

## PGA2310 Stereo Audio Volume Control

### 1 Features

- Digitally-Controlled Analog Volume Control:
  - Two Independent Audio Channels
  - Serial Control Interface
  - Zero Crossing Detection
  - Mute Function
- Wide Gain and Attenuation Range: 31.5 dB to –95.5 dB With 0.5-dB Steps
- Low Noise and Distortion:
  - 120-dB Dynamic Range
  - 0.0004% THD+N at 1 kHz
- Low Interchannel Crosstalk: –126 dBFS
- Noise-Free Level Transitions
- Power Supplies: 15-V Analog, 5-V Digital
- Available in DIP–16 and SOL–16 Packages
- Pin and Software Compatible With the PGA2311 and Cirrus Logic CS3310™

### 2 Applications

- Audio Amplifiers
- Mixing Consoles
- Multi-Track Recorders
- Broadcast Studio Equipment
- Musical Instruments
- Effects Processors
- A/V Receivers
- Car Audio Systems

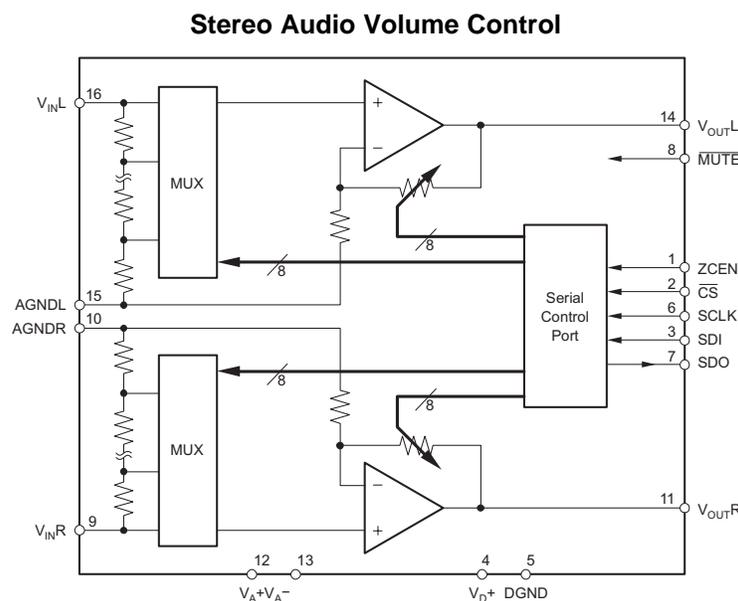

### 3 Description

The PGA2310 is a high-performance, stereo audio volume control designed for professional and high-end consumer audio systems. The ability to operate from  $\pm 15\text{-V}$  analog power supplies enables the PGA2310 to process input signals with large voltage swings, thereby preserving the dynamic range available in the overall signal path. Using high performance operational amplifier stages internal to the PGA2310 yields low noise and distortion, while providing the capability to drive  $600\text{-}\Omega$  loads directly without buffering. The three-wire serial control interface allows for connection to a wide variety of host controllers, in addition to support for daisy-chaining multiple PGA2310 devices.

#### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
PGA2310	SOIC (16)	7.50 mm × 10.30 mm
	PDIP (16)	6.35 mm × 19.30 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

## 5 Pin Configuration and Functions

### Pin Functions

PIN		I/O	DESCRIPTION
NO.	NAME		
1	ZCEN	I	Zero Crossing Enable Input (Active High)
2	$\overline{\text{CS}}$	I	Chip Select Input (Active Low)
3	SDI	I	Serial Data Input
4	$V_{D+}$	I	Digital Power Supply, 5 V
5	DGND	—	Digital Ground
6	SCLK	I	Serial Clock Input
7	SDO	O	Serial Data Output
8	$\overline{\text{MUTE}}$	I	Mute Control Input (Active Low)
9	$V_{INR}$	I	Analog Input, Right Channel
10	AGNDR	—	Analog Ground, Right Channel
11	$V_{OUTR}$	O	Analog Output, Right Channel
12	$V_{A+}$	I	Analog Power Supply, 15 V
13	$V_{A-}$	I	Analog Power Supply, -15 V
14	$V_{OUTL}$	O	Analog Output, Left Channel
15	AGNDL	—	Analog Ground, Left Channel
16	$V_{INL}$	I	Analog Input, Left Channel

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) <sup>(1)</sup>

		MIN	MAX	UNIT
Supply Voltage	V <sub>A+</sub>		16	V
	V <sub>A-</sub>		-16	
	V <sub>D+</sub>		6.5	
Analog input voltage		0	V <sub>A+</sub> , V <sub>A-</sub>	V
Digital input voltage		-0.3	V <sub>D+</sub>	V
Operating temperature		-55	125	°C
Junction temperature			150	°C
Lead temperature (soldering, 10 s)			300	°C
Package temperature (IR, reflow, 10 s)			235	°C
T <sub>stg</sub>	Storage temperature	-65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### 6.2 ESD Ratings

			VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±4000	V

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V <sub>A+</sub>	Positive analog power supply	4.5	15	15.5	V
V <sub>A-</sub>	Negative analog power supply	-4.5	-15	-15.5	V
V <sub>D+</sub>	Digital power supply	4.5	5	5.5	V
Operating temperature		-55	25	125	°C

### 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		PGA2310		UNIT
		D (SOIC)	P (PDIP)	
		16 PINS	16 PINS	
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	83	39.9	°C/W
R <sub>θJC(top)</sub>	Junction-to-case (top) thermal resistance	44	26.2	°C/W
R <sub>θJB</sub>	Junction-to-board thermal resistance	40.5	20.1	°C/W
ψ <sub>JT</sub>	Junction-to-top characterization parameter	11.5	10.7	°C/W
ψ <sub>JB</sub>	Junction-to-board characterization parameter	40.2	19.9	°C/W
R <sub>θJC(bot)</sub>	Junction-to-case (bottom) thermal resistance	N/A	N/A	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](http://www.ti.com/lit/zip/SRA953).

