TLC59212

SCLS713A −MARCH 2009−REVISED JULY 2015

TLC59212 8-Bit Open-Collector Sink Driver with Latch

1 Features

- LBC3S (Lin BiCMOS) Process
- High Voltage Output (V_{OUT} = 24 V)
- Output Current (I_{OL} Maximum = 40 mA)
- Latch-Up Performance Exceeds 250 mA Per JEDEC Standard JESD-17
- ESD Protection Exceeds JESD 22
  - 2000-V Human Body Model (A114-A)
  - 200-V Machine Model (A115-A)
  - 1000-V Charged Device Model (C101)

2 Applications

- Lamps and Displays (LED)
- Hammers
- Relay

3 Description

The TLC59212 device is an 8-bit open-collector driver with latch designed for 5-V V_{CC} operation.

These circuits are positive-edge-triggered D-type flip-flops with a direct clear ($\overline{CLR}$) input. Information at the data (D) input meeting the setup time requirements is transferred to the $\overline{Y}$ output on the positive-going edge of the clock (CLK) pulse. Clock triggering occurs at a particular voltage level and is not directly related to the transition time of the positive-going pulse. When CLK is at either the high or low level, the D-input has no effect at the output.

The TLC59212 is characterized for operation from −40°C to 85°C.

Device Information[1]

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TLC59212	PDIP (20)	24.33 mm × 6.35 mm
	TSSOP (20)	6.50 mm × 4.40 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)[1]

			MIN	MAX	UNIT
V_{CC}	Supply voltage		–0.5	7	V
D	Input voltage	D, CLK, $\overline{CLR}$	–0.5	7	V
V_O	Output voltage	H output	–0.5	30	V
I_O	Output current	1 bit for output low		40	mA
I_{IK}	Input clamp current	$V_I < 0$ V		–20	mA
T_A	Operating free-air temperature		–40	85	°C
T_{stg}	Storage temperature		–65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001[1]	±2000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101[2]	±1000	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

V_{CC} = 4.5 V to 5.5 V. Over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V_{CC}	Supply voltage	4.5	5.5	V
V_{IH}	High-level input voltage	$V_{CC} \times 0.7$	V_{CC}	V
V_{IL}	Low-level input voltage	0	$V_{CC} \times 0.3$	V
V_O	Output voltage	0	24	V
I_O	Output current, Duty cycle < 100%	0	40	mA
T_A	Operating free-air temperature	–40	85	°C

6.4 Thermal Information

		TLC59212		
	THERMAL METRIC[1]	N (PDIP)	PW (TSSOP)	UNIT
		20 PINS	20 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	55.8	96.0	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	47.4	29.8	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	36.8	47.3	°C/W
ψ_{JT}	Junction-to-top characterization parameter	24.3	1.8	°C/W
ψ_{JB}	Junction-to-board characterization parameter	36.6	46.7	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	—	—	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, SPRA953.

6.5 Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

	PARAMETER	TEST CONDITIONS		MIN	TYP	MAX	UNIT
V_{t+}	Positive-going input threshold	D, $\overline{CLR}$, CLK				3.5	V
V_{t-}	Negative-going input threshold	D, $\overline{CLR}$, CLK		1.5			V
V_t	Hysteresis	D, $\overline{CLR}$, CLK		0.5		2	V
$V_{O(off)}$	Output tr sustain voltage	I_{ce} = 1 mA		24			V
I_{OZ}	Output tr leakage current	V_O = 24 V			0	5	µA
I_{IH}	High-level input current	V_{CC} = 5.5 V, V_I = 5.5 V			0	1	µA
I_{IL}	Low-level input current	V_{CC} = 5.5 V, V_I = 0 V			0	–1	µA
I_{off}	Leakage current	V_I = 0 to 5 V, V_O = 0 to 30 V, V_{CC} = 0			0	5	µA
I_{CC}	Supply current	V_I = 0 to 5 V, V_O = 0 to 30 V, V_{CC} = 0	Output = all OFF		0	5	µA
			Output = all ON		8	20	
V_{OL}	Low-level output voltage	V_{CC} = 4.5 V, I_O = 40 mA			0.32	0.55	V
r_{ON}	ON-state resistance	V_{CC} = 4.5 V, I_O = 10 mA			8	13	Ω
C_i	Input capacitance	V_I = V_{CC} or GND				5	pF

6.6 Timing Requirements

over T_A = –40°C to 85°C, V_{CC} = 4.5 V to 5.5 V, O/C to Y (unless otherwise noted)

				MIN	MAX	UNIT
t_{su}	Setup time	CLK	V_{DD} = 4.5 V to 5.5 V	5		ns
t_h	Hold time	CLK	V_{DD} = 4.5 V to 5.5 V	15		ns
t_w	Pulse width	CLK, $\overline{CLR}$	V_{DD} = 4.5 V to 5.5 V	20		ns

