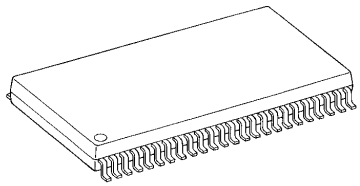
TOSHIBA CMOS DIGITAL INTEGRATED CIRCUIT SILICON MONOLITHIC

TC74VCXR162245FT

LOW-VOLTAGE 16-BIT BUS TRANSCEIVER WITH 3.6V TOLERANT INPUTS AND OUTPUTS

The TC74VCXR162245FT is a high performance CMOS 16-bit BUS TRANSCEIVER. Designed for use in 1.8, 2.5 or 3.3 Volt systems, it achieves high speed operation while maintaining the CMOS low power dissipation.
It is also designed with over voltage tolerant inputs and outputs up to 3.6V.
This 16bit bus transceiver is controlled by direction control (DIR) inputs and output enable ($\overline{OE}$) inputs which are common to each byte. It can be used as two 8-bit transceivers or one 16-bit transceiver. The direction of data transmission is determined by the level of the DIR inputs.
The $\overline{OE}$ inputs can be used to disable the device so that the busses are effectively isolated.
The 26-Ω series resistor helps reducing output overshoot and undershoot without external resistor.
All inputs are equipped with protection circuits against static discharge.



TSSOP48-P-0061-0.50

Weight : 0.25g (Typ.)

FEATURES

- 26-Ω Series Resistors on all Outputs.
- Low Voltage Operation : V_{CC} = 1.8~3.6V
- High Speed Operation : t_{pd} = 3.4ns (max.) at V_{CC} = 3.0~3.6V
  : t_{pd} = 4.3ns (max.) at V_{CC} = 2.3~2.7V
  : tpd = 5.7ns (max.) at V_{CC} = 1.8V
- 3.6V Tolerant inputs and outputs.
- Output Current : I_{OH} / I_{OL} = ±12mA (min.) at V_{CC} = 3.0V
  : I_{OH} / I_{OL} = ±8mA (min.) at V_{CC} = 2.3V
  : I_{OH} / I_{OL} = ±4mA (min.) at V_{CC} = 1.8V
- Latch-up Performance : ±300mA
- ESD Performance : Human Body Model > ±2000V
  : Machine Model > ±200V
- Package : TSSOP (Thin Shrink Small Outline Package)
- Bidirectional interface between 2.5V and 3.3V signals.
- Power Down Protection is provided on all inputs and outputs
- Supports live insertion / withdrawal (Note 3)

Note 1) Do not apply a signal to any bus terminal when it is in the output mode. Damage may result.
2) All floating (high impedance) bus terminal must have their input level fixed by means of pull up or pull down resistors.
3) To ensure the high-impedance state during power up or power down, $\overline{OE}$ should be tied to V_{CC} through a pullup resistor; the minimum value of the resistor is determined by the current-sourcing capability of the driver.
