

Dual Precision JFET Input Operational Amplifiers

FEATURES

- Internally Trimmed Offset Voltage 1mV Max.
- Offset Voltage Drift $10\mu\text{V}/^\circ\text{C}$ Max.
- High Slew Rate $10\text{V}/\mu\text{s}$ Min.
- Wide Bandwidth 3.5MHz Min.
- Low Supply Current per Amplifier 1.8mA Typ.
- Low Input Bias Current 10pA Typ.
- Standard 8-Pin Configuration
- All Packages Available:
Metal Can
Hermetic DIP
Plastic DIP

DESCRIPTION

Linear Technology's LF412A and OP-215 series of dual JFET input op amps feature several improvements compared to similar types from other manufacturers.

Both devices have lower input bias and offset currents over the entire temperature range, and are available in all standard 8-pin packages.

In addition, Linear's LF412A has lower voltage noise and higher voltage gain. Linear's OP-215 supply currents are nearly halved.

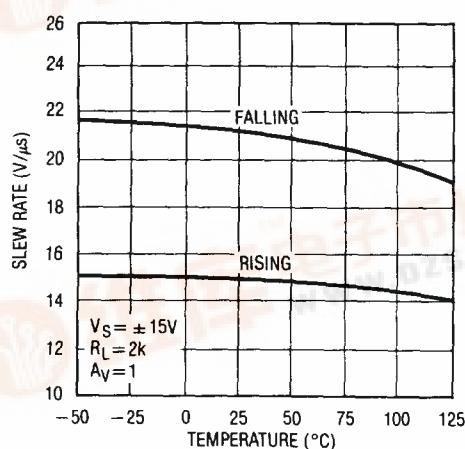

2

APPLICATIONS

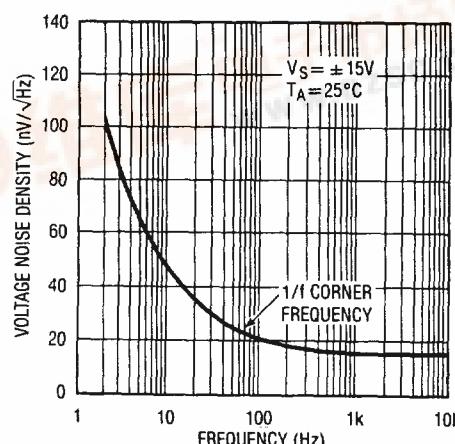

- Sample and Hold Amplifiers
- Output Amplifier for Dual Current Output DACs
- High Speed Integrators
- Photocell Amplifiers
- High Input Impedance Instrumentation Amplifiers

Please see the LT1057/LT1058 data sheet for applications requiring higher performance. The LT1057 is a pin compatible JFET input dual, the LT1058 is a JFET input quad op amp in the standard 14-pin DIP configuration.

Slew Rate

Voltage Noise Density vs Frequency

LF412A / OP-215

ABSOLUTE MAXIMUM RATINGS

Supply Voltage

LF412AM/AC, OP-215A/E.....	$\pm 22V$
LF412M/C, OP-215C/G	$\pm 18V$

Internal Power Dissipation 670mW

Operating Temperature Range

LF412AM/M, OP-215A/C..... -55°C to 125°C

LF412AC/C, OP-215E/G 0°C to 70°C

Differential Input Voltage

LF412AM/AC, OP-215A/E..... $\pm 40V$

LF412M/C, OP-215C/G..... $\pm 30V$

Input Voltage (Note A)

LF412AM/AC, OP-215A/E..... $\pm 20V$

LF412M/C, OP-215C/G $\pm 16V$

Output Short Circuit Duration

..... Indefinite

Storage Temperature Range..... -65°C to 150°C

Lead Temperature (Soldering, 10 sec) 300°C

Note A: Maximum negative input voltage is equal to the negative supply voltage.

The ● denotes the specifications which apply over the full operating temperature range. The shaded electrical specifications indicate those parameters which have been improved or guaranteed test limits provided for the first time.

Note 1: Input bias and offset currents are specified for two different conditions. The T specification is with the junction at ambient temperature; the

warmed-up specification is with the device operating in a warmed-up condition at the ambient temperature specified.

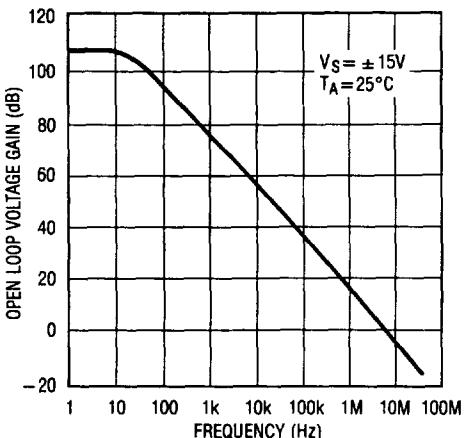

Note 2: Gain-bandwidth product is not tested. It is guaranteed by design and by inference from the slew rate measurement.

Note 3: The LF412A is 100% tested to this specification. All other grades are sample tested.
