

MC33078

Low Noise Dual Operational Amplifier

- Low voltage noise: **4.5nV/√Hz**
- High gain bandwidth product: **15MHz**
- High slew rate: **7V/μs**
- Low distortion: 0.002%
- Large output voltage swing: +14.3V / -14.6V
- Low input offset voltage
- Excellent frequency stability
- ESD protection 2kV
- Macromodel included in this specification

Description

The MC33078 is a monolithic dual operational amplifier particularly well suited for audio applications.

It offers low voltage noise (4.5nV/√Hz) and high frequency performances (15MHz gain bandwidth product, 7V/μs slew rate).

In addition, the MC33078 has a very low distortion (0.002%) and excellent phase/gain margins.

The output stage allows a large output voltage swing and symmetrical source and sink currents.

1 Absolute Maximum Ratings

Table 1. Key parameters and their absolute maximum ratings

Symbol	Parameter	Value	Unit
V_{CC}	Supply Voltage	± 18 or $+36$	V
V_{id}	Differential Input Voltage - note ⁽¹⁾	± 30	V
V_i	Input Voltage - see note 1	± 15	V
	Output Short Circuit Duration	Infinite	s
T_{oper}	Operating Free-Air Temperature Range	-40 to 105	°C
T_j	Junction Temperature	+150	°C
T_{stg}	Storage Temperature	-65 to +150	°C
P_{tot}	Maximum Power Dissipation - note ⁽²⁾	500	mW

1. Either or both input voltages must not exceed the magnitude of V_{CC}^+ or V_{CC}^- .

2. Power dissipation must be considered to ensure maximum junction temperature (T_j) is not exceeded.

4 Macromodels

4.1 Important note concerning this macromodel

Please consider following remarks before using this macromodel.

- All models are a trade-off between accuracy and complexity (i.e. simulation time).
- Macromodels are not a substitute to breadboarding; rather, they confirm the validity of a design approach and help to select surrounding component values.
- A macromodel emulates the NOMINAL performance of a TYPICAL device within SPECIFIED OPERATING CONDITIONS (i.e. temperature, supply voltage, etc.). Thus the macromodel is often not as exhaustive as the datasheet, its goal is to illustrate the main parameters of the product.
- Data issued from macromodels used outside of its specified conditions (V_{CC} , Temperature, etc.) or even worse: outside of the device operating conditions (V_{CC} , V_{icm} , etc.) are not reliable in any way.

In [Section 4.2](#), the electrical characteristics resulting from the use of this macromodel are presented.

4.2 Electrical characteristics from macromodelization

5 Package Mechanical Data

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a Lead-free second level interconnect. The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com.
