\*1. The letter "d" indicates the distance between the top surface of the sensor and the sensing object.

- \*1. The letter *d* indicates the distance between the top surface of the sensor and the sensing object.
- \*2. Depends on the installed condition of the Photomicrosensor, the detector may receive the sensor's LED light and/or the external light which is reflected from surroundings of the Photomicrosensor and/or the background object.

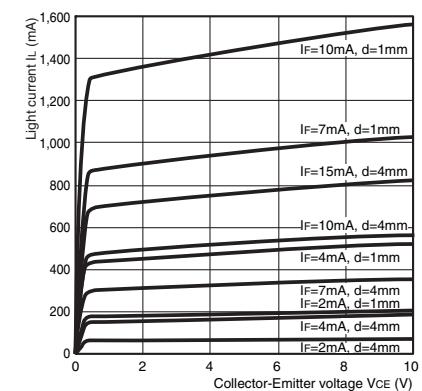

Please confirm the condition of the Photomicrosensor by actual intended application prior to the mass production use.