## 6.5 Electrical Characteristics

At  $T_A = 25^\circ\text{C}$ ,  $V_{A+} = 15\text{ V}$ ,  $V_{A-} = -15\text{ V}$ ,  $V_{D+} = 5\text{ V}$ ,  $R_L = 100\text{ k}\Omega$ ,  $C_L = 20\text{ pF}$ , BW measure = 10 Hz to 20 kHz, unless otherwise noted.

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>DC CHARACTERISTICS</b>

Quiescent Current	$I_{A+}$	$V_{A+} = 15\text{ V}$		7.5	10	mA
	$I_{A-}$	$V_{A-} = -15\text{ V}$		7.7	10	
	$I_{D+}$	$V_{D+} = 5\text{ V}$		0.8	1.5	

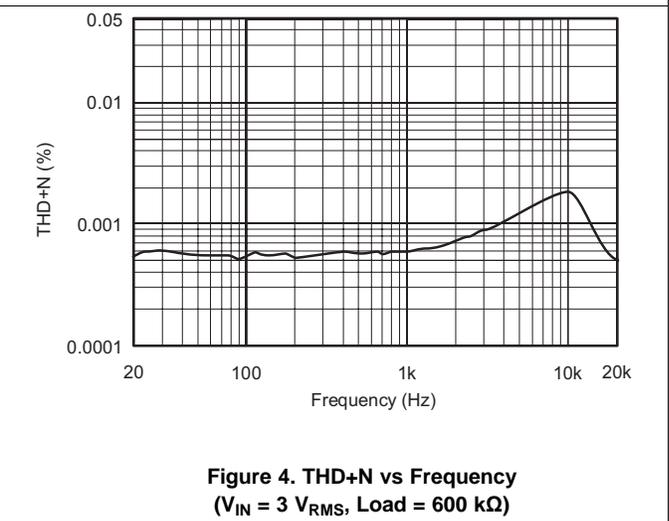

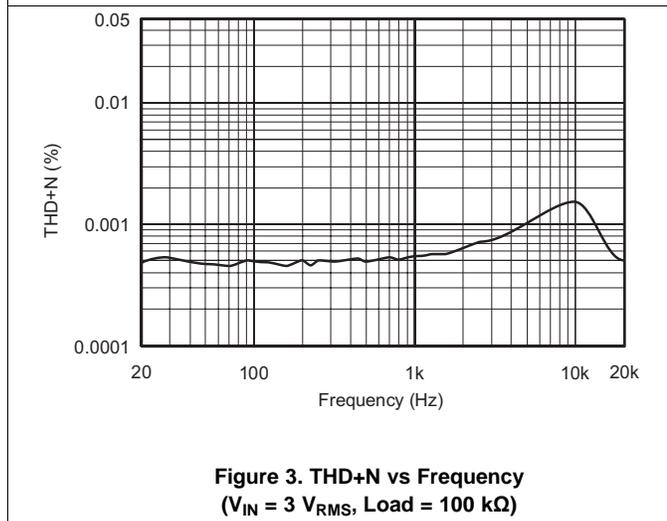

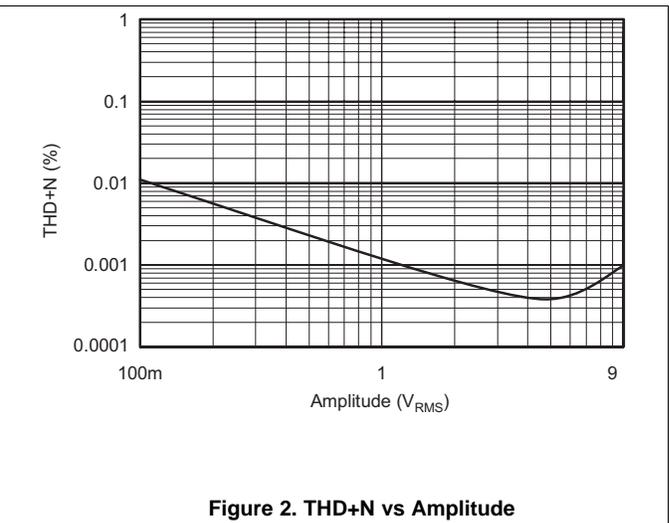

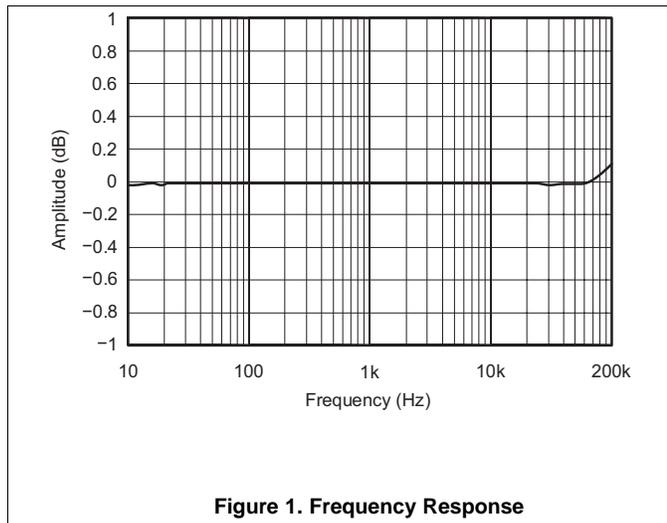

### Electrical Characteristics (continued)

At  $T_A = 25^\circ\text{C}$ ,  $V_{A+} = 15\text{ V}$ ,  $V_{A-} = -15\text{ V}$ ,  $V_{D+} = 5\text{ V}$ ,  $R_L = 100\text{ k}\Omega$ ,  $C_L = 20\text{ pF}$ , BW measure = 10 Hz to 20 kHz, unless otherwise noted.

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>TEMPERATURE RANGE</b>					
Specified Range		-40		85	$^\circ\text{C}$
Operating Range		-55		125	$^\circ\text{C}$

