description

The SN74ALS568A decade counter and ′ALS569A binary counters are programmable, count up or down, and offer both synchronous and asynchronous clearing. All synchronous functions are executed on the positive-going edge of the clock (CLK) input.

The clear function is initiated by applying a low level to either asynchronous clear ($\overline{\text{ACLR}}$) or synchronous clear ($\overline{\text{SCLR}}$). Asynchronous (direct) clearing overrides all other functions of the device, while synchronous clearing overrides only the other synchronous functions. Data is loaded from the A, B, C, and D inputs by holding load ($\overline{\text{LOAD}}$) low during a positive-going clock transition. The counting function is enabled only when enable P ($\overline{\text{ENP}}$) and enable T ($\overline{\text{ENT}}$) are low and $\overline{\text{ACLR}}$, $\overline{\text{SCLR}}$, and $\overline{\text{LOAD}}$ are high. The up/down (U/$\overline{\text{D}}$) input controls the direction of the count. These counters count up when U/$\overline{\text{D}}$ is high and count down when U/$\overline{\text{D}}$ is low.

A high level at the output-enable ($\overline{\text{OE}}$) input forces the Q outputs into the high-impedance state, and a low level enables those outputs. Counting is independent of $\overline{\text{OE}}$. $\overline{\text{ENT}}$ is fed forward to enable the ripple-carry output ($\overline{\text{RCO}}$) to produce a low-level pulse while the count is zero (all Q outputs low) when counting down or maximum (9 or 15) when counting up. The clocked carry output ($\overline{\text{CCO}}$) produces a low-level pulse for a duration equal to that of the low level of the clock when $\overline{\text{RCO}}$ is low and the counter is enabled (both $\overline{\text{ENP}}$ and $\overline{\text{ENT}}$ are low); otherwise, $\overline{\text{CCO}}$ is high. $\overline{\text{CCO}}$ does not have the glitches commonly associated with a ripple-carry output. Cascading is normally accomplished by connecting $\overline{\text{RCO}}$ or $\overline{\text{CCO}}$ of the first counter to $\overline{\text{ENT}}$ of the next counter. However, for very high-speed counting, $\overline{\text{RCO}}$ should be used for cascading since $\overline{\text{CCO}}$ does not become active until the clock returns to the low level.

The SN54ALS569A is characterized for operation over the full military temperature range of –55°C to 125°C. The SN74ALS568A and SN74ALS569A are characterized for operation from 0°C to 70°C.

FUNCTION TABLE

INPUTS								OPERATION
$\overline{OE}$	$\overline{ACLR}$	$\overline{SCLR}$	$\overline{LOAD}$	$\overline{ENT}$	$\overline{ENP}$	U/$\overline{D}$	CLK	
H	X	X	X	X	X	X	X	Q outputs disabled
L	L	X	X	X	X	X	X	Asynchronous clear

NOTES: A. C_L includes probe and jig capacitance.
B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
C. When measuring propagation delay items of 3-state outputs, switch S1 is open.
D. All input pulses have the following characteristics: PRR ≤ 1 MHz, $t_r = t_f$ = 2 ns, duty cycle = 50%.
E. The outputs are measured one at a time with one transition per measurement.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS) or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
