

# ALUMINUM ELECTROLYTIC CAPACITORS

查询UJB0L103THD供应商

捷多邦，专业PCB打样工厂，24小时加急出货 nichicon

Memory Back-Up Use

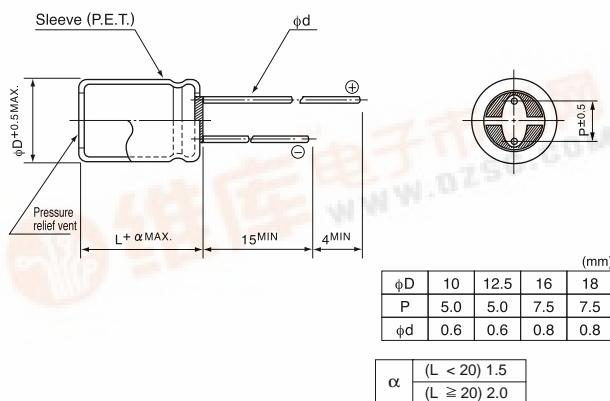

- Developed for memory back-up, with load life of 1000 hours at +85°C.
- Superior to electric double layer type capacitors in the following characteristics:
  - Better voltage maintenance.
  - Speedier charge-up available due to low impedance feature.
  - Wider operating temperature range of -25 ~ +85°C.
- Adapted to the RoHS directive (2002/95/EC).

## ■ Specifications

Item	Performance Characteristics															
Category Temperature Range	-25 ~ +85°C															
Rated Voltage Range	5.5V															
Rated Capacitance Range	2.2 ~ 47mF See Note 1															
Capacitance Tolerance	-10 ~ +50%															
Leakage Current	C (μA) (C = Rated capacitance value in mF) See Note 2															
Voltage Maintenance	More than 3.5V See Note 3															
Stability at Low Temperature	Capacitance (-25°C) / Capacitance (20°C) × 100 ≥ 70%															
Impedance (Ω) MAX. See Note 4	Capacitance (mF)	2.2	3.3	4.7	8.2	10	18	22	27	33	39	47				
	Impedance (Ω)	1.5	1.0	0.6	0.3	0.3	0.2	0.2	0.2	0.2	0.1	0.1				
Endurance	After 1000 hours' application of rated voltage at 85°C, capacitors meet the characteristic requirements listed at right.					Capacitance change	Within ±30% of initial value									
						Impedance	Within 4 times of initial specified value									
						Leakage current	Initial specified value or less									
						Voltage maintenance	Satisfies initial specified value									
Shelf Life	After storing the capacitors under no load at 85°C for 500 hours, and after performing voltage treatment based on JIS C 5101-4 clause 4.1 at 20°C, they will meet the requirements for endurance characteristics listed above.															
Marking	Printed with white color letter on black sleeve.															

## ■ Radial Lead Type

• Please refer to page 21 about the end seal configuration.

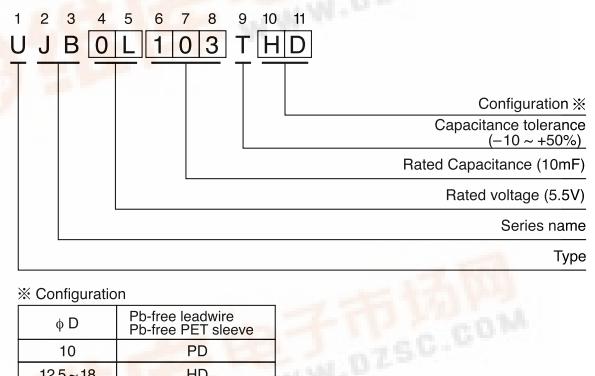

### Note :

- After charging a capacitor at the rated voltage of 5.5V for an hour, the capacitance is calculated by the following formula, measuring the time of duration,  $\Delta T$  (Sec.) from 4V down to 3V when constant current discharge at  $i$  (mA) =  $0.02 \times$  nominal capacitance is carried out.

$$\text{Capacitance (mF)} = i \times \Delta T$$

- Current value (20°C) after applying the rated voltage of 5.5V for an hour.
- Voltage value maintained after the capacitor is subjected to 1 hour voltage application at 5V and then left at room temperature (lower than 25°C) for 24 hours.
- Measuring Frequency : 1kHz (20°C)

## Type numbering system (Example : 5.5V 10mF)

## ■ Dimensions

Ratings (V-mF)	Code	Case Size φD × L (mm)
5.5—2.2	OL222	10×12.5
5.5—3.3	OL332	10×16
5.5—4.7	OL472	10×20
5.5—8.2	OL822	12.5×20
5.5—10	OL103	12.5×25
5.5—18	OL183	16×25
5.5—22	OL223	16×31.5
5.5—27	OL273	16×35.5
5.5—33	OL333	18×31.5
5.5—39	OL393	18×35.5
5.5—47	OL473	18×40