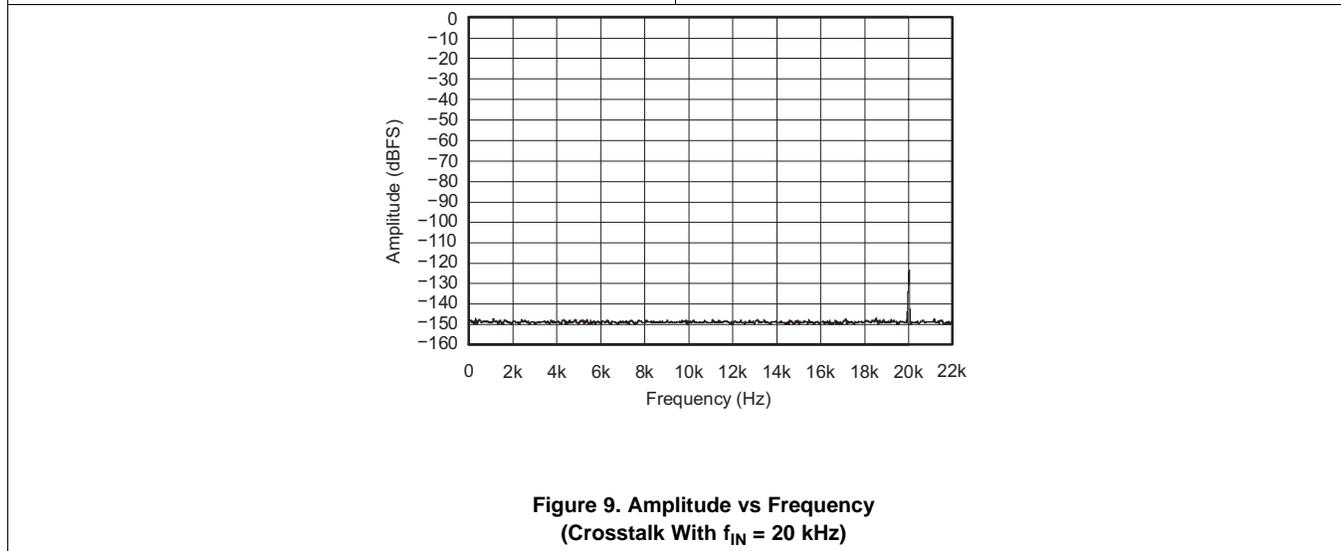

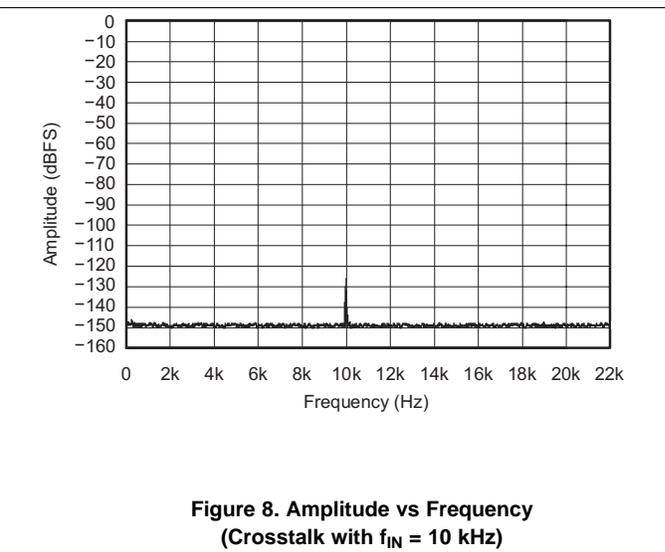

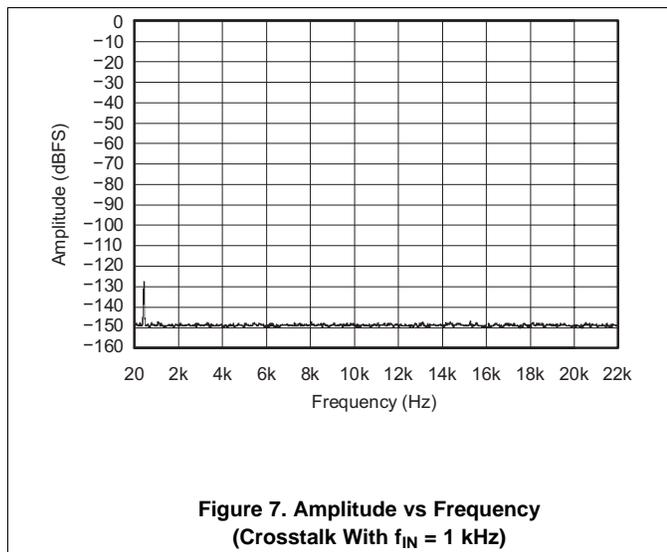

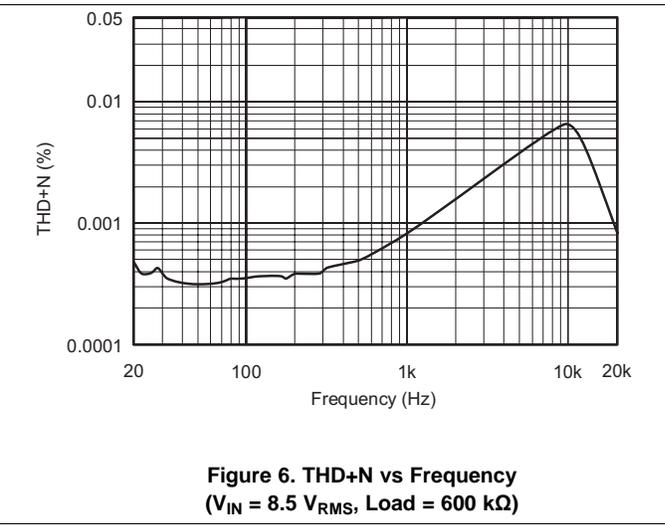

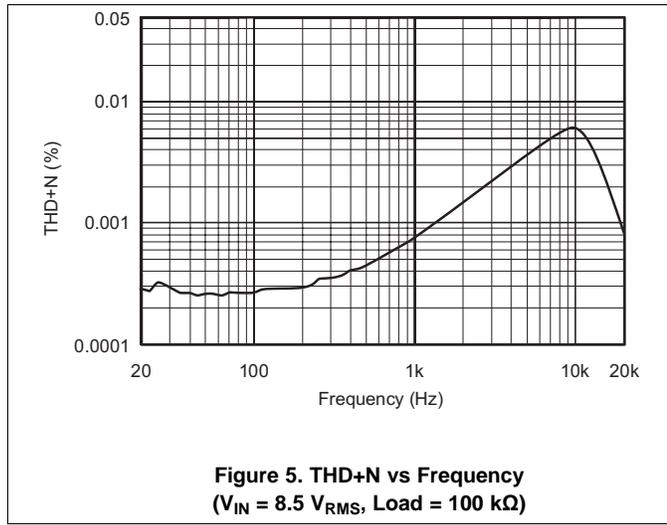

### 6.6 Typical Characteristics

At  $T_A = 25^\circ\text{C}$ ,  $V_{A+} = 15\text{ V}$ ,  $V_{A-} = -15\text{ V}$ ,  $V_{D+} = 5\text{ V}$ ,  $R_L = 100\text{ k}\Omega$ ,  $C_L = 20\text{ pF}$ , BW measure = 10 Hz to 20 kHz, unless otherwise noted.

