

## TPA6111A2 150-mW Stereo Audio Power Amplifier

### 1 Features

- 150-mW Stereo Output
- PC Power Supply Compatible
  - Fully Specified for 3.3-V and 5-V Operation
  - Operation to 2.5 V
- Pop Reduction Circuitry
- Internal Midrail Generation
- Thermal and Short-Circuit Protection
- Surface-Mount Packaging
  - PowerPAD™ MSOP
  - SOIC
- Pin Compatible With TPA122, LM4880, and LM4881 (SOIC)

### 2 Applications

- Smart Phones and Wireless Handsets
- Portable Tablets
- Notebook PCs and Docking Stations

### 3 Description

The TPA6111A2 is a stereo audio power amplifier packaged in either an 8-pin SOIC or an 8-pin PowerPAD MSOP package capable of delivering 150 mW of continuous RMS power per channel into 16-Ω loads. Amplifier gain is externally configured by means of two resistors per input channel and does not require external compensation for settings of 0 to 20 dB.

THD+N, when driving a 16-Ω load from 5 V, is 0.03% at 1 kHz, and less than 1% across the audio band of 20 Hz to 20 kHz. For 32-Ω loads, the THD+N is reduced to less than 0.02% at 1 kHz, and is less than 1% across the audio band of 20 Hz to 20 kHz. For 10-kΩ loads, the THD+N performance is 0.005% at 1 kHz, and less than 0.5% across the audio band of 20 Hz to 20 kHz.

#### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TPA6111A2	SOIC (8)	4.90 mm x 3.91 mm
	MSOP (8)	3.00 mm x 3.00 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

## 6 Pin Configuration and Functions

### Pin Functions

PIN		I/O	DESCRIPTION
NAME	NO.		
BYPASS	3	I	Tap to voltage divider for internal mid-supply bias supply. Connect to a 0.1- $\mu$ F to 1- $\mu$ F low ESR capacitor for best performance.
GND	4	I	GND is the ground connection.
IN1-	2	I	IN1- is the inverting input for channel 1.
IN2-	6	I	IN2- is the inverting input for channel 2.
SHUTDO WN	5	I	Puts the device in a low quiescent current mode when held high
V <sub>DD</sub>	8	I	V <sub>DD</sub> is the supply voltage terminal.
V <sub>O1</sub>	1	O	V <sub>O1</sub> is the audio output for channel 1.
V <sub>O2</sub>	7	O	V <sub>O2</sub> is the audio output for channel 2.

## 7 Specifications

### 7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) <sup>(1)</sup>

		MIN	MAX	UNIT
V <sub>DD</sub>	Supply voltage		6	V
V <sub>I</sub>	Input voltage	-0.3	V <sub>DD</sub> + 0.3	V
	Continuous total power dissipation	Internally Limited		
T <sub>J</sub>	Operating junction temperature	-40	150	°C
	Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds		260	°C
T <sub>stg</sub>	Storage temperature	-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

## 7.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±2000
		Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±1500

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

## 7.3 Recommended Operating Conditions

		MIN	MAX	UNIT
$V_{DD}$	Supply voltage	2.5	5.5	V
$T_A$	Operating free-air temperature	–40	85	°C
$V_{IH}$	High-level input voltage (SHUTDOWN)	60% × $V_{DD}$		V
$V_{IL}$	Low-level input voltage (SHUTDOWN)	25% × $V_{DD}$		V

## 7.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>	TPA6111A2		UNIT	
	D (SOIC)	DGN (MSOP)		
	8 PINS	8 PINS		
$R_{\theta JA}$	Junction-to-ambient thermal resistance	114.7	55.9	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	59.0	47.3	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	54.9	36.4	°C/W
$\psi_{JT}$	Junction-to-top characterization parameter	14.2	2.3	°C/W
$\psi_{JB}$	Junction-to-board characterization parameter	54.4	36.2	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	—	9.2	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

## 7.5 DC Electrical Characteristics, $V_{DD} = 3.3\text{ V}$

at  $V_{DD} = 3.3\text{ V}$ ,  $T_A = 25^\circ\text{C}$  (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT	
$V_{OO}$	Output offset voltage			10	mV	
PSRR	Power supply rejection ratio	$V_{DD} = 3.2\text{ V to } 3.4\text{ V}$		70	dB	
$I_{DD}$	Supply current	SHUTDOWN (pin 5) = 0 V		1.5	3	mA
$I_{DD(SD)}$	Supply current in shutdown mode	SHUTDOWN (pin 5) = $V_{DD}$		1	10	µA
$Z_i$	Input impedance		> 1		MΩ	

