Features

- Low-voltage and Standard-voltage Operation
 - 5.0 ($V_{CC} = 4.5V$ to 5.5V)
 - $-2.7 (V_{CC} = 2.7V \text{ to } 5.5V)$
 - $-2.5 (V_{CC} = 2.5 \text{V to } 5.5 \text{V})$
 - $-1.8 (V_{CC} = 1.8V \text{ to } 5.5V)$
- User-selectable Internal Organization
 - 1K: 128 x 8 or 64 x 16
 - 2K: 256 x 8 or 128 x 16
 - 4K: 512 x 8 or 256 x 16
- 3-wire Serial Interface
- 2 MHz Clock Rate (5V)
- Self-timed Write Cycle (10 ms max)
- High Reliability
 - Endurance: 1 Million Write Cycles
 - Data Retention: 100 Years
- Automotive Grade and Extended Temperature Devices Available
- 8-lead PDIP, 8-lead JEDEC and EIAJ SOIC, and 8-lead TSSOP Packages

Description

The AT93C46/56/66 provides 1024/2048/4096 bits of serial electrically erasable programmable read only memory (EEPROM) organized as 64/128/256 words of 16 bits each, when the ORG pin is connected to VCC and 128/256/512 words of 8 bits each when it is tied to ground. The device is optimized for use in many industrial and commercial applications where low power and low voltage operations are essential. The AT93C46/56/66 is available in space-saving 8-lead PDIP and 8-lead JEDEC and EIAJ SOIC packages. (continued)

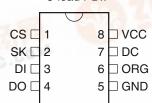

Pin Configurations

Pin Name	Function
CS	Chip Select
SK	Serial Data Clock
DI	Serial Data Input
DO	Serial Data Output
GND	Ground
VCC	Power Supply
ORG	Internal Organization
DC	Don't Connect

4K (512 x 8 or 256 x 16)

AT93C46 AT93C56 AT93C66

The AT93C46/56/66 is enabled through the Chip Select pin (CS), and accessed via a 3-wire serial interface consisting of Data Input (DI), Data Output (DO), and Shift Clock (SK). Upon receiving a READ instruction at DI, the address is decoded and the data is clocked out serially on the data output pin DO. The WRITE cycle is completely self-timed and no separate ERASE cycle is required before WRITE. The WRITE cycle is only enabled when the part is in the ERASE/WRITE ENABLE state. When CS is brought "high" following the initiation of a WRITE cycle, the DO pin outputs the READY/BUSY status of the part.

The AT93C46 is available in 4.5V to 5.5V, 2.7V to 5.5V, 2.5V to 5.5V, and 1.8V to 5.5V versions. The AT93C56/66 is available in 4.5V to 5.5V, 2.7V to 5.5V, and 2.5V to 5.5V versions.

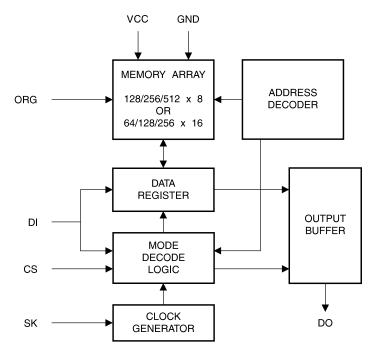

Absolute Maximum Ratings*

Operating Temperature55°C to +125°C
Storage Temperature65°C to +150°C
Voltage on Any Pin with Respect to Ground1.0V to +7.0V
Maximum Operating Voltage 6.25V
DC Output Current

*NOTICE:

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability

Block Diagram

Notes: 1. When the ORG pin is connected to VCC, the x 16 organization is selected. When it is connected to ground, the x 8 organization is selected. If the ORG pin is left unconnected and the application does not load the input beyond the capability of the internal 1 Meg ohm pullup, then the x 16 organization is selected. The feature is not available on the 1.8V devices.

2. For the AT93C46, if x 16 organization is the mode of choice and Pin 6 (ORG) is left unconnected, Atmel recommends using the AT93C46A device. For more details, see the AT93C46A datasheet.

Pin Capacitance⁽¹⁾

Applicable over recommended operating range from $T_A = 25$ °C, f = 1.0 MHz, $V_{CC} = +5.0$ V (unless otherwise noted).

Symbol	Test Conditions	Max	Units	Conditions
C _{OUT}	Output Capacitance (DO)	5	pF	$V_{OUT} = 0V$
C _{IN}	Input Capacitance (CS, SK, DI)	5	pF	$V_{IN} = 0V$

Note: 1. This parameter is characterized and is not 100% tested.