**Typical Characteristics (continued)**

At  $T_A = 25^\circ\text{C}$ ,  $V_{A+} = 15\text{ V}$ ,  $V_{A-} = -15\text{ V}$ ,  $V_{D+} = 5\text{ V}$ ,  $R_L = 100\text{ k}\Omega$ ,  $C_L = 20\text{ pF}$ , BW measure = 10 Hz to 20 kHz, unless otherwise noted.

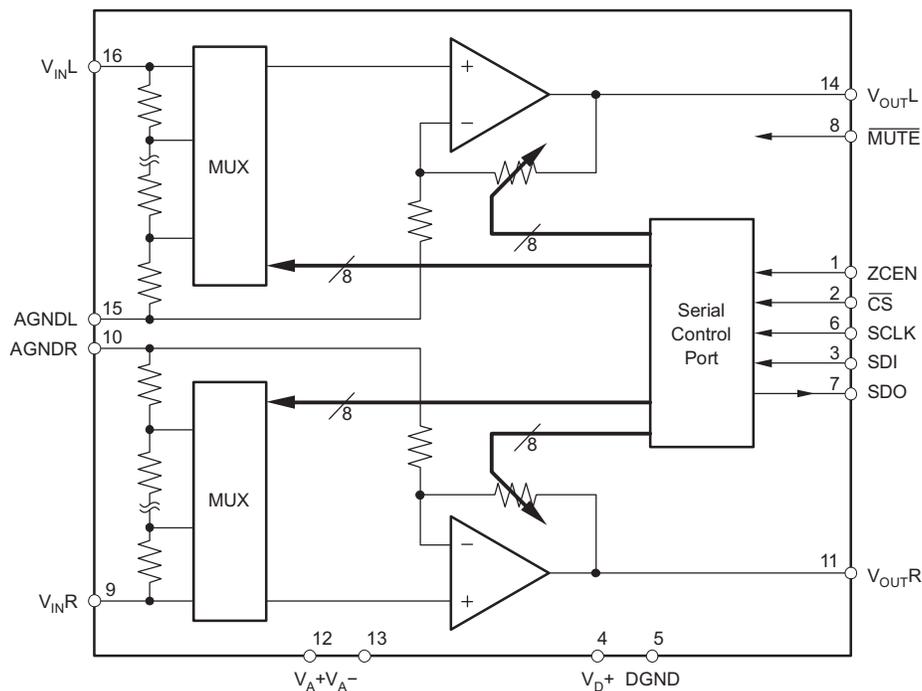

## 7 Detailed Description

### 7.1 Overview

The PGA2310 is a stereo audio volume control that can be used in a wide array of professional and consumer audio equipment. The PGA2310 is fabricated in a mixed-signal BiCMOS process for superior analog characteristics.