6.7 Switching Characteristics

over operating free-air temperature range (unless otherwise noted), see Figure 2

PARAMETER	TEST CONDITIONS	LOAD CAPACITANCE	T_A = 25°C			T_A = –40°C to 85°C		UNIT

VOLTAGE WAVEFORMS
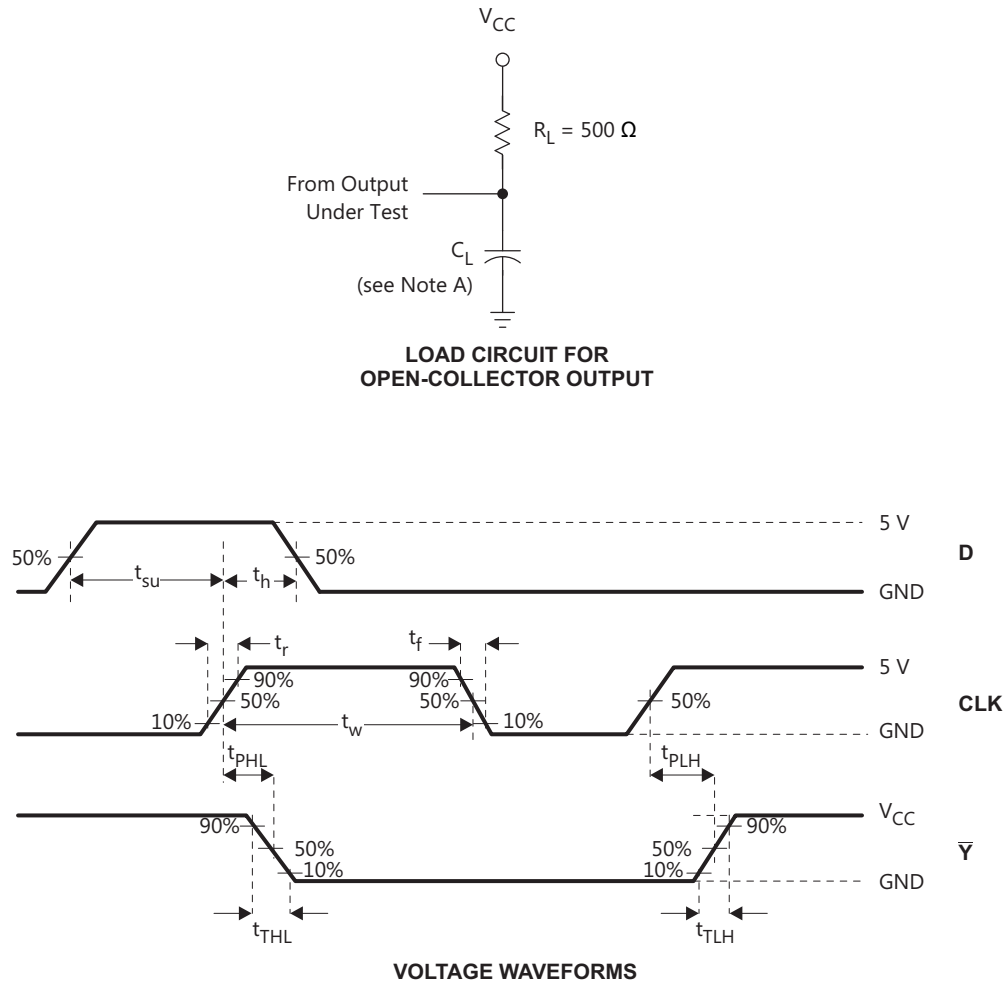

A. C_L includes probe and jig capacitance.

B. All input pulses are supplied by generators having the following characteristics: PRR ≤ 1 MHz, Z_O = 50 Ω, t_r ≤ 3 ns, and t_f ≤ 3 ns.

C. The outputs are measured one at a time with one transition per measurement.

D. t_{PLH} and t_{PHL} are the same as t_{pd}.

Figure 2. Test Circuit and Voltage Waveforms

8 Detailed Description

8.1 Overview

The TLC59212 device is an 8-bit open-collector driver with latch designed for 5-V V_{CC} operation.

8.2 Functional Block Diagram
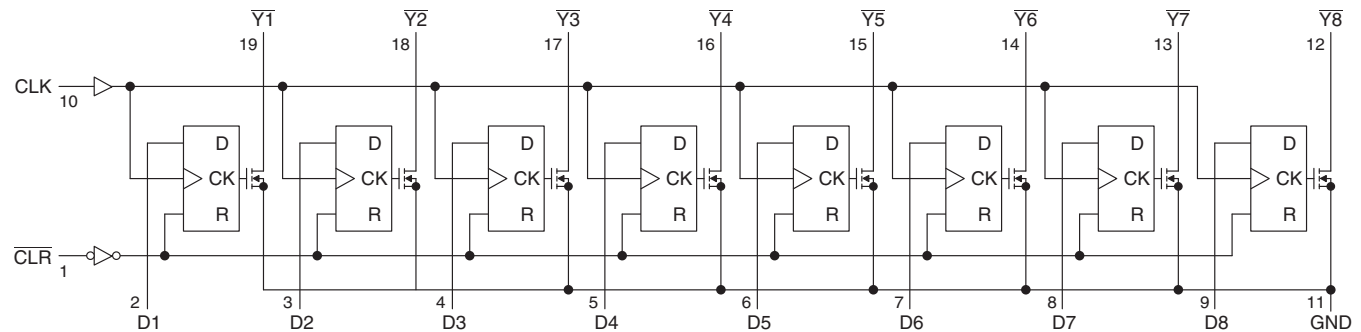

(1) This symbol is in accordance with ANSI/IEEE Standard 91-1984 and IEC Publication 617-12.