DC Characteristics

Applicable over recommended operating range from: T_{AI} = -40°C to +85°C, V_{CC} = +1.8V to +5.5V, T_{AC} = 0°C to +70°C, V_{CC} = +1.8V to +5.5V (unless otherwise noted).

Symbol	Parameter	Test Condition	Test Condition		Тур	Max	Unit
V _{CC1}	Supply Voltage			1.8		5.5	V
V _{CC2}	Supply Voltage			2.5		5.5	V

Instruction Set for the AT93C46

		Op	Add	Address		ata	
Instruction	SB	Code	x 8	x 16	x 8 x 16		Comments
READ	1	10	A ₆ - A ₀	A ₅ - A ₀			Reads data stored in memory, at specified address.
EWEN	1	00	11XXXXX	11XXXX			Write enable must precede all programming modes.
ERASE	1	11	A ₆ - A ₀	A ₅ - A ₀			Erase memory location A _n - A ₀ .
WRITE	1	01	A ₆ - A ₀	A ₅ - A ₀	D ₇ - D ₀	D ₁₅ - D ₀	Writes memory location A _n - A ₀ .
ERAL	1	00	10XXXXX	10XXXX			Erases all memory locations. Valid only at $V_{CC} = 4.5V$ to 5.5V.
WRAL	1	00	01XXXXX	01XXXX	D ₇ - D ₀	D ₁₅ - D ₀	Writes all memory locations. Valid only at $V_{CC} = 4.5V$ to 5.5V.
EWDS	1	00	00XXXXX	00XXXX			Disables all programming instructions.

Functional Description

The AT93C46/56/66 is accessed via a simple and versatile 3-wire serial communication interface. Device operation is controlled by seven instructions issued by the host processor. **A valid instruction starts with a rising edge of CS** and consists of a Start Bit (logic "1") followed by the appropriate Op Code and the desired memory Address location.

READ (READ): The Read (READ) instruction contains the Address code for the memory location to be read. After the instruction and address are decoded, data from the selected memory location is available at the serial output pin DO. Output data changes are synchronized with the rising edges of serial clock SK. It should be noted that a dummy bit (logic "0") precedes the 8- or 16-bit data output string.

ERASE/WRITE (EWEN): To assure data integrity, the part automatically goes into the Erase/Write Disable (EWDS) state when power is first applied. An Erase/Write Enable (EWEN) instruction must be executed first before any programming instructions can be carried out. Please note that once in the Erase/Write Enable state, programming remains enabled until an Erase/Write Disable (EWDS) instruction is executed or V_{CC} power is removed from the part.

ERASE (ERASE): The Erase (ERASE) instruction programs all bits in the specified memory location to the logical "1" state. The self-timed erase cycle starts once the ERASE instruction and address are decoded. The DO pin outputs the READY/BUSY status of the part if CS is brought high after being kept low for a minimum of 250 ns ($t_{\rm CS}$). A logic "1" at pin DO indicates that the selected memory location has been erased, and the part is ready for another instruction.

WRITE (WRITE): The Write (WRITE) instruction contains the 8 or 16 bits of data to be written into the specified memory location. The self-timed programming cycle, t_{WP} , starts after the last bit of data is received at serial data input pin DI. The DO pin outputs the READY/BUSY status of the part if CS is brought high after being kept low for a minimum of 250 ns (t_{CS}). A logic "0" at DO indicates that programming is still in progress. A logic "1" indicates that the memory location at the specified address has been written with the data pattern contained in the instruction and the part is ready for further instructions. A READY/BUSY status cannot be obtained if the CS is brought high after the end of the self-timed programming cycle, t_{WP} .

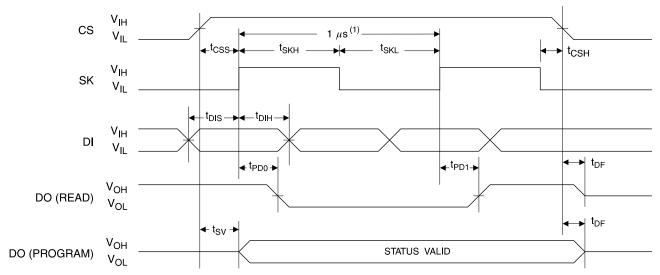

ERASE ALL (ERAL): The Erase All (ERAL) instruction programs every bit in the memory array to the logic "1" state and is primarily used for testing purposes. The DO pin outputs the READY/BUSY status of the part if CS is brought high after being kept low for a minimum of 250 ns (t_{CS}). The ERAL instruction is valid only at $V_{CC} = 5.0V \pm 10\%$.

