

HEX OPERATIONAL AMPLIFIER

GENERAL DESCRIPTION

NJM 2097 is a high performance hex operational amplifiers featuring wide operating supply voltage (± 2 to ± 7.5 V), high slew rate (5 V/ μ S) and large gain bandwidth product (10 MHz). Supply voltage can be applied to dual (2ch.), quad (4ch.) and hex (6ch.) operational amplifiers. NJM 2097 can be applied for the circuit which requires a lot of operational amplifiers like that of active filter.
