NTE967 Linear Integrated Circuit Voltage Regulator, Negative, -12V, 1A

Description:

The NTE967 is a negative voltage regulator in a TO220 type package that employs current limiting, thermal shutdown, and safe-area compensation which makes it remarkably rugged under most operating conditions. With adequate heat-sinking they can deliver output currents in excess of 1.0 amperes.

Features:

- Thermal Short Circuit and safe Area Protection
- High Ripple Rejection

Absolute Maximum Ratings:

Input Voltage, V_{IN}	-40V
Input–Output Differential	30V
Power Dissipation (Note 1), P_D	Internally Limited
Operating Junction Temperature Range, T_J	0° to +125°C
Storage Temperature Range, T_{STG}	-65° to +150°C
Lead Temperature (During Soldering, 10sec), T_L	+230°C

Note 1. For calculations of junction temperature rise due to power dissipation, thermal resistance junction-to-ambient (R_{thJA}) is 50°C/W (no heat sink) and 5°C/W (infinite heat sink).