## 7.6 AC Operating Characteristics, $V_{DD} = 3.3\text{ V}$

$V_{DD} = 3.3\text{ V}$ ,  $T_A = 25^\circ\text{C}$ ,  $R_L = 16\ \Omega$

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
$P_O$	Output power (each channel)	THD ≤ 0.1%, f = 1 kHz		60	mW
THD+N	Total harmonic distortion + noise	$P_O = 40\text{ mW}$ , 20 Hz – 20 kHz		0.4%	
$B_{OM}$	Maximum output power BW	G = 20 dB, THD < 5%		> 20	kHz
	Phase margin	Open-loop		96°	
	Supply ripple rejection	f = 1 kHz, $C_{(BYP)} = 0.47\ \mu\text{F}$		71	dB
	Channel/channel output separation	f = 1 kHz, $P_O = 40\text{ mW}$		89	dB
SNR	Signal-to-noise ratio	$P_O = 50\text{ mW}$ , $A_V = 1$		100	dB
$V_n$	Noise output voltage	$A_V = 1$		11	µV(rms)

## 7.7 DC Electrical Characteristics, $V_{DD} = 5.5\text{ V}$

 $V_{DD} = 5.5\text{ V}$ ,  $T_A = 25^\circ\text{C}$ 

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$V_{OO}$	Output offset voltage				10	mV
PSRR	Power supply rejection ratio	$V_{DD} = 4.9\text{ V to } 5.1\text{ V}$		70		dB
$I_{DD}$	Supply current	SHUTDOWN (pin 5) = 0 V		1.6	3.2	mA
$I_{DD(SD)}$	Supply current in shutdown mode	SHUTDOWN (pin 5) = $V_{DD}$		1	10	$\mu\text{A}$
$ I_{IH} $	High-level input current (SHUTDOWN)	$V_{DD} = 5.5\text{ V}$ , $V_I = V_{DD}$			1	$\mu\text{A}$
$ I_{IL} $	Low-level input current (SHUTDOWN)	$V_{DD} = 5.5\text{ V}$ , $V_I = 0\text{ V}$			1	$\mu\text{A}$
$Z_i$	Input impedance			> 1		M $\Omega$

## 7.8 AC Operating Characteristics, $V_{DD} = 5.5\text{ V}$

 $V_{DD} = 5\text{ V}$ ,  $T_A = 25^\circ\text{C}$ ,  $R_L = 6\ \Omega$ 

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$P_O$	Output power (each channel)	THD $\leq 0.1\%$ , $f = 1\text{ kHz}$		150		mW
THD+N	Total harmonic distortion + noise	$P_O = 100\text{ mW}$ , 20 Hz – 20 kHz		0.6%		
$B_{OM}$	Maximum output power BW	G = 20 dB, THD < 5%		> 20		kHz
	Phase margin	Open-loop		96°		
	Supply ripple rejection	$f = 1\text{ kHz}$ , $C_{(BYP)} = 0.47\ \mu\text{F}$		61		dB
	Channel/channel output separation	$f = 1\text{ kHz}$ , $P_O = 100\text{ mW}$		90		dB
SNR	Signal-to-noise ratio	$P_O = 100\text{ mW}$ , $A_V = 1$		100		dB
$V_n$	Noise output voltage	$A_V = 1$		11.7		$\mu\text{V(rms)}$

## 7.9 AC Operating Characteristics, $V_{DD} = 3.3\text{ V}$

 $V_{DD} = 3.3\text{ V}$ ,  $T_A = 25^\circ\text{C}$ ,  $R_L = 32\ \Omega$ 

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$P_O$	Output power (each channel)	THD $\leq 0.1\%$ , $f = 1\text{ kHz}$		35		mW
THD+N	Total harmonic distortion + noise	$P_O = 40\text{ mW}$ , 20 Hz – 20 kHz		0.4%		
$B_{OM}$	Maximum output power BW	G = 20 dB, THD < 2%		> 20		kHz
	Phase margin	Open-loop		96°		
	Supply ripple rejection	$f = 1\text{ kHz}$ , $C_{(BYP)} = 0.47\ \mu\text{F}$		71		dB
	Channel/channel output separation	$f = 1\text{ kHz}$ , $P_O = 25\text{ mW}$		75		dB
SNR	Signal-to-noise ratio	$P_O = 90\text{ mW}$ , $A_V = 1$		100		dB
$V_n$	Noise output voltage	$A_V = 1$		11		$\mu\text{V(rms)}$

