

## SYNCHRONOUS 4-BIT UP/DOWN BINARY COUNTERS

SDLS134 – OCTOBER 1976 – REVISED MARCH 1988

- Programmable Look-Ahead Up/Down Binary Counters
- Fully Synchronous Operation for Counting and Programming
- Internal Look-Ahead for Fast Counting
- Carry Output for n-Bit Cascading
- Fully Independent Clock Circuit

## description

These synchronous presettable counters feature an internal carry look-ahead for cascading in high speed counting applications. The 'LS169B and 'S169 are 4-bit binary counters. Synchronous operation is provided by having all flip-flops clocked simultaneously so that the outputs change coincident with each other when so instructed by the count-enable inputs and internal gating. This mode of operation helps eliminate the output counting spikes that are normally associated with asynchronous (ripple-clock) counters. A buffered clock input triggers the four master-slave flip-flops on the rising (positive-going) edge of the clock waveform.

These counters are fully programmable; that is the outputs may each be preset to either level. The load input circuitry allows loading with the carry-enable output of cascaded counters. As loading is synchronous, setting up a low level at the load input disables the counter and causes the outputs to agree with the data inputs after the next clock pulse.

The carry look-ahead circuitry provides for cascading counters for n-bit synchronous applications without additional gating. Instrumental in accomplishing this function are two count-enable inputs and a carry output. Both count enable inputs ( $\overline{\text{ENP}}$ ,  $\overline{\text{ENT}}$ ) must be low to count. The direction of the count is determined by the level of the up/down input. When the input is high, the counter counts up; when low, it counts down. Input  $\overline{\text{ENT}}$  is fed forward to enable the carry output. The carry output thus enabled will produce a low-level output pulse with a duration approximately equal to the high portion of the  $Q_A$  output when counting up and approximately equal to the low portion of the  $Q_A$  output when counting down. This low-level overflow carry pulse can be used to enable successive cascaded stages. Transitions at the  $\overline{\text{ENP}}$  or  $\overline{\text{ENT}}$  inputs are allowed regardless of the level of the clock input. All inputs are diode-clamped to minimize transmission-line effects, thereby simplifying system design.

These counters feature a fully independent clock circuit. Changes at control inputs ( $\overline{\text{ENP}}$ ,  $\overline{\text{ENT}}$ ,  $\overline{\text{LOAD}}$ ,  $\overline{\text{U/D}}$ ) that will modify the operating mode have no effect until clocking occurs. The function of the counter (whether enabled, disabled, loading, or counting) will be dictated solely by the conditions meeting the stable setup and hold times.

**typical load, count, and inhibit sequences**

Illustrated below is the following sequence:

1. Load (preset) to binary thirteen.
2. Count up to fourteen, fifteen (maximum), zero, one, and two.
3. Inhibit
4. Count down to one, zero (minimum), fifteen, fourteen, and thirteen

† For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions.

‡ All typical values are at  $V_{CC} = 5 \text{ V}, T_A = 25^\circ\text{C}$ .

§ Not more than one output should be shorted at a time, and duration of the short-circuit should not exceed one second.

NOTE 2:  $I_{CC}$  is measured after applying a momentary 4.5 V, then ground, to the clock input with all other inputs grounded and the outputs open.

switching characteristics,  $V_{CC} = 5 \text{ V}, T_A = 25^\circ\text{C}$  (see note 3)

¶ Propagation delay time from up/down to ripple carry must be measured with the counter at either a minimum or a maximum count. As the logic level of the up/down input is changed, the ripple carry output will follow. If the count is minimum (0), the ripple carry output transition will be in phase. If the count is maximum (15), the ripple carry output will be out of phase.

NOTE 3: Load circuits and voltage waveforms are shown in Section 1.

- NOTES:

4. Voltage values, except interemitter voltage, are with respect to network ground terminal.

5. This is the voltage between two emitters of a multiple-emitter transistor. For these circuits, this rating applies between the count enable inputs  $\overline{\text{ENP}}$  and  $\overline{\text{ENT}}$ .

6. A SN54S169 in the W package operating at free-air temperatures above 91°C requires a heat sink that provides a thermal resistance from case to free-air,  $R_{\theta CA}$ , of not more than 26°C/W.

† For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions.

‡ All typical values are at  $V_{CC} = 5 \text{ V}, T_A = 25^\circ\text{C}$ .

§ Not more than one output should be shorted at a time, and duration of the short-circuit should not exceed one second.

