## Single Supply, High Slew Rate, Low Input Offset Voltage Operational Amplifiers

The MC33272/74 series of monolithic operational amplifiers are quality fabricated with innovative Bipolar design concepts. This dual and quad operational amplifier series incorporates Bipolar inputs along with a patented Zip-R-Trim element for input offset voltage reduction. The MC33272/74 series of operational amplifiers exhibits low input offset voltage and high gain bandwidth product. Dual-doublet frequency compensation is used to increase the slew rate while maintaining low input noise characteristics. Its all NPN output stage exhibits no deadband crossover distortion, large output voltage swing, and an excellent phase and gain margin. It also provides a low open loop high frequency output impedance with symmetrical source and sink AC frequency performance.

The MC33272/74 series is specified over  $-40^{\circ}$  to  $+85^{\circ}\text{C}$  and are available in plastic DIP and SOIC surface mount packages.

### Features

- Pb-Free Packages are Available
- Input Offset Voltage Trimmed to  $100\ \mu\text{V}$  (Typ)
- Low Input Bias Current:  $300\ \text{nA}$
- Low Input Offset Current:  $3.0\ \text{nA}$
- High Input Resistance:  $16\ \text{M}\Omega$
- Low Noise:  $18\ \text{nV}/\sqrt{\text{Hz}}$  @  $1.0\ \text{kHz}$
- High Gain Bandwidth Product:  $24\ \text{MHz}$  @  $100\ \text{kHz}$
- High Slew Rate:  $10\ \text{V}/\mu\text{s}$
- Power Bandwidth:  $160\ \text{kHz}$
- Excellent Frequency Stability
- Unity Gain Stable: w/Capacitance Loads to  $500\ \text{pF}$
- Large Output Voltage Swing:  $+14.1\ \text{V}$  /  $-14.6\ \text{V}$
- Low Total Harmonic Distortion:  $0.003\%$
- Power Supply Drain Current:  $2.15\ \text{mA}$  per Amplifier
- Single or Split Supply Operation:  $+3.0\ \text{V}$  to  $+36\ \text{V}$  or  $\pm 1.5\ \text{V}$  to  $\pm 18\ \text{V}$
- ESD Diodes Provide Added Protection to the Inputs
- NCV Prefix for Automotive and Other Applications Requiring Site and Control Changes

| Operating Temperature Range<br>MC33272A, MC33274A<br>NCV33274A     | $T_A$                | -40 to +85<br>-40 to +125 | °C   |

Maximum ratings are those values beyond which device damage can occur. Maximum ratings applied to the device are individual stress limit values (not normal operating conditions) and are not valid simultaneously. If these limits are exceeded, device functional operation is not implied, damage may occur and reliability may be affected.

1. Either or both input voltages should not exceed  $V_{CC}$  or  $V_{EE}$ .
2. Power dissipation must be considered to ensure maximum junction temperature ( $T_J$ ) is not exceeded (see Figure 2).