## 7.10 AC Operating Characteristics, $V_{DD} = 5\text{ V}$

 $V_{DD} = 5\text{ V}$ ,  $T_A = 25^\circ\text{C}$ ,  $R_L = 32\ \Omega$ 

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$P_O$	Output power (each channel)	THD $\leq 0.1\%$ , $f = 1\text{ kHz}$		90		mW
THD+N	Total harmonic distortion + noise	$P_O = 20\text{ mW}$ , 20 Hz – 20 kHz		2%		
$B_{OM}$	Maximum output power BW	G = 20 dB, THD < 2%		> 20		kHz
	Phase margin	Open-loop		97°		
	Supply ripple rejection	$f = 1\text{ kHz}$ , $C_{(BYP)} = 0.47\ \mu\text{F}$		61		dB
	Channel/channel output separation	$f = 1\text{ kHz}$ , $P_O = 65\text{ mW}$		98		dB
SNR	Signal-to-noise ratio	$P_O = 90\text{ mW}$ , $A_V = 1$		104		dB
$V_n$	Noise output voltage	$A_V = 1$		11.7		$\mu\text{V(rms)}$

## 8 Parameter Measurement Information

All parameters are measured according to the conditions described in the [Specifications](#) section.

## 9 Detailed Description

### 9.1 Overview

The TPA6111A2 device is a stereo audio power amplifier available in 8-pin SOIC and 8-pin MSOP packages. This device is able to deliver 150 mW of continuous RMS power per channel into 16-Ω loads. The gain of the amplifier is externally configured from 0 dB to 20 dB through two resistors per channel. The TPA6111A2 device is fully specified for operation at 3.3 V and 5 V, which makes this device ideal for PC and mobile applications.

### 9.2 Functional Block Diagram

### 9.3 Feature Description

#### 9.3.1 5-V Versus 3.3-V Operation

The TPA6111A2 was designed for operation over a supply range of 2.5 V to 5.5 V. This data sheet provides full specifications for 5-V and 3.3-V operation because these are considered to be the two most common standard voltages. There are no special considerations for 3.3-V versus 5-V operation as far as supply bypassing, gain setting, or stability. The most important consideration is that of output power. Each amplifier in the TPA6111A2 can produce a maximum voltage swing of  $V_{DD} - 1$  V. This means, for 3.3-V operation, clipping starts to occur when  $V_{O(PP)} = 2.3$  V as opposed when  $V_{O(PP)} = 4$  V while operating at 5 V. The reduced voltage swing subsequently reduces maximum output power into the load before distortion begins to become significant.

### 9.4 Device Functional Modes

The TPA6111A2 can be put in shutdown mode when asserting SHUTDOWN pin to a logic HIGH level. While in shutdown mode, the device is turned off, making the current consumption very low. The device exits shutdown mode when a LOW logic level is applied to SHUTDOWN pin.

## 10 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 10.1 Application Information

This typical connection diagram highlights the required external components and system level connections for proper operation of the device in popular use case. Any design variation can be supported by TI through schematic and layout reviews. Visit <http://e2e.ti.com> for design assistance and join the audio amplifier discussion forum for additional information.

### 10.2 Typical Application

Figure 35. Typical Application

#### 10.2.1 Design Requirements

Table 2 lists the design requirements of the TPA111A2.

