

Lockout/Tagout-System

Lockout Labels

The ideal supplement to the BRADY Lockout programme: Lockout labels

All lockout and safety devices should display information. Who has installed the lock-off device, for what purpose, and who has authorized it's removal or alteration.

These robust Lockout labels are ideally suited for this purposes.

Size: 75 x 145 mm.

The matt surface makes it ideally suited to labelling with ball pens or felt pens.

A long-lasting and stable finish prevents unintentional removal. The polypropylene material is waterproof and oil resistant and can withstand extreme temperatures.

Available in packs of 10 Lockout Labels with 10 Nylon™ ties for easy attachment.

Of course, according to the regulations you also have to label the pipes! Make sure you turn to page 14 "Labelling of Pipes" in this catalogue.

Type A

Type B

Type C

Reverse side for Type A, B, C

Part No./ Language	Type A	Type B	Type C
English	265548	265549	265550
French	265554	265555	265556
German	265551	265552	265553
Dutch	265557	265558	265559

Use the differently coloured valve lockout devices to show the degree of danger (e.g. red for extreme danger, blue for less danger) or for the fluid in the pipes (e.g. yellow for gases, green for water etc.).

The coloured markings of the locks can also be used to great effect to identify service teams or departments, for example red for electricians, blue for mechanics etc.