The heart of the PGA2310 is a resistor network, an analog switch array, and a high-performance bipolar op amp stage. The switches select taps in the resistor network that determine the gain of the amplifier stage. Switch selections are programmed using a serial control port. The serial port allows connection to a wide variety of host controllers.

### 7.2 Functional Block Diagram

### 7.3 Feature Description

#### 7.3.1 Analog Inputs and Outputs

The PGA2310 includes two independent channels, referred to as the left and right channels. Each channel has a corresponding input and output pin. The input and output pins are unbalanced, or referenced to analog ground (either AGNDL or AGNDR). The inputs are  $V_{INR}$  (pin 9) and  $V_{INL}$  (pin 16), while the outputs are  $V_{OUTR}$  (pin 11) and  $V_{OUTL}$  (pin 14).

The input and output pins may swing within 1.5 V of the analog power supplies,  $V_{A+}$  (pin 12) and  $V_{A-}$  (pin 13). Given  $V_{A+} = 15\text{ V}$  and  $V_{A-} = -15\text{ V}$ , the maximum input or output voltage range is 27  $V_{PP}$ .

Drive the PGA2310 with a low source impedance. If a source impedance of greater than 600  $\Omega$  is used, the distortion performance of the PGA2310 begins to degrade.

#### 7.3.2 Serial Control Port

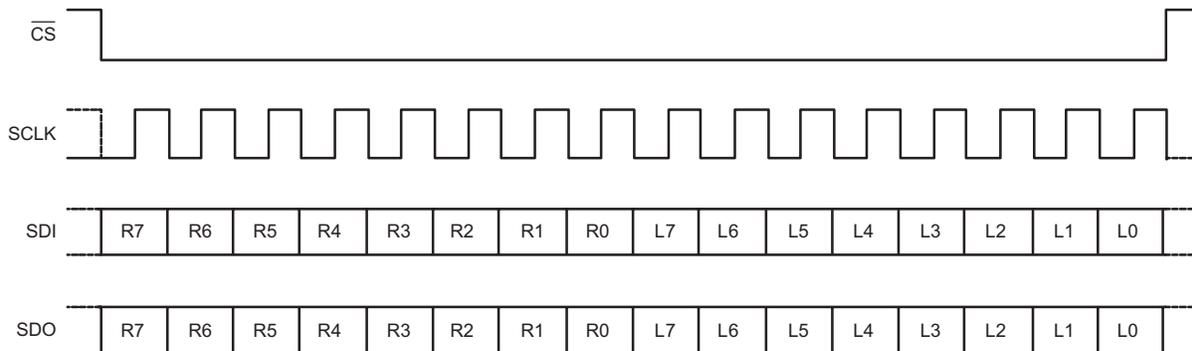

The serial control port is used to program the gain settings for the PGA2310. The serial control port includes three input pins and one output pin. The inputs include  $\overline{CS}$  (pin 2), SDI (pin 3), and SCLK (pin 6). The sole output pin is SDO (pin 7).

**Feature Description (continued)**

The  $\overline{CS}$  pin functions as the chip select input. Data may be written to the PGA2310 only when  $\overline{CS}$  is low. SDI is the serial data input pin. Control data is provided as a 16-bit word at the SDI pin, 8 bits each for the left and right channel gain settings. Data is formatted as MSB first, in straight binary code. SCLK is the serial clock input. Data is clocked into SDI on the rising edge of SCLK.

