Application Notes

Derating:

The operating case temperature range of the VHB75 series is -40°C to +100°C. When operating the VHB75, proper derating or cooling is needed. Following is the derating curve of VHB75 without heat sink.

Where:

The power dissipation (Pd) is

$$P_d = P_i - P_o = P_o \left(\frac{1}{\eta} \right) - P_o$$

The thermal resistances are listed below.

Chart of Thermal Resistance vs Air Flow:

AIR FLOW RATE	TYPICAL R _{ca}
Natural Convection	7.12 °C/W
100 ft./min.	6.21 °C/W
200 ft./min.	5.17 °C/W
300 ft./min.	4.29 °C/W
400 ft./min.	3.64 °C/W

The temperature rise (ΔT):

$$\Delta T = P_d \times R_{ca}$$

Remote ON/ OFF Control

The VHB75 series allows the user to switch the module on and off electronically with the remote on/off feature. The VHB75 series is available with “ positive logic” or “ negative logic” options.

Logic Table

Logic State (PIN 2)	Negative Logic	Positive Logic
Logic Low - Switch Closed	Module on	Module off
Logic High - Switch Open	Module off	Module on

External Output Trimming

Output may optionally be externally trimmed ($\pm 10\%$) with a fixed resistor or an external trimpot as shown.

Output Noise

The output noise is measured with a $10\mu\text{F}$ tantalum capacitor and a $1.0\mu\text{F}$ ceramic capacitor across the output.
