SCDS062C - JUNE 1998 - REVISED NOVEMBER 2001

- 5-Ω Switch Connection Between Two Ports
- TTL-Compatible Input Levels
- Bus Hold on Data Inputs/Outputs Eliminates the Need for External Pullup/Pulldown Resistors

## description

The SN74CBTH16211 provides 24 bits of high-speed TTL-compatible bus switching. The low on-state resistance of the switch allows connections to be made with minimal propagation delay.

The device is organized as dual 12-bit bus switches with separate output-enable ( $\overline{OE}$ ) inputs. It can be used as two 12-bit bus switches or one 24-bit bus switch. When  $\overline{OE}$  is low, the associated 12-bit bus switch is on, and the A port is connected to the B port. When  $\overline{OE}$  is high, the switch is open, and a high-impedance state exists between the two ports.

Active bus-hold circuitry is provided to hold unused or floating A and B ports at a valid logic level.

To ensure the high-impedance state during power up or power down,  $\overline{OE}$  should be tied to  $V_{CC}$  through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

<sup>†</sup> Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package.

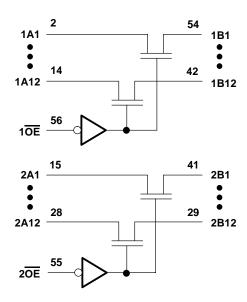

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

## FUNCTION TABLE (each bus switch)

INPUT OE	FUNCTION
L	A port = B port
Н	Disconnect

## logic diagram (positive logic)

## absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage range, V <sub>CC</sub>		0.5 V to 7 V
Input voltage range, V <sub>I</sub> (see Note 1)		. −0.5 V to 7 V
Continuous channel current		128 mA
Input clamp current, I <sub>IK</sub> (V <sub>I</sub> < 0)		–50 mA
Package thermal impedance, $\theta_{JA}$ (see Note 2):	DGG package	64°C/W
•••	DGV package	48°C/W
	DL package	56°C/W
Storage temperature range, T <sub>stg</sub>		-65°C to 150°C

<sup>†</sup> Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

## recommended operating conditions (see Note 3)

		MIN	MAX	UNIT
Vcc	Supply voltage	4	5.5	V
VIH	High-level control input voltage	2		V
VIL	Low-level control input voltage		8.0	V
TA	Operating free-air temperature	-40	85	°C

NOTE 3: All unused control inputs of the device must be held at V<sub>CC</sub> or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, literature number SCBA004.

<sup>2.</sup> The package thermal impedance is calculated in accordance with JESD 51-7.

SCDS062C - JUNE 1998 - REVISED NOVEMBER 2001

# electrical characteristics over recommended operating free-air temperature range (unless otherwise noted)

PA	RAMETER		TEST CONDITIONS				MAX	UNIT
VIK		$V_{CC} = 4.5 \text{ V},$	I <sub>I</sub> = -18 mA				-1.2	V
ļ.,	Control inputs	$V_{CC} = 0 V$ ,	V <sub>I</sub> = 5.5 V				±10	^
lı .	All inputs	$V_{CC} = 5.5 V$ ,	$V_I = 5.5 \text{ V or GND}$				±10	μΑ
I <sub>BHL</sub> ‡		$V_{CC} = 4.5 \text{ V},$	V <sub>I</sub> = 0.8 V		100			μΑ
IBHH§		$V_{CC} = 4.5 \text{ V},$	V <sub>I</sub> = 2 V		-100			μΑ
IBHLO	Ī	$V_{CC} = 5.5 \text{ V},$	$V_{I} = 0 \text{ to } 5.5 \text{ V}$		500			μΑ
Івнно	#	$V_{CC} = 5.5 \text{ V},$	$V_{I} = 0 \text{ to } 5.5 \text{ V}$		-500			μΑ
ICC		$V_{CC} = 5.5 \text{ V},$	$I_{O} = 0$ ,	$V_I = V_{CC}$ or GND			3	μΑ
∆ICC	Control inputs	$V_{CC} = 5.5 \text{ V},$	One input at 3.4 V,	Other inputs at $V_{CC}$ or GND			2.5	mA
		$V_{CC} = 4 \text{ V},$ TYP at $V_{CC} = 4 \text{ V}$	V <sub>I</sub> = 2.4 V,	I <sub>I</sub> = 15 mA		14	20	
ron <sup>★</sup>			V <sub>I</sub> = 0	I <sub>I</sub> = 64 mA		5	7	Ω
		V <sub>CC</sub> = 4.5 V	v   = 0	$I_I = 30 \text{ mA}$		5	7	
			V <sub>I</sub> = 2.4 V,	I <sub>I</sub> = 15 mA		8	12	

<sup>&</sup>lt;sup>†</sup> All typical values are at  $V_{CC} = 5 \text{ V}$  (unless otherwise noted),  $T_A = 25^{\circ}\text{C}$ .

# switching characteristics over recommended operating free-air temperature range, $C_L = 50 \text{ pF}$ (unless otherwise noted) (see Figure 1)

PARAMETER	FROM (INPUT)	TO (OUTPUT)	V <sub>CC</sub> = 4 V		V <sub>CC</sub> = 5 V ± 0.5 V		UNIT
	(INFOT)	(001101)	MIN	MAX	MIN	MAX	
tpd□	A or B	B or A		0.35		0.25	ns
t <sub>en</sub>	ŌĒ	A or B		9.9	1	9.6	ns
<sup>t</sup> dis	ŌĒ	A or B		9.5	1	8.3	ns

The propagation delay is the calculated RC time constant of the typical on-state resistance of the switch and the specified load capacitance, when driven by an ideal voltage source (zero output impedance).

<sup>&</sup>lt;sup>‡</sup> The bus hold circuit can sink at least the minimum low sustaining current at V<sub>IL</sub> max. I<sub>BHL</sub> should be measured after lowering V<sub>IN</sub> to GND and then raising it to V<sub>II</sub> max.

<sup>§</sup> The bus hold circuit can source at least the minimum high sustaining current at V<sub>IH</sub> min. I<sub>BHH</sub> should be measured after raising V<sub>IN</sub> to V<sub>CC</sub> and then lowering it to V<sub>IH</sub> min.

 $<sup>\</sup>P$  An external driver must source at least IBHLO to switch this node from low to high.

<sup>#</sup> An external driver must sink at least IBHHO to switch this node from high to low.

This is the increase in supply current for each input that is at the specified TTL voltage level rather than V<sub>CC</sub> or GND.

<sup>\*</sup>Measured by the voltage drop between the A and B terminals at the indicated current through the switch. On-state resistance is determined by the lowest voltage of the two (A or B) terminals.

#### PARAMETER MEASUREMENT INFORMATION

NOTES: A. C<sub>L</sub> includes probe and jig capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR  $\leq$  10 MHz,  $Z_{O} = 50 \,\Omega_{1}$  t<sub>r</sub>  $\leq$  2.5 ns. t<sub>r</sub>  $\leq$  2.5 ns.
- D. The outputs are measured one at a time with one transition per measurement.
- E. tpLz and tpHz are the same as tdis.
- F. tpzL and tpzH are the same as ten.
- G. tpLH and tpHL are the same as tpd.

<sup>&</sup>lt;sup>(1)</sup> The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

**Pb-Free** (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

#### IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
