must be held at V_{CCI} or GND.

FXM2IC102 Application Circuit

Application Notes

The FXM2IC102 has open-drain outputs and requires pull-up resistors on the four data I/O pins as shown in the above figure. If a pair of data I/O pins (A_n/B_n) are not used, they both should be tied to Gnd (or both to V_{CC}). In this case, pull-down or pull-up resistors are not required.

The recommended values for the pull-up resistors (R_{PU}) are 1k Ω minimum to 10k Ω maximum. The recommended value for the bypass capacitors (C_{BP}) is 1.1 μ F. The recommended value for the pull-down resistor (R_{PD}) on OE is 1k Ω or higher and may depend upon the current-sinking capability of the device driving the OE pin.

DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DO NOT EXPAND THE TERMS OF FAIRCHILD'S WORLDWIDE TERMS AND CONDITIONS, SPECIFICALLY THE WARRANTY THEREIN, WHICH COVERS THESE PRODUCTS.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

PRODUCT STATUS DEFINITIONS

Definition of Terms

Datasheet Identification	Product Status	Definition
Advance Information	Formative / In Design	This datasheet contains the design specifications for product development. Specifications may change in any manner without notice.
Preliminary	First Production	This datasheet contains preliminary data; supplementary data will be published at a later date. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design.
No Identification Needed	Full Production	This datasheet contains final specifications. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve the design.
Obsolete	Not In Production	This datasheet contains specifications on a product that is discontinued by Fairchild Semiconductor. The datasheet is for reference information only.