Table 2. Design Requirements

DESIGN PARAMETER	EXAMPLE VALUE
Input voltage supply range	3.3 V to 5 V
Current	2 mA
Load impedance	16 $\Omega$

## 10.2.2 Detailed Design Procedure

### 10.2.2.1 Gain Setting Resistors, $R_F$ and $R_I$

The gain for the TPA6111A2 is set by resistors  $R_F$  and  $R_I$  according to [Equation 1](#).

$$\text{Gain} = -\left(\frac{R_F}{R_I}\right) \quad (1)$$

Given that the TPA6111A2 is a MOS amplifier, the input impedance is high. Consequently, input leakage currents are not generally a concern, although noise in the circuit increases as the value of  $R_F$  increases. In addition, a certain range of  $R_F$  values is required for proper start-up operation of the amplifier. Taken together, TI recommends that the effective impedance seen by the inverting node of the amplifier be set between 5 k $\Omega$  and 20 k $\Omega$ . The effective impedance is calculated in [Equation 2](#).

$$\text{Effective Impedance} = -\left(\frac{R_F R_I}{R_F + R_I}\right) \quad (2)$$

As an example, consider an input resistance of 20 k $\Omega$  and a feedback resistor of 20 k $\Omega$ . The gain of the amplifier would be  $-1$  and the effective impedance at the inverting terminal would be 10 k $\Omega$ , which is within the recommended range.

For high-performance applications, metal film resistors are recommended because they tend to have lower noise levels than carbon resistors. For values of  $R_F$  above 50 k $\Omega$ , the amplifier tends to become unstable due to a pole formed from  $R_F$  and the inherent input capacitance of the MOS input structure. For this reason, a small compensation capacitor of approximately 5 pF must be placed in parallel with  $R_F$ . In effect, this creates a low-pass filter network with the cutoff frequency defined in [Equation 3](#).

$$f_{c(\text{lowpass})} = \frac{1}{2\pi R_F C_F} \quad (3)$$

For example, if  $R_F$  is 100 k $\Omega$  and  $C_F$  is 5 pF, then  $f_{c(\text{lowpass})}$  is 318 kHz, which is well outside the audio range.

### 10.2.2.2 Input Capacitor, $C_I$

In the typical application, input capacitor  $C_I$  is required to allow the amplifier to bias the input signal to the proper DC level for optimum operation. In this case,  $C_I$  and  $R_I$  form a high-pass filter with the corner frequency determined in [Equation 4](#).

$$f_{c(\text{highpass})} = \frac{1}{2\pi R_I C_I} \quad (4)$$

The value of  $C_I$  is important to consider, as it directly affects the bass (low-frequency) performance of the circuit. Consider the example where  $R_I$  is 20 k $\Omega$  and the specification calls for a flat bass response down to 20 Hz. [Equation 4](#) is reconfigured as [Equation 5](#).

$$C_I = \frac{1}{2\pi R_I f_{c(\text{highpass})}} \quad (5)$$

In this example,  $C_I$  is 0.40  $\mu\text{F}$ , so TI recommends choosing a value in the range of 0.47  $\mu\text{F}$  to 1  $\mu\text{F}$ . A further consideration for this capacitor is the leakage path from the input source through the input network ( $R_I$ ,  $C_I$ ) and the feedback resistor ( $R_F$ ) to the load. This leakage current creates a DC offset voltage at the input to the amplifier that reduces useful headroom, especially in high-gain applications ( $> 10$ ). For this reason a low-leakage tantalum or ceramic capacitor is the best choice. When polarized capacitors are used, the positive side of the capacitor must face the amplifier input in most applications, as the DC level there is held at  $V_{DD}/2$ , which is likely higher than the source DC level.

---

#### NOTE

It is important to confirm the capacitor polarity in the application.

---

### 10.2.2.3 Power Supply Decoupling, $C_{(S)}$

The TPA6111A2 is a high-performance CMOS audio amplifier that requires adequate power supply decoupling to ensure that the output total harmonic distortion (THD) is as low as possible. Power supply decoupling also prevents oscillations for long lead lengths between the amplifier and the speaker. The optimum decoupling is achieved by using two capacitors of different types that target different types of noise on the power supply leads. For higher frequency transients, spikes, or digital hash on the line, a good low equivalent-series-resistance (ESR) ceramic capacitor, typically 0.1  $\mu\text{F}$ , placed as close as possible to the device  $V_{\text{DD}}$  lead, works best. For filtering lower frequency noise signals, a larger aluminum electrolytic capacitor of 10  $\mu\text{F}$  or greater placed near the power amplifier is recommended.

