**2.5V REFERENCE DIODE, GUARANTEED TO 100K RAD(SI)
TESTED TO MIL-STD-883, METHOD 1019.5**

General Description

The LM136A-2.5 integrated circuit is a precision 2.5V shunt regulator diode. This monolithic IC voltage reference operates as a low-temperature-coefficient 2.5V zener with 0.2 Ohms dynamic impedance. A third terminal on the LM136A-2.5 allows the reference voltage and temperature coefficient to be trimmed easily.

The LM136A-2.5 is useful as a precision 2.5V low voltage reference for digital voltmeters, power supplies or op amp circuitry. The 2.5V makes it convenient to obtain a stable reference from 5V logic supplies. Further, since the LM136A-2.5 operates as a shunt regulator, it can be used as either a positive or negative voltage reference.

Features

- Low temperature coefficient
- Wide operating current of 400uA to 10mA
- 0.2 Ohms dynamic impedance
- $\pm 1\%$ initial tolerance available
- Guaranteed temperature stability
- Easily trimmed for minimum temperature drift
- Fast turn-on
- Three lead transistor package

ESD Rating (Note 3)	1000V

- Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics. The guaranteed specifications apply only for the test conditions listed. Some performance characteristics may degrade when the device is not operated under the listed test conditions.
- Note 2: The maximum power dissipation must be derated at elevated temperatures and is dictated by T_{jmax} (maximum junction temperature), Theta_{JA} (package junction to ambient thermal resistance), and TA (ambient temperature). The maximum allowable power dissipation at any temperature is P_{dmax} = (T_{jmax} - TA) /Theta_{JA} or the number given in the Absolute Maximum Ratings, whichever is lower.
- Note 3: Human body model, 1.5K Ohms in series with 100pF.

DC PARAMETERS: DRIFT VALUES, (SEE NOTE 3)

(The following conditions apply to all the following parameters, unless otherwise specified.)
 DC: "Delta Calculation Performed on QMLV devices at Group B, Subgroup 5 ONLY"

Vz	Zener Voltage	$V_{adj} = \text{Open}$	3		-10	10	mV	1
		$V_{adj} = 0.7V$	3		-10	10	mV	1
		$V_{adj} = 1.9V$	3		-10	10	mV	1

Note 1: Parameter tested go-no-go only.

