PT78NR200 Series

10-12W Plus to Minus Voltage Integrated Switching Regulator

Power Trends Products from Texas Instruments

SLTS074A

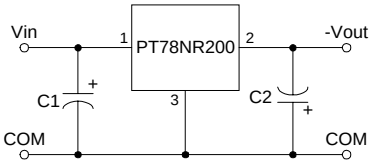
(Revised 6/30/2000)

- Negative output from positive input
- Wide Input Range
- Self-Contained Inductor
- Short Circuit Protection
- Over-Temperature Protection
- Fast Transient Response

The PT78NR200 series creates negative output voltage from a positive input voltage greater than 9V. These easy-to-use, 3-terminal, Integrated Switching Regulators (ISRs) have maximum output power of 10 to 12 watts and a negative output voltage that is laser trimmed. They also have excellent line and load regulation.

The PT78NR200 requires 100 LFM of airflow at its maximum output current.

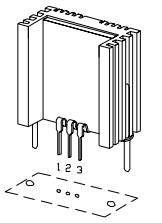
Standard Application



C1 = Required 100µF electrolytic
C2 = Required 100µF electrolytic

Pin-Out Information

Pin	Function
1	$+V_{in}$
2	$-V_{out}$
3	GND



Pkg Style 600

Ordering Information

PT78NR2 XX Y

Output Voltage	Package Suffix
52 = -5.2 Volts	**H** = Horizontal Mount
06 = -6.0 Volts	**S** = Surface Mount
12 = -12.0 Volts	**V** = Vertical Mount
15 = -15.0 Volts	

(For dimensions and PC board layout, see Package Styles 600 and 610.)

*ISR will operate down to no load with reduced specifications. **See Thermal Derating chart.

Note: *The PT78NR200 series requires a 100µF electrolytic or tantalum output capacitor for proper operation in all applications.*

IMPORTANT NOTICE

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgment, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its semiconductor products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

Customers are responsible for their applications using TI components.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.
