

14-BIT FULL DUPLEX SERIALIZER/DESERIALIZER

FEATURES

- 10 MHz to 100 MHz Shift Clock Support
- 175 Mbytes/sec In TX/RX Modes
- Reduces Cable Size, Cost, and System EMI
- Bidirectional Data Communication
- Total Power < 360 mW Typ at 100-MHz Worst Case Pattern
- Power-Down Mode: < 500 μ W Typ
- No External Components Required for PLL
- Inputs and Outputs Compatible with TIA/EIA-644 LVDS Standard
- ESD Rating > 5 kV (HBM)

- Integrated Termination Resistor
- Supports Spread Spectrum Clocking
- 64-Pin TQFP Package (PAG)

APPLICATIONS

- Flash Memory Cards
- Plain Paper Copiers
- Printers

DESCRIPTION

The SN75LVDT1422 Full Duplex Serializer/Deserializer incorporates a 14-bit serializer and a 14-bit deserializer. Operation of the serializer is independent of the operation of the deserializer. The 14-bit serializer accepts 14 TTL input lines and generates 2 LVDS high-speed serial streams plus one LVDS clock signal. The 14-bit deserializer accepts 3 LVDS input signals (2 high-speed serial streams and one LVDS clock signal) and drives out 14 TTL data signals plus one TTL clock.

The serializer loads 14 data bits into registers upon the rising or falling edge of the input clock signal (CLK IN). Rising or falling edge operation can be selected via the R/F select pin for the transmitter only. The frequency of CLK IN is multiplied seven times and then used to unload the data registers in 7-bit slices. The two high-speed serial streams and a phase-locked clock ($TCLK_{\pm}$) are then output to LVDS output drivers. The frequency of $TCLK_{\pm}$ is the same as the input clock, CLK IN.

The deserializer accepts data on two high-speed LVDS data lines. High-speed data is received and loaded into registers at the rate seven times the LVDS input clock ($RCLK_{\pm}$). The data is then unloaded to a 14-bit wide LVTTTL parallel bus at the $RCLK_{\pm}$ rate. The SN75LVDT1422 presents valid data on the falling edge of the output clock (CLK OUT).

The SN75LVDT1422 provides three termination resistors for the differential LVDS inputs thus minimizing cost, and board space, while providing better overall signal integrity (SI). The data bus appears the same at the input to the transmitter and output of the receiver with the data transmission transparent to the user(s). The only user interventions are as follows:

Possible use of the TX ENABLE and RX ENABLE feature. Both the TX and RX ENABLE circuits are active-high inputs that independently enable the serializer and deserializer. When TX is disabled, the LVDS outputs go to high impedance. When RX is disabled, the TTL outputs go to a known low state.

The SN75LVDT1422 is characterized for operation over the free-air temperature range of -10°C to 70°C .

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

(1) All typical values are at $V_{CC} = 3.3\text{ V}$, $T_A = 25^\circ\text{C}$.

(2) Receiver skew margin is defined as the valid data sampling region at the receiver inputs. This margin takes into account the transmitter pulse positions (min and max) and the receiver input setup and hold time (internal data sampling window - RSPos). This margin allows for LVDS interconnect skew, inter-symbol interference (both dependent on type/length of cable), and clock jitter (less than 150 ps).

APPLICATION INFORMATION

Power Source Sequence

There is no power-on sequence restriction to V_{CC} , LVDS V_{CC} , and PLL V_{CC} . In most applications, it is recommended to apply the same power source with the separate power planes and decoupling bypass capacitor groups. Use inductors to connect the different power planes.

Transmitter/Receiver Clock/Data Sequencing

There is no special requirement to the sequence of the input clock/data and enable signals. The input clock/data can be inserted after the enable signal is active. It is not necessary to cycle the enable signal when the clock/data is stopped and reapplied, like with the case of changing video modes within a graphics controller. When TX ENABLE pin is pulled low, the LVDS outputs of a SN75LVDT1422 transmitter are high-impedance, the PLL is shut down, and the transmitter is reset. When RX ENABLE is pulled low, the single-ended outputs of a SN75LVDT1422 receiver are at low status, the PLL is shut down, and the receiver is reset.

Spread Spectrum Clock Support

The transmitter of the SN75LVDT1422 accepts spread spectrum clocking signal type inputs. The outputs accurately track spread spectrum clock/data inputs with modulation frequencies of up to 100 kHz (max) with either center spread of $\pm 2.5\%$ or down spread -5% deviations.

Receiver Failsafe Feature

The receiver input failsafe bias circuitry ensures a stable output with known status while the receiver inputs are left floating.

When the receiver enable pin is active and a valid clock signal appears at the clock input, all of the data outputs are high if the data inputs are floating or idle. When the receiver enable pin is active and the clock input is floating, the last valid state is maintained on the data channels if the inputs are floating or idle. When the receiver enable pin is inactive, both data and clock outputs are kept low without considering the input status.

In an application with an unused data input, it is recommended to leave it open.

Receiver Failsafe Summary

RX ENABLE	DATA CHANNEL STATUS	CLOCK CHANNEL STATUS	FAILSAFE RESULT	
			DATA	CLOCK
High	Floating/Idle	Valid clock signal	High	Clock
High	Floating/Idle	Floating/Idle	Last state	Low
Low	Don't Care	Don't Care	Low	Low

Transmitter Input, Receiver Output Pins

The single-ended I/O pins and control input pins are compatible with LVCMOS and LVTTTL levels only. These pins are not 5-V tolerant.

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