WRITE ALL (WRAL): The Write All (WRAL) instruction programs all memory locations with the data patterns specified in the instruction. The DO pin outputs the READY/BUSY status of the part if CS is brought high after being kept low for a minimum of 250 ns (t_{CS}). The WRAL instruction is valid only at $V_{CC} = 5.0V \pm 10\%$.

ERASE/WRITE DISABLE (EWDS): To protect against accidental data disturb, the Erase/Write Disable (EWDS) instruction disables all programming modes and should be executed after all programming operations. The operation of the READ instruction is independent of both the EWEN and EWDS instructions and can be executed at any time.

Timing Diagrams

Synchronous Data Timing

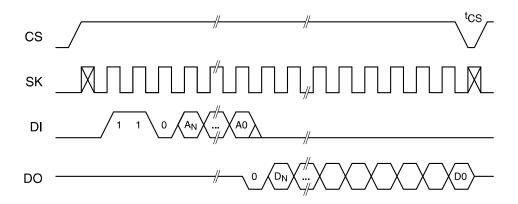

Note: 1. This is the minimum SK period.

Organization Key for Timing Diagrams

	AT93C46 (1K)		AT93C56 (2K)		AT93C66 (4K)	
I/O	x 8	x 16	x 8	x 16	x 8	x 16
A _N	A ₆	A ₅	A ₈ ⁽¹⁾	A ₇ ⁽²⁾	A ₈	A ₇
D _N	D ₇	D ₁₅	D ₇	D ₁₅	D ₇	D ₁₅

Notes: 1. A₈ is a DON'T CARE value, but the extra clock is required. 2. A₇ is a DON'T CARE value, but the extra clock is required.

Package Type	·					
8P3 8-lead, 0.300" Wide, Plastic Dual Inline Package (PDIP)						
8S1 8-lead, 0.150" Wide, Plastic Gull Wing Small Outline (JEDEC SOIC)						
8S2 8-lead, 0.200" Wide, Plastic Gull Wing Small Outline (EIAJ SOIC)						
8T 8-lead, 0.170" Wide, Thin Shrink Small Outline Package (TSSOP)						
Options						
Blank Standard Operation (4.5V to 5.5V)						
-2.7 Low Voltage (2.7V to 5.5V)	Low Voltage (2.7V to 5.5V)					
-2.5 Low Voltage (2.5V to 5.5V)						
-1.8 Low Voltage (1.8V to 5.5V)	Low Voltage (1.8V to 5.5V)					

Packaging Information

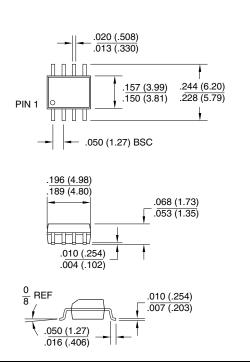

8P3, 8-lead, 0.300" Wide, Plastic Dual Inline Package (PDIP)

Dimensions in Inches and (Millimeters) JEDEC STANDARD MS-001 BA

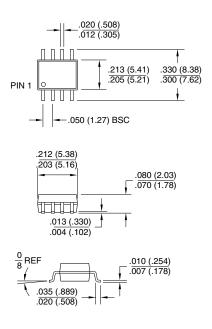

8S1, 8-lead, 0.150" Wide, Plastic Gull Wing Small Outline (JEDEC SOIC)

Dimensions in Inches and (Millimeters)

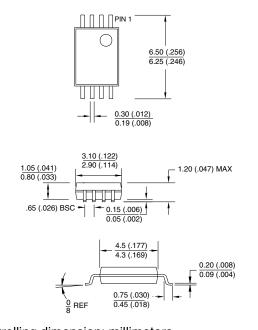

8S2, 8-lead, 0.200" Wide, Plastic Gull Wing Small Outline (EIAJ SOIC)

Dimensions in Inches and (Millimeters)

8T, 8-lead, 0.170" Wide, Thin Shrink Small Outline Package (TSSOP)

Dimensions in Millimeters and (Inches)*

*Controlling dimension: millimeters
