

Distinctive Characteristics

Power and logic level capabilities available to suit varying applications.

High torque bushing prevents rotation and separation from metal frame during installation.

Stainless steel frame resists corrosion.

Case of heat resistant resin meets UL94V-0 flammability rating.

Antijamming design protects contact mechanism from damage if lever is subjected to sharp downward force or other harsh treatment.

Bias guard achieved by interlocking actuator block with lever and interior guide; diagonal force on toggle is not transmitted to actuator block and misalignment of contacts is prevented.

Higher insulating barriers protect against crossover in double pole devices.

1,500V dielectric strength between contacts and case is accomplished by clinching the frame away from the terminals.

Epoxy sealed terminals prevent entry of solder flux and other contaminants.