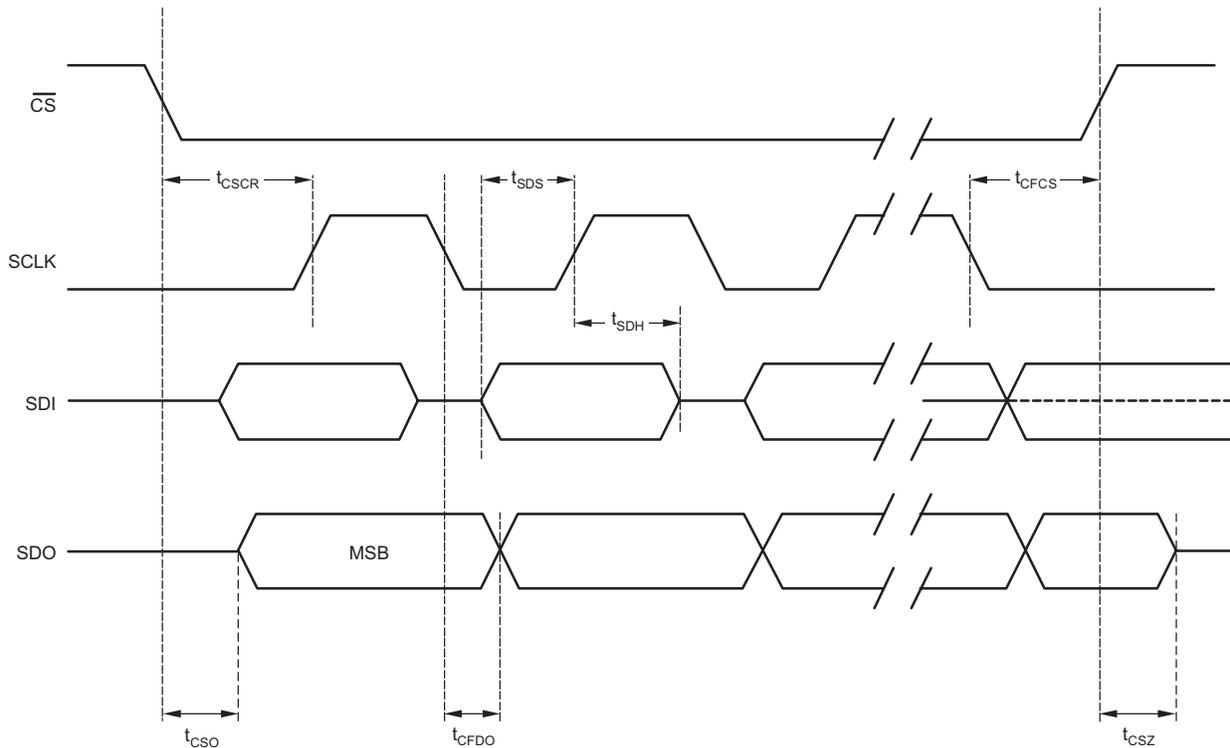

SDO is the serial data output pin, and used when daisy-chaining multiple PGA2310 devices. Daisy-chain operation is described in [Daisy-Chaining Multiple PGA2310 Devices](#). SDO is a tristate output, and assumes a high impedance state when  $\overline{CS}$  is high.

The protocol for the serial control port is shown in [Figure 10](#). [Figure 11](#) shows detailed timing specifications of the serial control port.

Gain Byte Format is MSB First, Straight Binary  
R0 is the Least Significant Bit of the Right Channel Gain Byte  
R7 is the Most Significant Bit of the Right Channel Gain Byte  
L0 is the Least Significant Bit of the Left Channel Gain Byte  
L7 is the Most Significant Bit of the Left Channel Gain Byte  
SDI is latched on the rising edge of SCLK.  
SDO transitions on the falling edge of SCLK.

**Figure 10. Serial Interface Protocol**

**Feature Description (continued)**

**Figure 11. Serial Interface Timing Requirements**
**7.3.3 Gain Settings**

The gain for each channel is set by its corresponding 8-bit code, either R[7:0] or L[7:0] (see [Figure 10](#)). The gain code data is straight binary format. If N equals the decimal equivalent of R[7:0] or L[7:0], then the following relationships exist for the gain settings:

- **For N = 0:** Mute Condition. The input multiplexer is connected to analog ground (AGNDR or AGNDL).
- **For N = 1 to 255:** Gain (dB) =  $31.5 - [0.5 \cdot (255 - N)]$

This results in a gain range of 31.5 dB (with N = 255) to -95.5 dB (with N = 1).

Changes in gain setting may be made with or without zero crossing detection. The operation of the zero crossing detector and time-out circuitry is discussed in [Zero Crossing Detection](#).

**7.3.4 Daisy-Chaining Multiple PGA2310 Devices**

To reduce the number of control signals required to support multiple PGA2310 devices on a printed-circuit-board, the serial control port supports daisy-chaining of multiple PGA2310 devices. [Figure 12](#) shows the connection requirements for daisy-chain operation. This arrangement allows a three-wire serial interface to control many PGA2310 devices.

