

BIPOLAR ANALOG INTEGRATED CIRCUIT

μ PC1352C

CHROMINANCE AND LUMINANCE PROCESSOR FOR NTSC COLOR TV

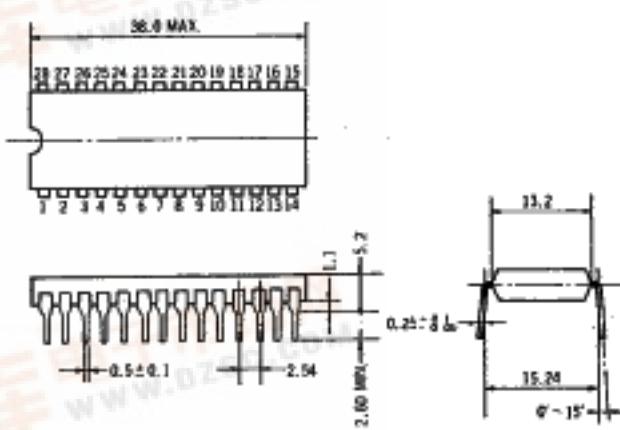

DESCRIPTION

μ PC1352C is an integrated circuit for NTSC system to process both color and luminance signals of the color televisions. It is an MSI contained in a 28 pins dual in line package and provides two functions. One is the processing of color signal for the band pass amplifier, color synchronizer, demodulator circuits, and the other is the processing of luminance signal for the luminance amplifier and pedestal clamp circuits, the number of peripheral parts and controls can be minimized, and the manhours required for the assembling can be considerably reduced.

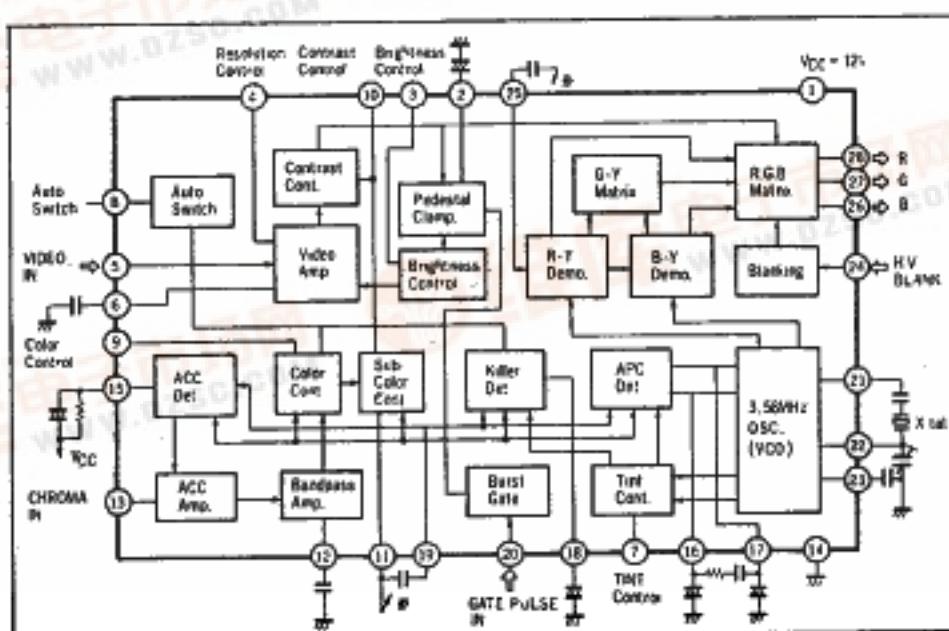

FEATURES

- It needs very few external components, and minimize the adjustments.
- DC controlled circuits make a remote controlled system easy.
- Protection diodes in every input terminals and output terminals.
- "Color killer" does not need any adjustments.
- "Contrast" control does not prevent the natural color of the picture any more, as the color saturation level changes simultaneously.
- ACC (Automatic color controller) circuit operates very smoothly with peak level detector.
- "Brightness control" terminal can be used for ABL (Automatic beam limitter) also.