Figure 3. Logic Symbol

8.3 Feature Description

Each of the 8 channels is controlled by its input (Dn), a direct clear ($\overline{CLR}$), and clock (CLK) through a positive-edge-triggered D-type flip-flops. Information at the data (D) input meeting the setup time requirements is transferred to the output ($\overline{Y}$) on the positive-going edge of the clock (CLK) pulse. When CLK is at either the high or low level, the D-input has no effect at the output. When $\overline{CLR}$ is at low level, the D-input has no effect at the output.

8.4 Device Functional Modes

Table 1 lists the functional modes of the TLC59212.

Table 1. Function Table (Each Latch)[1]

INPUTS			OUTPUT
$\overline{CLR}$	CLK	D	$\overline{Y}$
L	X	X	H*
H	↑	L	H*
H	↑	H	L
H	L	X	Y_0
H	↓	X	Y_0

(1) L: Low-level
H: High-level
H*: with pullup resistor
X: Irrelevant
↑: Rising edge
↓: Falling edge
Z : High-impedance (OFF)

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

In LED display application, TLC59212 is used to drive the current sink for 8 LEDs in parallel. LED display pattern can be created by providing different bit pattern. At every positive clock edge, new bit pattern will be transferred to LED display.

9.2 Typical Application
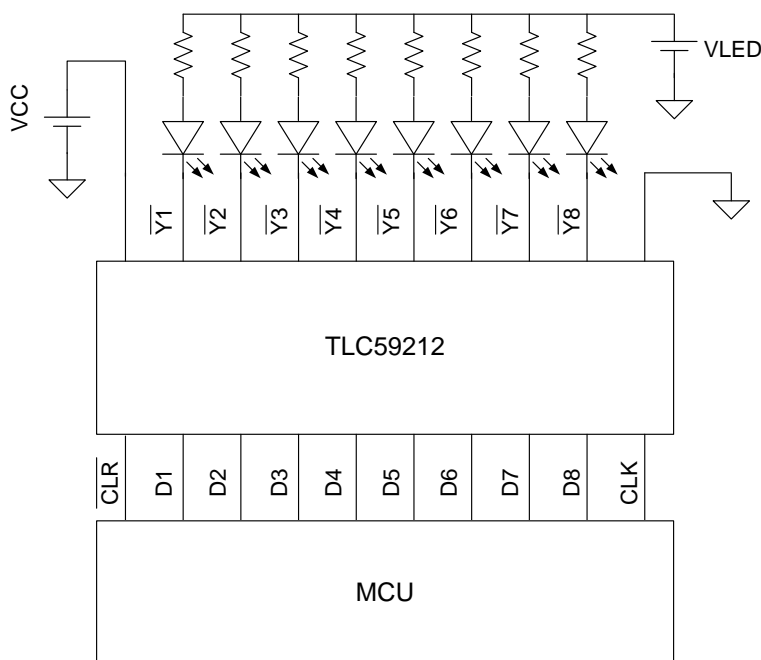

Figure 4. Typical Application Diagram

9.2.1 Design Requirements

For LED display application, LED is selected based on the application. The current level is determined by the required brightness. Given the available LED supply, the resistor value could be determined. The TCL59212 has a maximum current requirement less than 40mA for constant on application.

9.2.2 Detailed Design Procedure

The selection of supply voltage (VLED), LED, and resistor sets the current of the LED.

$$VR + VL + VOL = VLED \tag{1}$$

$$I = (VLED - VL - VOL) / R \tag{2}$$

VR is the voltage drop across the resistor, VL is the voltage drop across the LED when LED is on, VOL is the output voltage at the collector when the driver is enabled. For example, when VLED = 5 V, VL = 2.4 V, and VOL = 0.35 V, a 55-Ω resistor is used to obtain output current 40 mA.

Product Folder Links: *TLC59212*

Typical Application (continued)

9.2.3 Application Curve
Figure 5. Output Voltage and Current Response

10 Power Supply Recommendations

The supply voltage to TLC59212 is from 4.5 V to 5.5 V. The voltage at output can be up to 24 V.

Product Folder Links: *TLC59212*

11 Layout

11.1 Layout Guidelines

The traces that carry current from the LED cathodes to the output pins must be wide enough to support the current (up to 40 mA).

12 Device and Documentation Support

12.1 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

TI E2E™ Online Community *TI's Engineer-to-Engineer (E2E) Community.* Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

Design Support *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

12.2 Trademarks

E2E is a trademark of Texas Instruments.
All other trademarks are the property of their respective owners.

12.3 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

12.4 Glossary

SLYZ022 — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TLC59212IPWR	ACTIVE	TSSOP	PW	20	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	-40 to 85	Y59212	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