## Feature Description (continued)

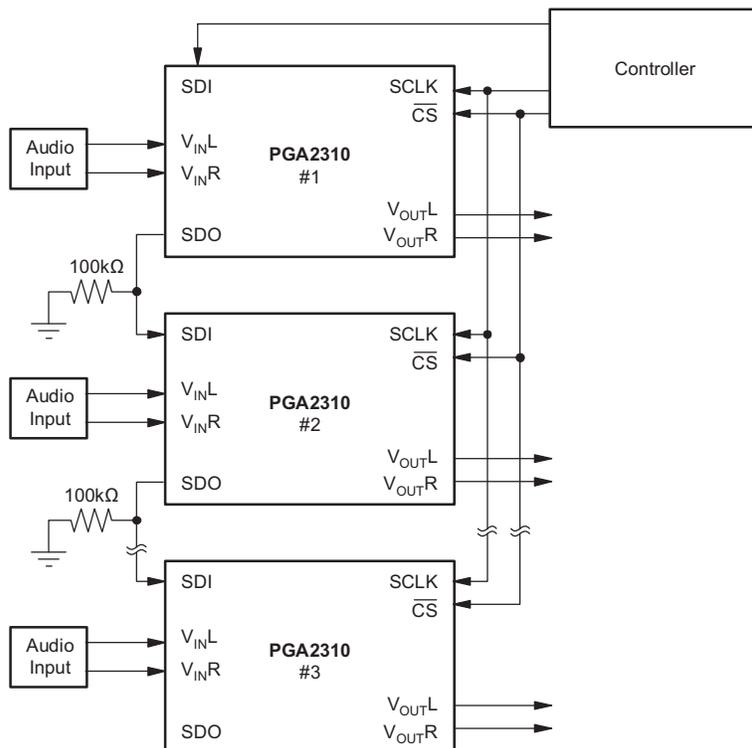

Figure 12. Daisy-Chaining Multiple PGA2310 Devices

As shown in Figure 12, the SDO pin from device 1 is connected to the SDI input of device 2, and is repeated for additional devices. This in turn forms a large shift register, in which gain data may be written for all PGA2310s connected to the serial bus. The length of the shift register is  $16 \times N$  bits, where  $N$  is equal to the number of PGA2310 devices included in the chain. The CS input must remain low for  $16 \times N$  SCLK periods, where  $N$  is the number of devices connected in the chain, to allow enough SCLK cycles to load all devices.

### 7.3.5 Zero Crossing Detection

The PGA2310 includes a zero crossing detection function that can provide for noise-free level transitions. The concept is to change gain settings on a zero crossing of the input signal, thus minimizing audible glitches. This function is enabled or disabled using the ZCEN input (pin 1). When ZCEN is low, zero crossing detection is disabled. When ZCEN is high, zero crossing detection is enabled.

The zero crossing detection takes effect with a change in gain setting for a corresponding channel. The new gain setting is not latched until either two zero crossings are detected, or a time-out period of 16 ms has elapsed without detecting two zero crossings. In the case of a time-out, the new gain setting takes effect with no attempt to minimize audible artifacts.

### 7.3.6 Mute Function

The PGA2310 includes a mute function. This function may be activated by either the  $\overline{\text{MUTE}}$  input (pin 8), or by setting the gain byte value for one or both channels to  $00_{\text{HEX}}$ . The  $\overline{\text{MUTE}}$  pin may be used to mute both channels, while the gain setting may be used to selectively mute the left and right channels. Muting is accomplished by switching the input multiplexer to analog ground (AGNDR or AGNDL) with zero crossing enabled.

The  $\overline{\text{MUTE}}$  pin is active low. When  $\overline{\text{MUTE}}$  is low, each channel is muted following the next zero crossing event or time-out that occurs on that channel. If  $\overline{\text{MUTE}}$  becomes active while  $\overline{\text{CS}}$  is also active, the mute takes effect once the  $\overline{\text{CS}}$  pin goes high. When the  $\overline{\text{MUTE}}$  pin is high, the PGA2310 operates normally, with the mute function disabled.

## 7.4 Device Functional Modes

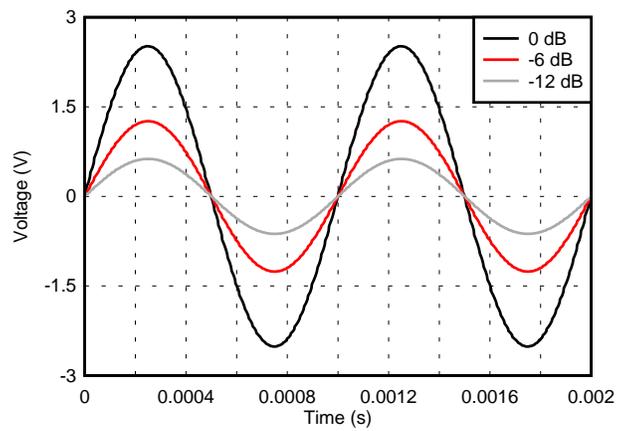

### 7.4.1 Power-Up State

On power up, all internal flip-flops are reset. The gain byte value for both the left and right channels are set to 00<sub>HEX</sub>, or mute condition. The gain remains at this setting until the host controller programs new settings for each channel using the serial control port.

**Typical Application (continued)**

**8.2.3 Application Curve**

**Figure 14. PGA2310 Operating at 0 dB, -6 dB and -12 dB**

## 9 Power Supply Recommendations

The PGA2310 is specified for operation with its analog power supplies ranging from  $\pm 4.5$  V to  $\pm 15.5$  V and its digital power supply ranging from 4.5 V to 5.5 V.

## 10 Layout

### 10.1 Layout Guidelines

TI recommends that the ground planes for the digital and analog sections of the printed-circuit-board (PCB) be separate from one another. The planes should be connected at a single point. Figure 15 shows the recommended PCB floor plan for the PGA2310.

The PGA2310 is mounted so that it straddles the split between the digital and analog ground planes. Pins 1 through 8 are oriented to the digital side of the board, while pins 9 through 16 are on the analog side of the board.

### 10.2 Layout Example

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

<sup>(6)</sup> Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. - NOTES:
- A. All linear dimensions are in inches (millimeters).
  - B. This drawing is subject to change without notice.
  - Falls within JEDEC MS-001, except 18 and 20 pin minimum body length (Dim A).
  - The 20 pin end lead shoulder width is a vendor option, either half or full width.

