

HIGH-SPEED DIFFERENTIAL RECEIVER

FEATURES

- Controlled Baseline – One Assembly/Test Site, One Fabrication Site
- Extended Temperature Performance of Up to -55°C to 125°C
- Enhanced Diminishing Manufacturing Sources (DMS) Support
- Enhanced Product-Change Notification
- Qualification Pedigree ⁽¹⁾
- 400-Mbps Signaling Rate ⁽²⁾ and 200-Mxfr/s Data Transfer Rate
- Operates With a Single 3.3-V Supply
- -4 V to 5 V Common-Mode Input Voltage Range
- Differential Input Thresholds $< \pm 50\text{ mV}$ With 50 mV of Hysteresis Over Entire Common-Mode Input Voltage Range
- Integrated $110\text{-}\Omega$ Line Termination Resistors On LVDT Products
- Complies With TIA/EIA-644 (LVDS)
- Active Failsafe Assures a High-Level Output With No Input
- Bus-Pin ESD Protection Exceeds 15-kV HBM
- Input Remains High-Impedance On Power Down

- (1) Component qualification in accordance with JEDEC and industry standards to ensure reliable operation over an extended temperature range. This includes, but is not limited to, Highly Accelerated Stress Test (HAST) or biased 85/85, temperature cycle, autoclave or unbiased HAST, electromigration, bond intermetallic life, and mold compound life. Such qualification testing should not be viewed as justifying use of this component beyond specified performance and environmental limits.
- (2) The signaling rate of a line is the number of voltage transitions that are made per second expressed in the units bps (bits per second).

- TTL Inputs Are 5-V Tolerant
- Pin-Compatible With the AM26LS32, SN65LVDS32B, $\mu\text{A}9637$, SN65LVDS9637B

DESCRIPTION

This family of four LVDS data line receivers offers the widest common-mode input voltage range in the industry. These receivers provide an input voltage range specification compatible with a 5-V PECL signal as well as an overall increased ground-noise tolerance. They are in industry standard footprints with integrated termination as an option.

Precise control of the differential input voltage thresholds allows for inclusion of 50 mV of input voltage hysteresis to improve noise rejection on slowly changing input signals. The input thresholds are still no more than $+50\text{ mV}$ over the full input common-mode voltage range.

SN65LVDS33D

ORDERING INFORMATION⁽¹⁾

T_A	PACKAGE ⁽²⁾		ORDERABLE PART NUMBER	TOP-SIDE MARKING
-55°C to 125°C	SOIC - D	Reel of 2500	SN65LVDS33MDREP	LVDS33M

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

DESCRIPTION (CONTINUED)

The high-speed switching of LVDS signals usually necessitates the use of a line impedance matching resistor at the receiving-end of the cable or transmission media. The SN65LVDT series of receivers eliminates this external resistor by integrating it with the receiver. The nonterminated SN65LVDS series is also available for multidrop or other termination circuits.

The receivers can withstand ± 15 -kV human-body model (HBM) and ± 600 -V machine model (MM) electrostatic discharges to the receiver input pins with respect to ground without damage. This provides reliability in cabled and other connections where potentially damaging noise is always a threat.

The receivers also include a (patent pending) failsafe circuit that provides a high-level output within 600 ns after loss of the input signal. The most common causes of signal loss are disconnected cables, shorted lines, or powered-down transmitters. The failsafe circuit prevents noise from being received as valid data under these fault conditions. This feature may also be used for Wired-Or bus signaling. See *The Active Failsafe Feature of the SN65LVDS32B* application note.

The intended application and signaling technique of these devices is point-to-point baseband data transmission over controlled impedance media of approximately 100 Ω . The transmission media may be printed-circuit board traces, backplanes, or cables. The ultimate rate and distance of data transfer is dependent upon the attenuation characteristics of the media and the noise coupling to the environment.

The SN65LVDS33-EP is characterized for operation from -55°C to 125°C .

FUNCTION TABLE⁽¹⁾

SN65LVDS33 and SN65LVDT33

					±25	
					±80	
					±45	
		SN65LVDT V _I = 0 V, Other input open V _I = 2.4 V, Other input open V _I = -4 V, Other input open V _I = 5 V, Other input open			±50	μA
					±50	
					±180	
					±95	
I _{IO}	Differential input current (I _{IA} - I _{IB})	SN65LVDS V _{ID} = 100 mV, V _{IC} = -4 V or 5 V			±5	μA
		SN65LVDT V _{ID} = 200 mV, V _{IC} = -4 V or 5 V	1.55		2.4	mA
I _{I(OFF)}	Power-off input current (A or B inputs)	SN65LVDS V _A or V _B = 0 V or 2.4 V, V _{CC} = 0 V V _A or V _B = -4 V or 5 V, V _{CC} = 0 V			±25	μA
					±60	
		SN65LVDT V _A or V _B = 0 V or 2.4 V, V _{CC} = 0 V V _A or V _B = -4 V or 5 V, V _{CC} = 0 V			±35	
					±120	
I _{IH}	High-level input current (enables)	V _{IH} = 2 V			12	μA
I _{IL}	Low-level input current (enables)	V _{IL} = 0.8 V			12	μA
I _{OZ}	High-impedance output current		-10		12	μA
C _I	Input capacitance, A or B input to GND	V _I = 0.4 sin (4E6πt) + 0.5 V		5		pF

(1) All typical values are at 25°C and with a 3.3-V supply.

