Surge Absorbers

Z-TRAP ENE series

Nominal varistor voltage 200 to 470V

■ Features

- Excellent clamping characteristics
- High discharge current capability
- Fast response time
- Eliminate follow-on current

■ Maximum ratings and characteristics

● Nominal varistor voltage 200 to 270V

Device type	Max. applied voltage *1 AC(Vrms) DC(V)	Nominal varistor peak voltage*2 (Tolerance)(V)	Clamping voltage*3 Vc(V)	Peak current*4 Ip(A)	Energy *5 (J)	Average power dissipation (W)	Typical capacitance f=1kHz (pF)	Standards *6 UL1 UL2 CSA

*1 Operating ambient temperature: -40 to 85

*2 Storage temperature: -40 to 125

Approved Not approved

*3 The waveform of the maximum DC applied voltage is flat. When a ripple voltage as from a rectifier source is applied, make sure that the peak voltage is within the Vdc rating.

The AC applied voltage is a sine waveform. When waveform distortion is extensive, make sure that the peak voltage is less than $\sqrt{2}$ times the Vacm rating.

*4 Indicates the varistor terminal voltage measured with 1mA DC applied (V_{1mA}). For 0.5A types, 0.1mA DC applied (V_{0.1mA})

*5 Indicates the peak terminal voltage measured with 8/20 Impulse current (Ip) applied.

*6 The peak current rating is based on 8/20 test impulse waveform. The peak current is the max. peak current at which the nominal varistor voltage shift does not exceed $\pm 10\%$ when the test impulse is applied twice at a 5-minute interval.

*7 The rating is the max. allowable energy of a single 2ms square-waveform impulse current continuously applied. Energy ratings are based on a shift of Vnom of less than $\pm 10\%$ of the initial value.

*8 UL1: UL1414 File No. E66188

UL2: UL1449 File No. E123894

*¹ The waveform of the maximum DC applied voltage is flat. When a ripple voltage as from a rectifier source is applied, make sure that the peak voltage is within the V_{dcm} rating.

The AC applied voltage is a sine waveform. When waveform distortion is extensive, make sure that the peak voltage is less than $\sqrt{2}$ times the V_{dcm} rating.

*² Indicates the varistor terminal voltage measured with 1mA DC applied (V_{1mA}). For 0.5A types, 0.1mA DC applied (V_{0.1mA})

*³ Indicates the peak terminal voltage measured with 8/20 Impulse current (Ip) applied.

*⁴ The peak current rating is based on 8/20 test impulse waveform. The peak current is the max. peak current at which the nominal varistor voltage shift does not exceed $\pm 10\%$ when the test impulse is applied twice at a 5-minute interval.

*⁵ The rating is the max. allowable energy of a single 2ms square-waveform impulse current continuously applied. Energy ratings are based on a shift of V_{norm} of less than $\pm 10\%$ of the initial value.