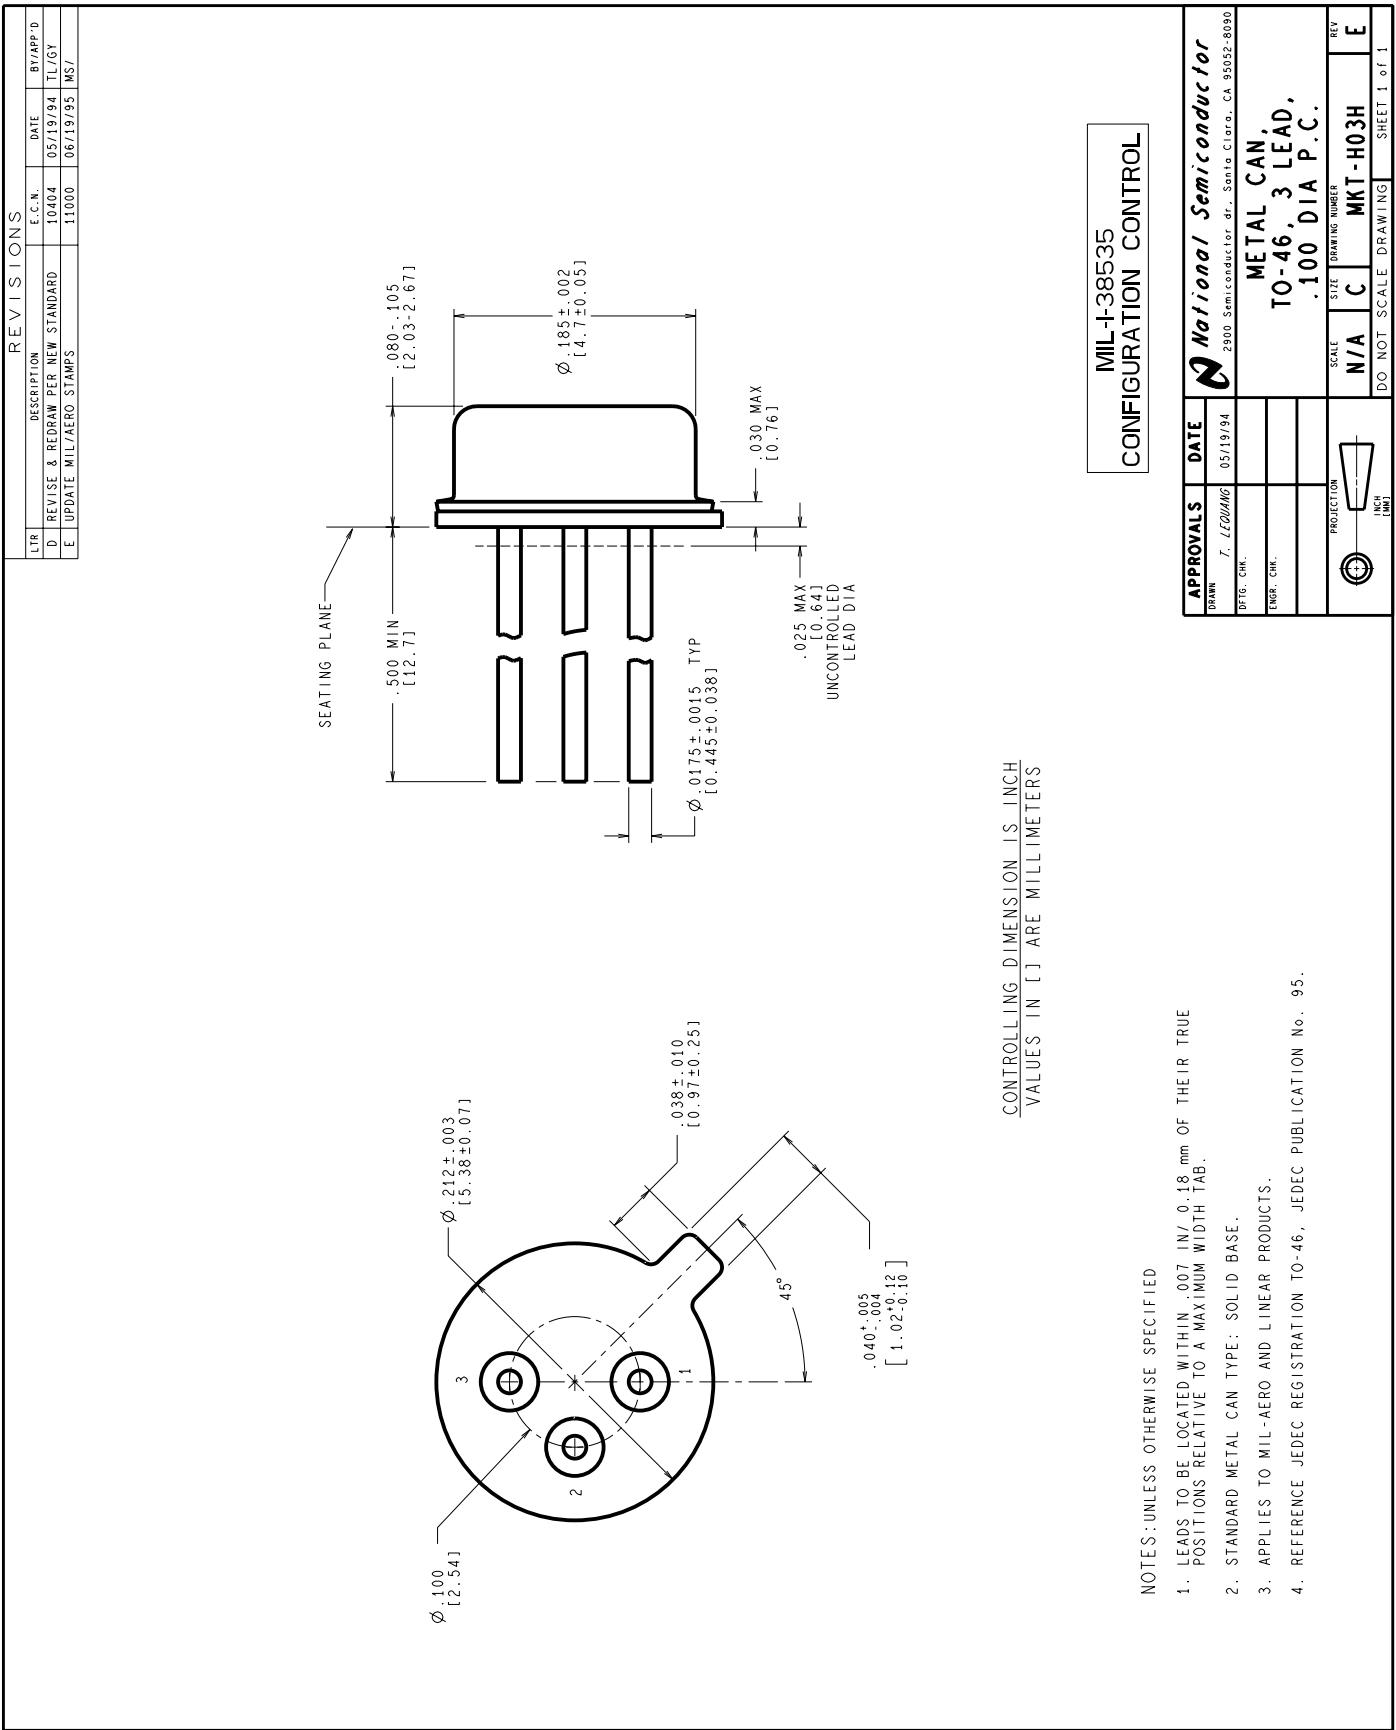

Note 2: Tested on Auto Drift Oven.

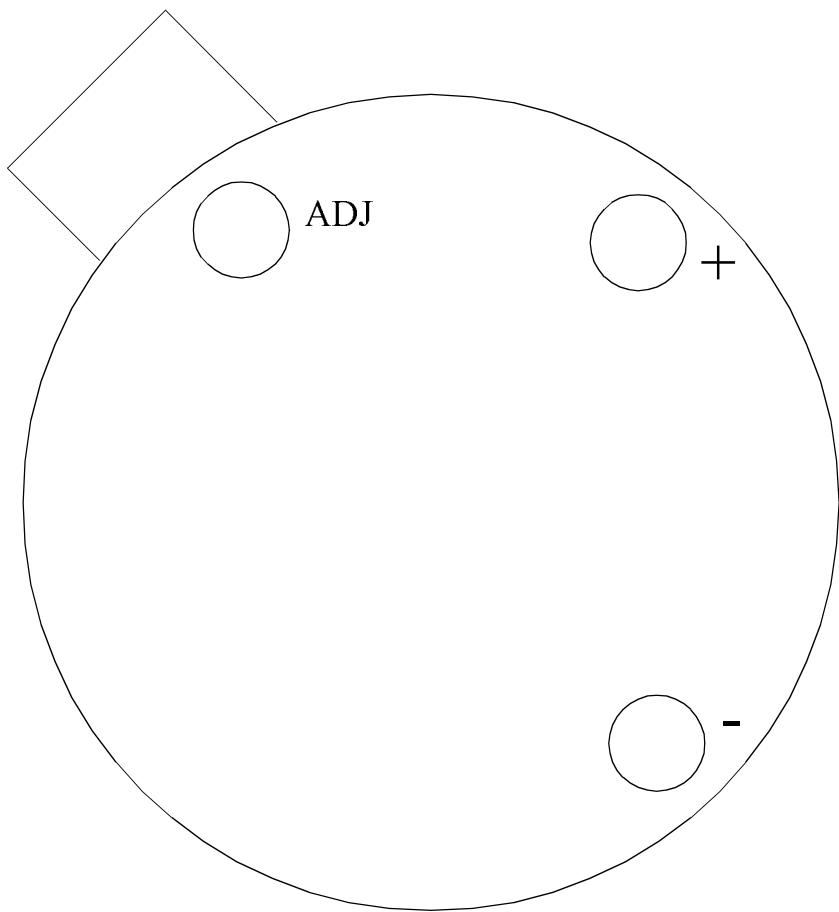

Note 3: Pre and post irradiation limits are identical to those listed under AC and DC electrical characteristics. These parts may be dose rate sensitive in a space environment and may demonstrate enhanced low dose rate effect. Radiation end point limits for the noted parameters are guaranteed only for the conditions as specified in MIL-STD-883, Method 1019.5.