### 10.2.2.4 Midrail Bypass Capacitor, $C_{(BYP)}$

The midrail bypass capacitor,  $C_{(BYP)}$ , serves several important functions. During start-up,  $C_{(BYP)}$  determines the rate at which the amplifier starts up. This helps to push the start-up pop noise into the subaudible range (so low it cannot be heard). The second function is to reduce noise produced by the power supply caused by coupling into the output drive signal. This noise is from the midrail generation circuit internal to the amplifier. The capacitor is fed from a 230-k $\Omega$  source inside the amplifier. To keep the start-up pop as low as possible, the relationship shown in Equation 6 must be maintained.

$$\frac{1}{(C_{(BYP)} \times 230 \text{ k}\Omega)} \leq \frac{1}{(C_I R_I)} \quad (6)$$

As an example, consider a circuit where  $C_{(BYP)}$  is 1  $\mu\text{F}$ ,  $C_I$  is 1  $\mu\text{F}$ , and  $R_I$  is 20 k $\Omega$ . Inserting these values into Equation 6 results in:  $6.25 \leq 50$  which satisfies the rule. Recommended values for bypass capacitor  $C_{(BYP)}$  are 0.1- $\mu\text{F}$  to 1- $\mu\text{F}$ , ceramic or tantalum low-ESR, for the best THD and noise performance.

### 10.2.2.5 Output Coupling Capacitor, $C_{(C)}$

In the typical single-supply single-ended (SE) configuration, an output coupling capacitor ( $C_{(C)}$ ) is required to block the DC bias at the output of the amplifier, thus preventing DC currents in the load. As with the input coupling capacitor, the output coupling capacitor and impedance of the load form a high-pass filter governed by Equation 7.

$$f_c = \frac{1}{2\pi R_L C_{(C)}} \quad (7)$$

The main disadvantage, from a performance standpoint, is that the typically small load impedances drive the low-frequency corner higher. Large values of  $C_{(C)}$  are required to pass low frequencies into the load. Consider the example where a  $C_{(C)}$  of 68  $\mu\text{F}$  is chosen and loads vary from 32  $\Omega$  to 47 k $\Omega$ . Table 3 summarizes the frequency response characteristics of each configuration.

**Table 3. Common Load Impedances vs Low Frequency Output Characteristics in SE Mode**

$R_L$	$C_C$	LOWEST FREQUENCY
32 $\Omega$	68 $\mu\text{F}$	73 Hz
10,000 $\Omega$	68 $\mu\text{F}$	0.23 Hz
47,000 $\Omega$	68 $\mu\text{F}$	0.05 Hz

As Table 3 indicates, headphone response is adequate and drive into line level inputs (a home stereo for example) is good.

The output coupling capacitor required in single-supply SE mode also places additional constraints on the selection of other components in the amplifier circuit. With the rules described earlier still valid, add the following relationship in Equation 8:

$$\frac{1}{(C_{(BYP)} \times 230 \text{ k}\Omega)} \leq \frac{1}{(C_I R_I)} \leq \frac{1}{R_L C_{(C)}} \quad (8)$$

### 10.2.2.6 Using Low-ESR Capacitors

Low-ESR capacitors are recommended throughout this application. A real capacitor can be modeled simply as a resistor in series with an ideal capacitor. The voltage drop across this resistor minimizes the beneficial effects of the capacitor in the circuit. The lower the equivalent value of this resistance, the more the real capacitor behaves like an ideal capacitor.

### 10.2.3 Application Curves

The characteristics of this design are shown in [Table 4](#) from the *Typical Characteristics* section.

**Table 4. Table of Graphs**

		FIGURE
THD+N Total harmonic distortion plus noise	vs Frequency	<a href="#">Figure 11</a>
	vs Output power	<a href="#">Figure 12</a>

## 11 Power Supply Recommendations

The device is designed to operate from an input voltage supply of 3.3 V and 5 V. Therefore, the output voltage range of power supply must be within this range and well regulated. Ti recommends placing decoupling capacitors in every voltage source pin. Place these decoupling capacitors as close as possible to the TPA6111A2.

## 12 Layout

### 12.1 Layout Guidelines

Solder the exposed metal pad on the TPA6111A2 DGN package to the PCB. The pad on the PCB may be grounded or may be allowed to float (not be connected to ground or power). If the pad is grounded, it must be connected to the same ground as the GND pin (4). See the layout and mechanical drawings in [Mechanical, Packaging, and Orderable Information](#) for proper sizing. Soldering the thermal pad improves mechanical reliability, improves grounding of the device, and enhances thermal conductivity of the package.

