

TC74VCXR162646FT

LOW VOLTAGE 16-BIT BUS TRANSCEIVER / REGISTER WITH 3.6 V TOLERANT INPUTS AND OUTPUTS

The TC74VCXR162646FT is a high performance CMOS 16-bit BUS TRANSCEIVER / REGISTER. Designed for use in 1.8, 2.5 or 3.3 Volt systems, it achieves high speed operation while maintaining the CMOS low power dissipation. It is also designed with over voltage tolerant inputs and outputs up to 3.6 V.

This device is bus transceiver with 3-state outputs, D-type flip-flops, and control circuitry arranged for multiplexed transmission of data directly from the internal registers. The 26- Ω series resistor helps reducing output overshoot and undershoot without external resistor.

All inputs are equipped with protection circuits against static discharge.

- Power Down Protection is provided on all inputs and outputs
- Supports live insertion / withdrawal (Note 3)

(Note 1) : Do not apply a signal to any bus terminal when it is in the output mode. Damage may result.

(Note 2) : All floating (high impedance) bus terminal must have their input level fixed by means of pull up or pull down resistors.

(Note 3) : To ensure the high-impedance state during power up or power down, $\overline{OE}$ should be tied to V_{CC} through a pullup resistor; the minimum value of the resistor is determined by the current-sourcing capability of the driver.
