FEMTOCLOCKS™ CRYSTAL-TO-LVCMOS/LVTTL FREQUENCY SYNTHESIZER

GENERAL DESCRIPTION

The ICS840001-34 is a two output LVCMOS/LVTTL Synthesizer and a member of the HiPerClockS™ family of high performance devices from ICS. One output is the LVCMOS/LVTTL main synthesized clock output (Q) and one output is a three-state LVCMOS/LVTTL reference clock (REF_CLK) output at the frequency of the crystal oscillator. The device can accept crystal from 15.3125MHz to 42.67MHz and can synthesize outputs from 81.67MHz to 213.33MHz. The ICS840001-34 has excellent <1ps phase jitter performance over the 637kHz – 10MHz integration range. The ICS840001-34 is packaged in a 3mm x 3mm 16-pin VFQFN, making it ideal for use on space constrained boards.

APPLICATION INFORMATION

POWER SUPPLY FILTERING TECHNIQUES

As in any high speed analog circuitry, the power supply pins are vulnerable to random noise. The ICS840001-34 provides separate power supplies to isolate any high switching noise from the outputs to the internal PLL. V_{DD} , V_{DDA} and V_{DDO} should be individually connected to the power supply plane through vias, and bypass capacitors should be used for each pin. To achieve optimum jitter performance, power supply isolation is required. *Figure 1* illustrates how a 10Ω resistor along with a $10\mu F$ and a $.01\mu F$ bypass capacitor should be connected to each V_{DDA} pin.

FIGURE 1. POWER SUPPLY FILTERING

CRYSTAL INPUT INTERFACE

The ICS840001-34 has been characterized with $18pF$ parallel resonant crystals. The capacitor values, $C1$ and $C2$, shown in *Figure 2* below were determined using a $26.5625MHz$, $18pF$ par-

allel resonant crystal and were chosen to minimize the ppm error. The optimum $C1$ and $C2$ values can be slightly adjusted for different board layouts.