SWITCHING CHARACTERISTICS

over recommended operating conditions (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP ⁽¹⁾	MAX	UNIT
$t_{PLH(1)}$ Propagation delay time, low-to-high level output	See Figure 3	1.8	4	8	ns
$t_{PHL(1)}$ Propagation delay time, high-to-low level output		1.8	4	8	ns
t_{d1} Delay time, failsafe deactivate time	$C_L = 10$ pF, See Figure 3 and Figure 6			11	ns
t_{d2} Delay time, failsafe activate time		0.2		2	μs
$t_{sk(p)}$ Pulse skew ($ t_{PHL(1)} - t_{PLH(1)} $)	See Figure 3		200		ps
$t_{sk(o)}$ Output skew ⁽²⁾			150		ps
$t_{sk(pp)}$ Part-to-part skew ⁽³⁾				1.2	ns
t_r Output signal rise time			0.8		ns
t_f Output signal fall time			0.8		ns
t_{PHZ} Propagation delay time, high level-to-high impedance output	See Figure 4		5.5	12	ns
t_{PLZ} Propagation delay time, low level-to-high impedance output			4.4	12	ns
t_{PZH} Propagation delay time, high impedance-to-high level output			3.8	12	ns
t_{PZL} Propagation delay time, high impedance-to-low level output			7	12	ns

(1) All typical values are at 25°C and with a 3.3-V supply.

(2) $t_{sk(o)}$ is the magnitude of the time difference between the t_{PLH} or t_{PHL} of all receivers of a single device with all of their inputs driven together.

(3) $t_{sk(pp)}$ is the magnitude of the time difference in propagation delay times between any specified terminals of two devices when both devices operate with the same supply voltages, at the same temperature, and have identical packages and test circuits.

Figure 1. Voltage and Current Definitions

NOTE: Input signal of 3 Mpps, duration of 167 ns, and transition time of <1 ns.

Figure 2. V_{IT1} and V_{IT2} Input Voltage Threshold Test Circuit and Definitions

NOTE: All input pulses are supplied by a generator having the following characteristics: t_r or $t_f \leq 1 \text{ ns}$, pulse repetition rate (PRR) = 50 Mpps, pulsewidth = $10 \pm 0.2 \text{ ns}$. C_L includes instrumentation and fixture capacitance within 0,06 mm of the D.U.T.

Figure 3. Timing Test Circuit and Waveforms

NOTE: All input pulses are supplied by a generator having the following characteristics: t_r or $t_f \leq 1$ ns, pulse repetition rate (PRR) = 0.5 Mpps, pulsewidth = 500 ± 10 ns. C_L includes instrumentation and fixture capacitance within 0,06 mm of the D.U.T.

TYPICAL CHARACTERISTICS (continued)

Figure 11.

APPLICATION INFORMATION

- Place a 0.1-μF Z5U ceramic, mica or polystyrene dielectric, 0805 size, chip capacitor between V_{CC} and the ground plane. The capacitor should be located as close as possible to the device terminals.
- The termination resistance value should match the nominal characteristic impedance of the transmission media with ±10%.
- Unused enable inputs should be tied to V_{CC} or GND as appropriate.

Figure 12. Operation With 5-V Supply

RELATED INFORMATION

APPLICATION INFORMATION (continued)

ACTIVE FAILSAFE FEATURE

A differential line receiver commonly has a failsafe circuit to prevent it from switching on input noise. Current LVDS failsafe solutions require either external components with subsequent reductions in signal quality or integrated solutions with limited application. This family of receivers has a new integrated failsafe that solves the limitations seen in present solutions. A detailed theory of operation is presented in application note, *The Active Failsafe Feature of the SN65LVDS32B* (SLLA082A).

Figure 13 shows one receiver channel with active failsafe. It consists of a main receiver that can respond to a high-speed input differential signal. Also connected to the input pair are two failsafe receivers that form a window comparator. The window comparator has a much slower response than the main receiver and it detects when the input differential falls below 80 mV. A 600-ns failsafe timer filters the window comparator outputs. When failsafe is asserted, the failsafe logic drives the main receiver output to logic high.

Figure 13. Receiver With Active Failsafe

APPLICATION INFORMATION (continued)

ECL/PECL-to-LVTTL CONVERSION WITH TI'S LVDS RECEIVER

The various versions of emitter-coupled logic (i.e., ECL, PECL and LVPECL) are often the physical layer of choice for system designers. Designers know of the established technology and that it is capable of high-speed data transmission. In the past, system requirements often forced the selection of ECL. Now technologies like LVDS provide designers with another alternative. While the total exchange of ECL for LVDS may not be a design option, designers have been able to take advantage of LVDS by implementing a small resistor divider network at the input of the LVDS receiver. Texas Instruments has taken the next step by introducing a wide common-mode LVDS receiver (no divider network required) which can be connected directly to an ECL driver with only the termination bias voltage required for ECL termination ($V_{CC} - 2\text{ V}$).

Figure 14 and Figure 15 show the use of an LV/PECL driver driving five meters of CAT-5 cable and being received by Texas Instruments wide common-mode receiver and the resulting eye-pattern. The values for R3 are required in order to provide a resistor path to ground for the LV/PECL driver. With no resistor divider, R1 simply needs to match the characteristic load impedance of $50\ \Omega$. The R2 resistor is a small value and is intended to minimize any possible common-mode current reflections.

PACKAGING INFORMATION

Orderable Device	Status ⁽¹⁾	Package Type	Package Drawing	Pins	Package Qty	Eco Plan ⁽²⁾	Lead/Ball Finish	MSL Peak Temp ⁽³⁾
SN65LVDS33MDREP	ACTIVE	SOIC	D	16	2500	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM
V62/05614-01XE	ACTIVE	SOIC	D	16	2500	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

NOTES:

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 (0,15) per end.
- D. Body width does not include interlead flash. Interlead flash shall not exceed .017 (0,43) per side.
- E. Reference JEDEC MS-012 variation AC.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
