### DESCRIPTION

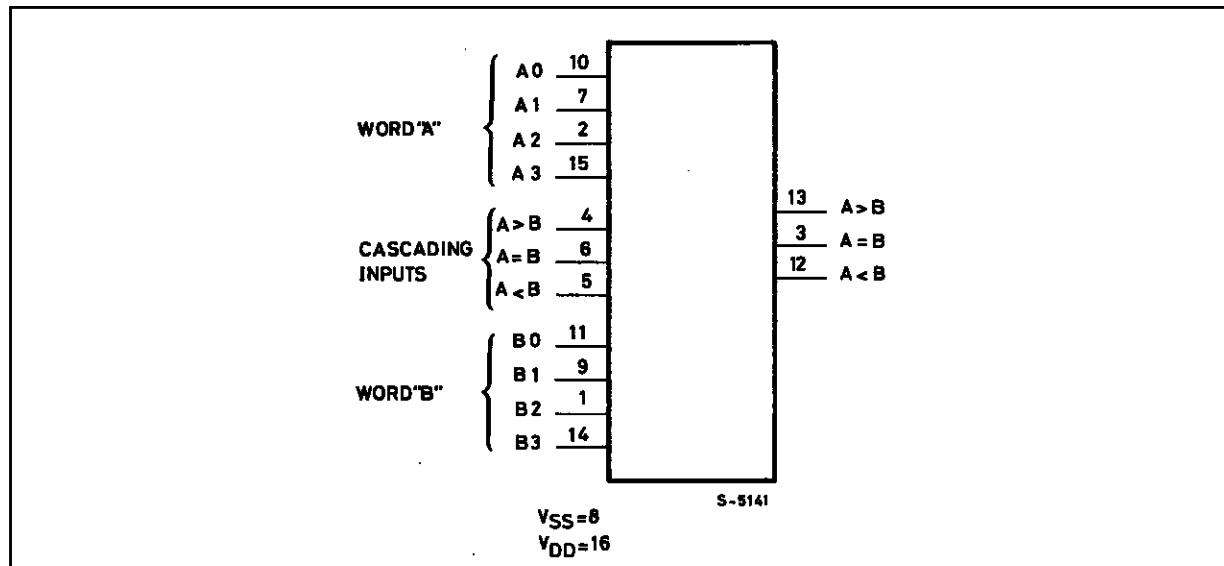

The **HCC4585B** (extended temperature range) and **HCF4585B** (intermediate temperature range) are monolithic integrated circuits, available in 16-lead dual in-line plastic or ceramic package, and plastic micro package. The **HCC/HCF4585B** is a 4-bit magnitude comparator designed for use in computer and logic applications that require the comparison of two 4-bit words. This logic circuit determines whether one 4-bit word (Binary or BCD) is "less than", "equal to", or "greater than" a second 4-bit word. The **HCC/HCF4585B** has eight comparing inputs ( $A_3, B_3$ , through  $A_0, B_0$ ), three outputs ( $A < B, A = B, A > B$ ) and three cascading inputs ( $A < B, A = B, A > B$ ) that permit systems designers to expand the comparator function to 8, 12, 16 ... 4 N bits. When a single **HCC/HCF4585B** is used, the cascading inputs are connected as follows :  $(A < B) = \text{low}$ ,  $(A = B) = \text{high}$ ,  $(A > B) = \text{high}$ . Cascading these units for comparison of more than 4 bits is accomplished as shown in typical application.