NOTE 2:  $I_{CC}$  is measured after applying a momentary 4.5 V, then ground, to the clock input with all other inputs grounded and the outputs open.

switching characteristics,  $V_{CC} = 5 \text{ V}, T_A = 25^\circ\text{C}$

¶  $t_{\text{max}}$  = maximum clock frequency

$t_{PLH}$  = propagation delay time, low-to-high-level output

$t_{PHL}$  = propagation delay time, high-to-low-level output

Propagation delay time from up/down to ripple carry must be measured with the counter at either a minimum or a maximum count. As the logic level of the up/down input is changed, the ripple carry output will follow. If the count is minimum (0), the ripple carry output transition will be in phase. If the count is maximum (15 for 'S169), the ripple carry output will be out of phase.

NOTE 3: Load circuits and voltage waveforms are shown in Section 1.

SDLS134 – OCTOBER 1976 – REVISED MARCH 1988

**PARAMETER MEASUREMENT INFORMATION**

**VOLTAGE WAVEFORMS**

- NOTES: A. The input pulses are supplied by a generator having the following characteristics:  $PRR \leq 1 \text{ MHz}$ , duty cycle  $\leq 50\%$ ,  $Z_{out} \approx 50 \Omega$ ; for 'LS169B,  $t_r \leq 15 \text{ ns}$ ;  $t_f \leq 6 \text{ ns}$ , and for 'S169,  $t_r \leq 2.5 \text{ ns}$ ,  $t_f \leq 2.5 \text{ ns}$ .  
B. For 'LS169B,  $V_{ref} = 1.3 \text{ V}$ ; for 'S168 and 'S169,  $V_{ref} = 1.5 \text{ V}$ .

**FIGURE 1—PULSE WIDTHS, SETUP TIMES, HOLD TIMES**

**VOLTAGE WAVEFORMS**

- NOTES: A. The input pulses are supplied by a generator having the following characteristics:  $PRR \leq \text{MHz}$ , duty cycle  $\leq 50\%$ ,  $Z_{out} \approx 50 \Omega$ ; for 'LS169B,  $t_r \leq 15 \text{ ns}$ ,  $t_f \leq 5 \text{ ns}$ ; and for 'S169,  $t_r \leq 2.5 \text{ ns}$ ,  $t_f \leq 2.5 \text{ ns}$ .  
B.  $t_{PLH}$  and  $t_{PHL}$  from enable T input to ripple carry output assume that the counter is at the maximum count, all Q outputs high.  
C. For 'LS169B,  $V_{ref} = 1.3 \text{ V}$ ; for 'S169,  $V_{ref} = 1.5 \text{ V}$ .  
D. Propagation delay time from up/down to ripple carry must be measured with the counter at either a minimum or a maximum count. As the logic level of the up/down input is changed, the ripple carry output will follow. If the count is minimum (0) the ripple carry output transition will be in phase. If the count is maximum (15), the ripple carry output will be out of phase.

**SYNCHRONOUS 4-BIT UP/DOWN BINARY COUNTERS**  
SDLS134 – OCTOBER 1976 – REVISED MARCH 1988

**PARAMETER MEASUREMENT INFORMATION**

**UP-COUNT VOLTAGE WAVEFORMS**

- NOTES: A. The input pulses are supplied by a generator having the following characteristics:  $\text{PRR} \leq 1 \text{ MHz}$ , duty cycle  $\leq 50\%$ ,  $Z_{\text{out}} \approx 50 \Omega$ ; for 'LS169B,  $t_r \leq 15 \text{ ns}$ ;  $t_f \leq 6 \text{ ns}$ , and 'S169,  $t_r \leq 2.5 \text{ ns}$ ,  $t_f \leq 2.5 \text{ ns}$ . Vary PRR to measure  $f_{\text{max}}$ .  
B. Outputs QD and carry are tested at  $t_{n+16}$ , where  $t_n$  is the bit-time when all outputs are low.  
C. For 'LS169B,  $V_{\text{ref}} = 1.3 \text{ V}$ ; for 'S169,  $V_{\text{ref}} = 1.5 \text{ V}$ .

<sup>(1)</sup> The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBsolete:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS) or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

4040083/F 03/03

- NOTES:
- A. All linear dimensions are in inches (millimeters).
  - B. This drawing is subject to change without notice.
  - C. This package is hermetically sealed with a ceramic lid using glass frit.
  - D. Index point is provided on cap for terminal identification only on press ceramic glass frit seal only.
  - E. Falls within MIL STD 1835 GDIP1-T14, GDIP1-T16, GDIP1-T18 and GDIP1-T20.

  - C. Body dimensions do not include mold flash or protrusion, not to exceed 0,15.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