### 12.2 Layout Examples

Figure 36. TPA6111A2 MSOP Layout Example

**Layout Examples (continued)**

- |  |  |
|--|--|
|  Ground Plane         |  Top Layer Traces     |
|  Pad to Ground Plane  |  Thermal Pad          |
|  Via to Ground Plane |  Via to Power Supply |

## 13 Device and Documentation Support

### 13.1 Documentation Support

#### 13.1.1 Related Documentation

For related documentation, see the following:

*PowerPAD Thermally Enhanced Package Application Report* ([SLMA002](#))

### 13.2 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

**TI E2E™ Online Community** *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At [e2e.ti.com](#), you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

**Design Support** *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

### 13.3 Trademarks

PowerPAD, E2E are trademarks of Texas Instruments.  
All other trademarks are the property of their respective owners.

### 13.4 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

### 13.5 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

## 14 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

## PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

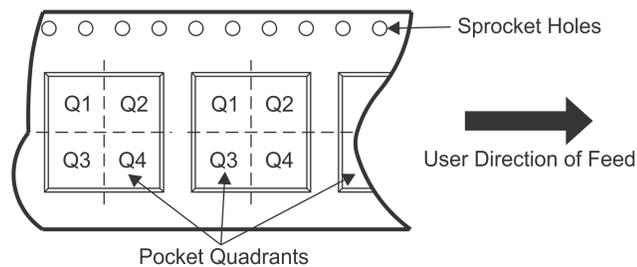

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

DGN (S-PDSO-G8)

PowerPAD™ PLASTIC SMALL OUTLINE

## THERMAL INFORMATION

This PowerPAD™ package incorporates an exposed thermal pad that is designed to be attached to a printed circuit board (PCB). The thermal pad must be soldered directly to the PCB. After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For additional information on the PowerPAD package and how to take advantage of its heat dissipating abilities, refer to Technical Brief, PowerPAD Thermally Enhanced Package, Texas Instruments Literature No. SLMA002 and Application Brief, PowerPAD Made Easy, Texas Instruments Literature No. SLMA004. Both documents are available at [www.ti.com](http://www.ti.com).

The exposed thermal pad dimensions for this package are shown in the following illustration.