DW (R-PDSO-G16)

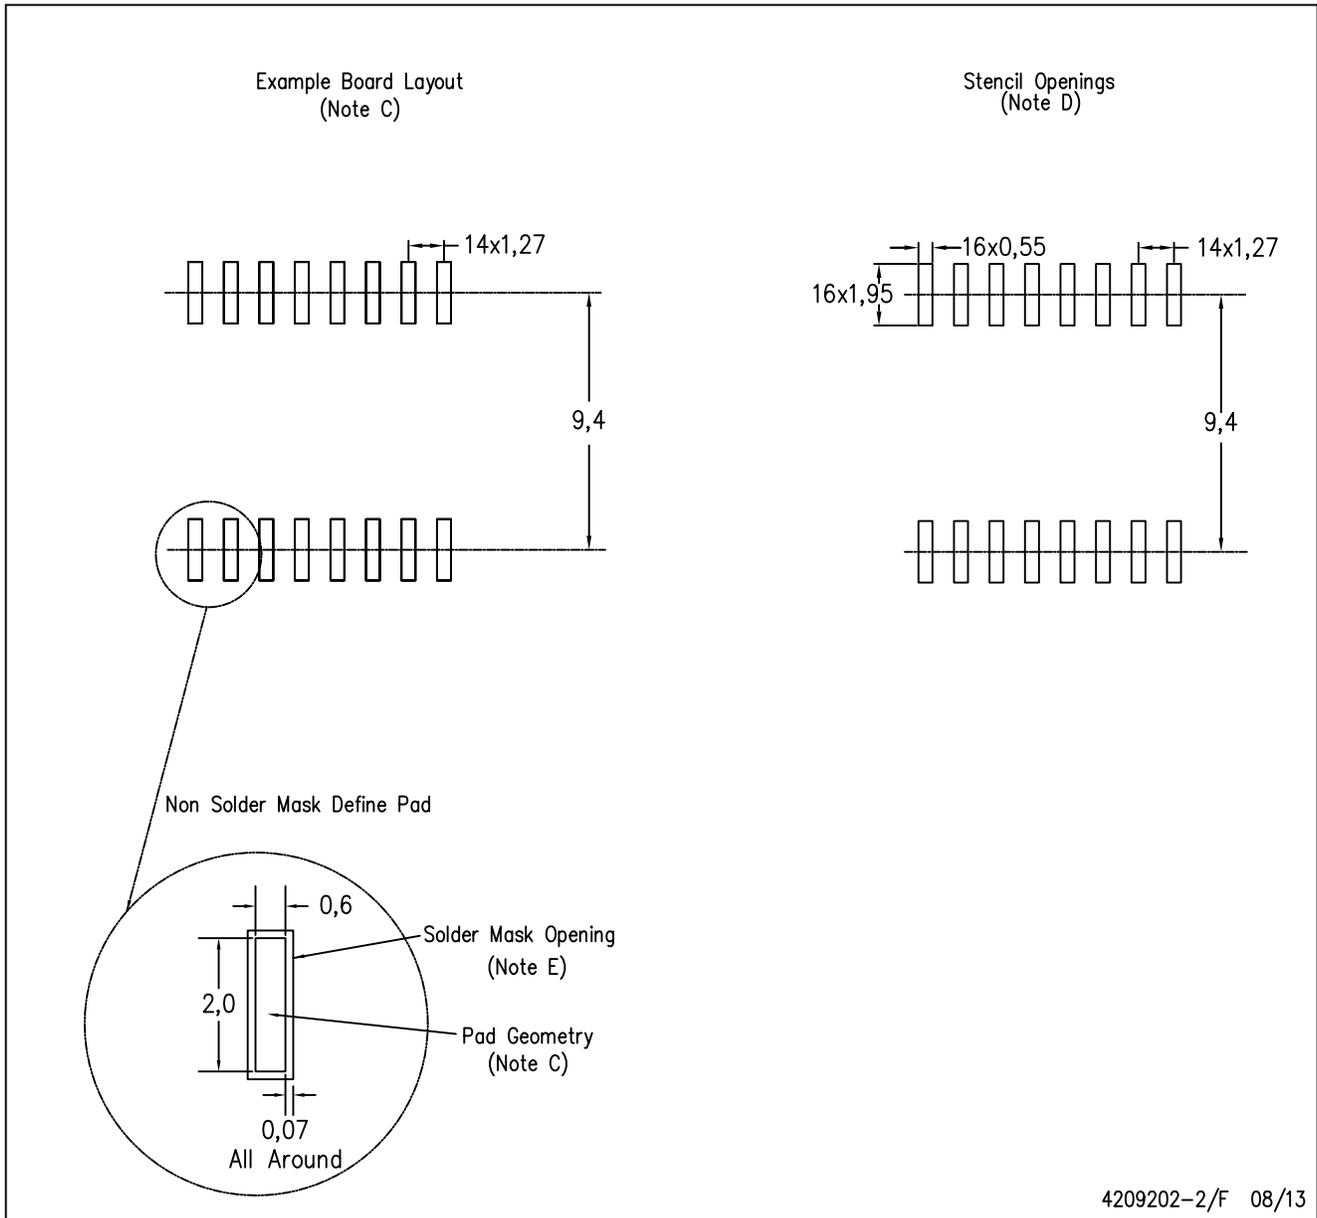

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in inches (millimeters). Dimensioning and tolerancing per ASME Y14.5M-1994.
  - B. This drawing is subject to change without notice.
  - C. Body dimensions do not include mold flash or protrusion not to exceed 0.006 (0,15).
  - D. Falls within JEDEC MS-013 variation AA.

DW (R-PDSO-G16)

PLASTIC SMALL OUTLINE

4209202-2/F 08/13

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Refer to IPC7351 for alternate board design.
  - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525
  - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