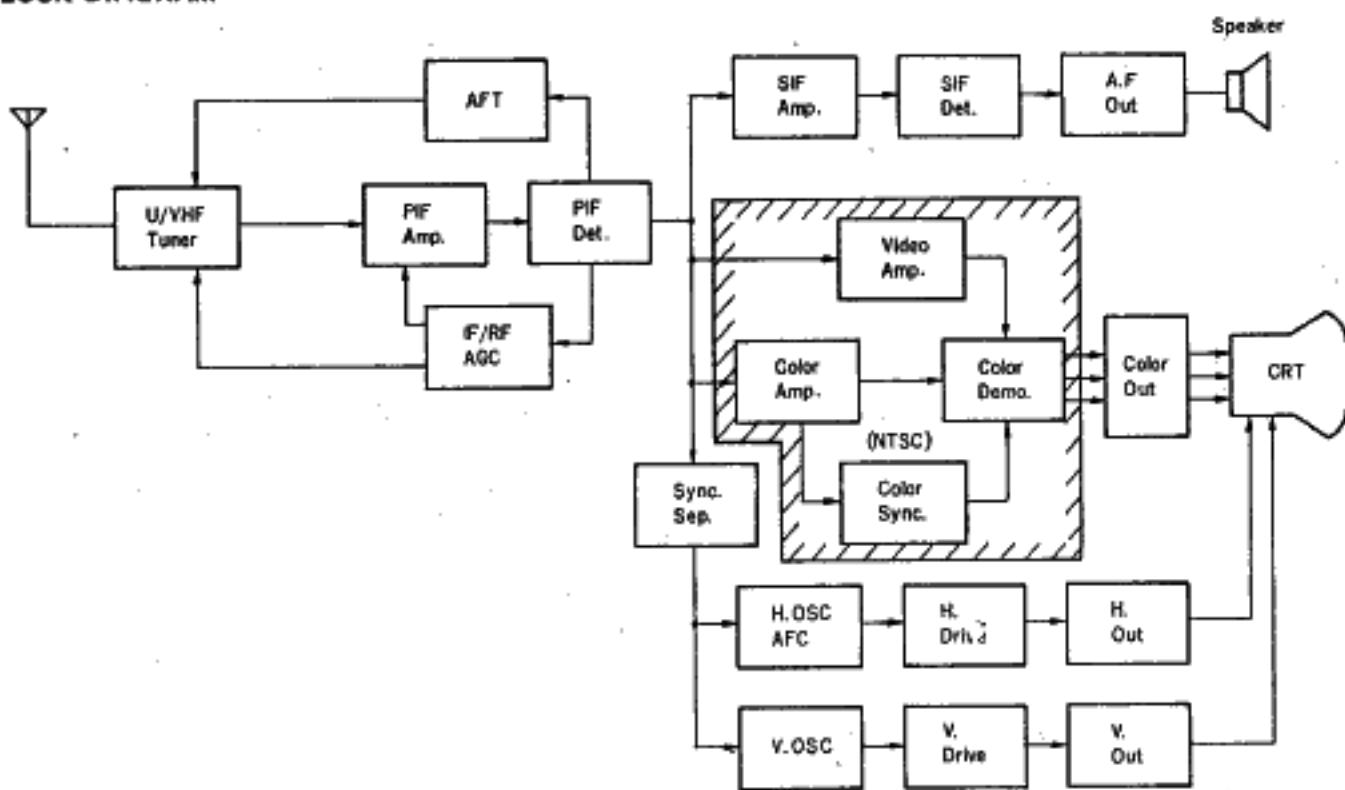

PACKAGE DIMENSIONS in millimeters

THE STANDARD OPERATING CONDITIONS

| Characteristic | Value | Unit |
|---|----------------------------------|-------|
| Supply Voltage | 12 | V |
| Chrominance Input Voltage (Burst signal level) | 150 | mVp-p |
| Luminance Input Voltage (Sync White Level) | 1.0 | Vp-p |
| Burst Gate Pulse Input Voltage | 3.0 | Vp |
| Blanking Pulse Input Voltage | 2.5 | Vp |
| Color saturation controlling Voltage Range | 0~5.7 (at V _{CC} =12 V) | V |
| Tint controlling Voltage Range | 0~5.7 (at V _{CC} =12 V) | V |
| Contrast controlling Voltage Range | 0~12 (at V _{CC} =12 V) | V |
| Resolution controlling Voltage Range | 0~12 (at V _{CC} =12 V) | V |
| Brightness controlling Voltage Range | 8~10 (at V _{CC} =12 V) | V |

Note: In case of operating in V_{CC}=14.4 V, Set the surrounding temperature T_a to be 67 °C.

ABSOLUTE MAXIMUM RATINGS (T_a=+25 °C)

| | | | |
|----------------------------------|---|----------|----|
| Supply Voltage | V _{CC} | 14.4 | V |
| Brightness Controlling Voltage | V ₃ | 14.4 | V |
| Resolution Controlling Voltage | V ₄ | 14.4 | V |
| Contrast Controlling Voltage | V ₁₀ | 14.4 | V |
| Tint Controlling Voltage | V ₇ | 14.4 | V |
| Color Controlling Voltage | V ₉ | 14.4 | V |
| Auto Controlling Voltage | V ₈ | 14.4 | V |
| Luminance Input Signal Voltage | V ₅ | +5 | V |
| Chrominance Signal Input Voltage | V ₁₃ | +2.5 | V |
| Demodulator Input Signal Voltage | V ₂₅ | +5 | V |
| R.G.B Output Current | I _{26,I27,I28} | -40 | mA |
| Gate Pulse Input Voltage | V ₂₀ | +5 | V |
| Gate Pulse Output Current | I ₂₀ | -10 | mA |
| Blanking Pulse Input Voltage | V ₂₄ | ±6 | V |
| Power Dissipation | P _{d1} (T _a =25 °C) | 1.2 | W |
| Power Dissipation | P _{d2} (T _a =70 °C) | 750 | mW |
| Operating Temperature | T _{opt} | -20~+70 | °C |
| Storage Temperature | T _{stg} | -40~+125 | °C |

Test Conditions (V_{CC}=12 V)

| Characteristic | MIN. | TYP. | MAX. |
|---|------|--------------------------|-------------------|
| Color saturation controlling terminal 9 | 0 V | V ₈ /2 V | V ₈ V |
| Tint controlling terminal 7 | 0 V | V ₈ /2 V | V ₈ V |
| Contrast controlling terminal 10 | 0 V | V _{CC} x 0.78 V | V _{CC} V |
| Resolution controlling terminal 4 | 0 V | - | V _{CC} V |

ELECTRICAL CHARACTERISTICS ($T_a = 25^\circ\text{C}$ unless otherwise noted $V_{cc} = 12\text{ V}$)

Color control is manual state and tint is center for the items not specifically specified