Exposed Thermal Pad Dimensions

NOTE: All linear dimensions are in millimeters

PowerPAD is a trademark of Texas Instruments

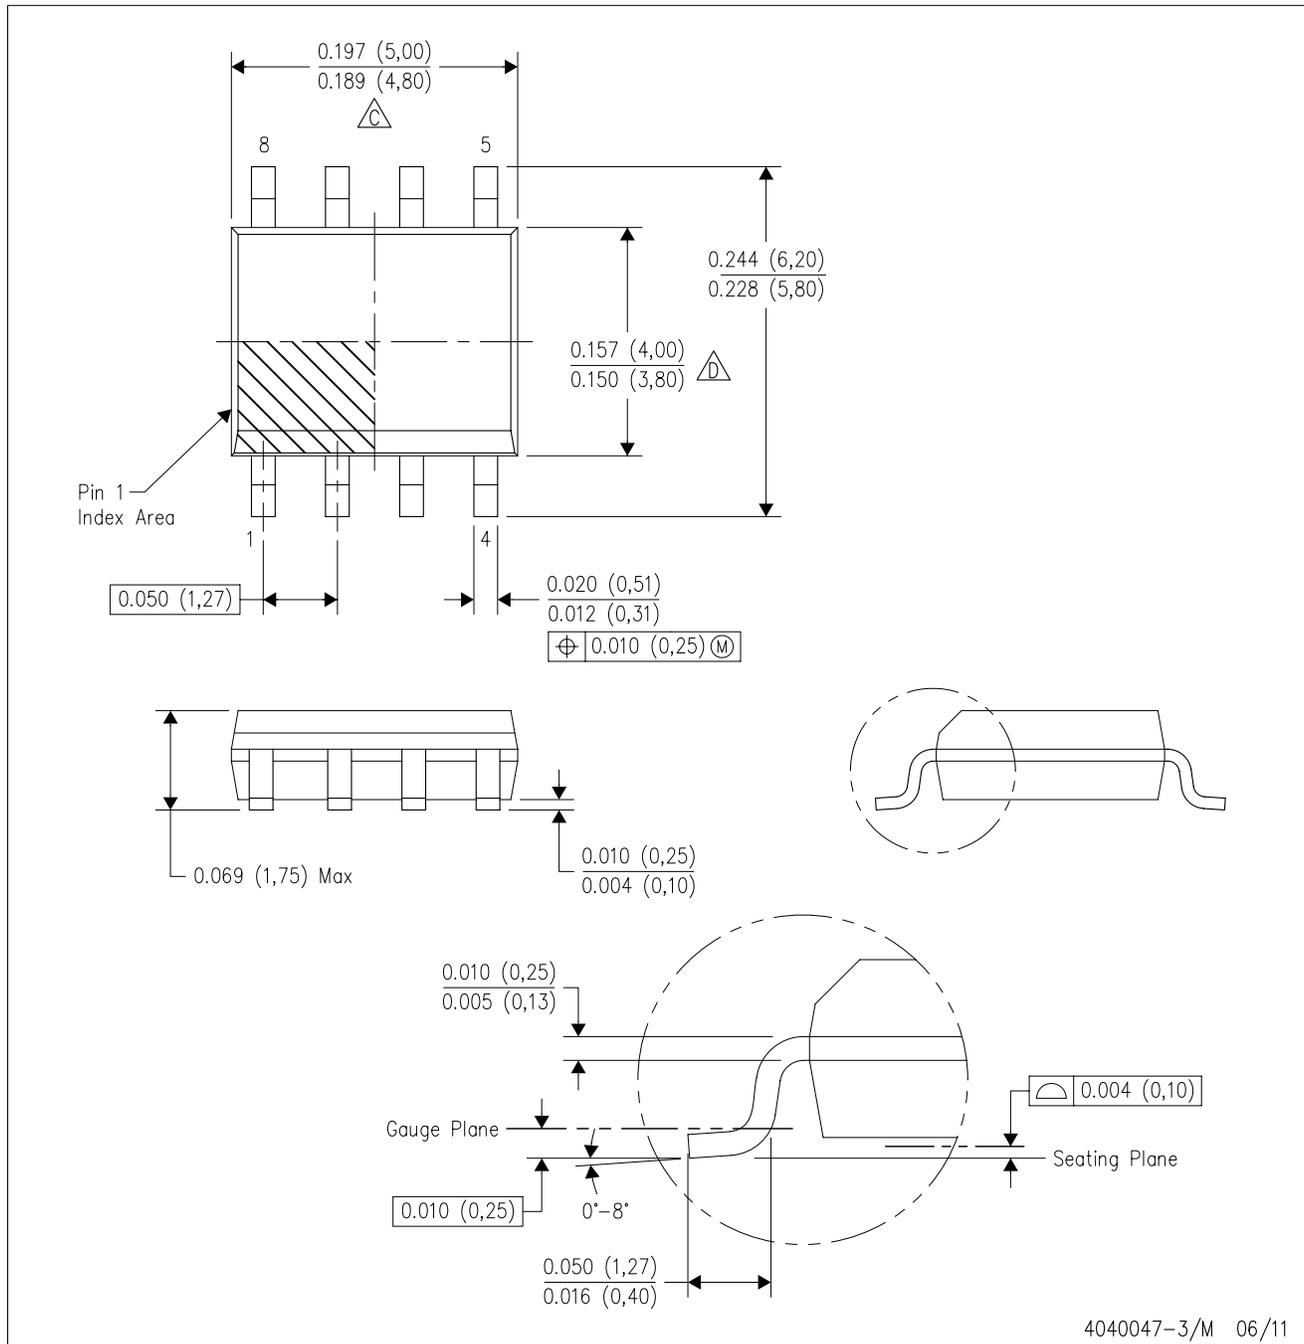

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
  - D. This package is designed to be soldered to a thermal pad on the board. Refer to Technical Brief, PowerPad Thermally Enhanced Package, Texas Instruments Literature No. SLMA002, SLMA004, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at [www.ti.com](http://www.ti.com) <<http://www.ti.com>>.
  - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.
  - F. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

PowerPAD is a trademark of Texas Instruments

D (R-PDSO-G8)

PLASTIC SMALL OUTLINE

- NOTES:

  - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
