

A5833

BiMOS II 32-Bit Serial Input Latched Driver

Last Time Buy

These parts are in production but have been determined to be LAST TIME BUY. This classification indicates that the product is obsolete and notice has been given. Sale of this device is currently restricted to existing customer applications. The device should not be purchased for new design applications because of obsolescence in the near future. Samples are no longer available.

Date of status change: May 2, 2005

Deadline for receipt of LAST TIME BUY orders: October 28, 2005

Recommended Substitutions:

For new customers or new applications, refer to the [A6833](#).

NOTE: For detailed information on purchasing options, contact your local Allegro field applications engineer or sales representative.

Allegro MicroSystems, Inc. reserves the right to make, from time to time, revisions to the anticipated product life cycle plan for a product to accommodate changes in production capabilities, alternative product availabilities, or market demand. The information included herein is believed to be accurate and reliable. However, Allegro MicroSystems, Inc. assumes no responsibility for its use; nor for any infringements of patents or other rights of third parties which may result from its use.

BiMOS II 32-BIT SERIAL-INPUT, LATCHED DRIVER

Designed to reduce logic supply current, chip size, and system cost, the UCN5833A/EP integrated circuits offer high-speed operation for thermal printers. These devices can also be used to drive multiplexed LED displays or incandescent lamps within their 125 mA peak output current rating. The combination of bipolar and MOS technologies gives BiMOS II smart power ICs an interface flexibility beyond the reach of standard buffers and power driver circuits.

These 32-bit drivers have bipolar open-collector npn Darlington outputs, a CMOS data latch for each of the drivers, a 32-bit CMOS shift register, and CMOS control circuitry. The high-speed CMOS shift registers and latches allow operation with most microprocessor-based systems at data input rates above 3.3 MHz. Use of these drivers with TTL may require input pull-up resistors to ensure an input logic high.

The UCN5833A is supplied in a 40-pin dual in-line plastic package with 0.600" (15.24 mm) row spacing. At an ambient temperature of +75°C, all outputs of the DIP-packaged device will sustain 50 mA continuously. For high-density applications, the UCN5833EP is available. This 44-lead plastic chip carrier (quad pack) is intended for surface-mounting on solder lands with 0.050" (1.27 mm) centers. CMOS serial data outputs permit cascading for applications requiring additional drive lines.

Dwg. No. A-13,049

ABSOLUTE MAXIMUM RATINGS at +25°C Free-Air Temperature

Output Voltage, V_{OUT}	30 V
Logic Supply Voltage, V_{DD}	7.0 V
Input Voltage Range, V_{IN}	-0.3 V to $V_{DD} + 0.3$ V
Continuous Output Current, I_{OUT} (each output)	125 mA
Package Power Dissipation, P_D (UCN5833A)	3.5 W*
(UCN5833EP)	2.5 W*
Operating Temperature Range, T_A	-20°C to +85°C
Storage Temperature Range, T_S	-55°C to +150°C

* Derate linearly to 0 W at +150°C.

Caution: CMOS devices have input static protection but are susceptible to damage when exposed to extremely high static electrical charges.

FEATURES

- To 3.3 MHz Data Input Rate
- 30 V Minimum Output Breakdown
- Darlington Current-Sink Outputs
- Low-Power CMOS Logic and Latches

Always order by complete part number:

ELECTRICAL CHARACTERISTICS at $T_A = +25^\circ\text{C}$, $V_{DD} = 5\text{ V}$ (unless otherwise noted).

Characteristic	Symbol	Test Conditions	Limits		
			Min.	Max.	Units
Output Leakage Current	I_{CEX}	$V_{OUT} = 30\text{ V}$, $T_A = 70^\circ\text{C}$	—	10	μA
Collector-Emitter Saturation Voltage	$V_{CE(SAT)}$	$I_{OUT} = 50\text{ mA}$	—	1.2	V
		$I_{OUT} = 100\text{ mA}$	—	1.7	V
Input Voltage	$V_{IN(1)}$		3.5	5.3	V
	$V_{IN(0)}$		-0.3	+0.8	V
Input Current	$I_{IN(1)}$	$V_{IN} = 5.0\text{ V}$	—	1.0	μA
	$I_{IN(0)}$	$V_{IN} = 0\text{ V}$	—	-1.0	μA
Serial Output Voltage	$V_{OUT(1)}$	$I_{OUT} = -200\text{ }\mu\text{A}$	4.5	—	V
	$V_{OUT(0)}$	$I_{OUT} = 200\text{ }\mu\text{A}$	—	0.3	V
Supply Current	I_{DD}	One output ON, $I_{OUT} = 100\text{ mA}$	—	1.0	mA
		All outputs OFF	—	50	μA
Output Rise Time	t_r	$I_{OUT} = 100\text{ mA}$, 10% to 90%	—	500	ns
Output Fall Time	t_f	$I_{OUT} = 100\text{ mA}$, 90% to 10%	—	500	ns

NOTE: Positive (negative) current is defined as going into (coming out of) the specified device pin.

BiMOS II 32-BIT SERIAL-INPUT, LATCHED DRIVER

Dwg. No. A-12,276A

TIMING CONDITIONS

($V_{DD} = 5.0$ V, Logic Levels are V_{DD} and Ground)

- A. Minimum Data Active Time Before Clock Pulse
(Data Set-Up Time) **75 ns**
- B. Minimum Data Active Time After Clock Pulse
(Data Hold Time) **75 ns**
- C. Minimum Data Pulse Width **150 ns**
- D. Minimum Clock Pulse Width **150 ns**
- E. Minimum Time Between Clock Activation and Strobe **300 ns**
- F. Minimum Strobe Pulse Width **100 ns**
- G. Typical Time Between Strobe Activation and
Output Transition **500 ns**

Serial Data present at the input is transferred to the shift register on the logic "0" to logic "1" transition of the CLOCK input pulse. On succeeding CLOCK pulses, the registers shift data information towards the SERIAL DATA OUTPUT. The SERIAL DATA must appear at the input prior to the rising edge of the CLOCK input waveform.

Information present at any register is transferred to its respective latch when the STROBE is high (serial-to-parallel conversion). The latches will continue to accept new data as long as the STROBE is held high. Applications where the latches are bypassed (STROBE tied high) will require that the OUTPUT ENABLE input be low during serial data entry.

When the OUTPUT ENABLE input is low, all of the output buffers are disabled (OFF) without affecting the information stored in the latches or shift register. With the OUTPUT ENABLE input high, the outputs are controlled by the state of the latches.
