Mounting rails 查询"38340"供应商

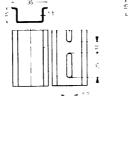

The mounting rail can also be used as a protective busbar. Weidmüller PE terminals of the W and SAK series meet the requirements specified in VDE 0611 Part 3. In accordance with VDE 0100 Part 540, at conductor cross-sections of 10 mm<sup>2</sup> and more, protective conductor and neutral conductor can be combined into one line with the symbol OPEN. If mounting rail is used as a PEN busbar, the following criteria must be observed:

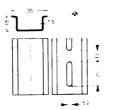

- Only an E-Cu profile may be used
  The short-circuit currents and the rated terminal currents must be observed.
- The mounting rails must be insulated for the protective measure, "protective insulation"

Depending on the various applications, the mounting rails are made of steel, aluminium or copper. All steel versions are electroplated and additionally passivated with a yellow chromate coating. For reasons of shipping, 1 m mounting rails are supplied for quantities for up to 10 m.

All non-slotted mounting rails can be provided with fixing holes (please state dimensions b and I<sub>2</sub>). Additionally, all non-slotted steel rails can be supplied with welded steel bolts (please state dimensions a and the desired bolt).
