

SOLISTRAND Terminals and Salices

SOLISTRAND terminals and connectors are crimped to the conductor with the "W-crimp" tooling.

SOLISTRAND terminals and connectors are suitable for stranded conductors and formed solid-wire conductors - alone or in combination with other solid wires, special application guidelines can be referred to.

The dimensions of the terminal barrels keep the space requirements for AMP SOLISTRAND products extremely small. They are, especially well suited for compact packages. Their special design guarantees above average electrical and mechanical performance. SOLISTRAND terminals and connectors are available for a wide range from 0.4 mm² to 300 mm².

SOLISTRAND terminals are made from electrolytic copper and are tin-plated to improve the corrosion resistance. The barrel has serrations to insure an optimal surface contact with maximum length.

The bellmouth of the barrel entrance makes insertion of the stripped conductor easier.

The "W-crimp" has two characteristic depressions, which hold the conductor in the middle of the terminal barrel and guarantee surface contact.

The connection often shows higher tensile strength than the conductor. At the same time it is fatigue safe and protected against vibration and corrosion.

The advantage of the W-crimp is its ability to crimp formed solid conductors. The only technically satisfactory solution to the connection of solid conductors without soldering.

High temperature versions - up to 650 °C - are available.

Inner Serrations provide maximum tensile strength

Bellmouth of barrel entrance for easier insertion of wires

Conductor Combinations

One solid wire

One solid wire, one stranded wire

Two solid wires

Two solid wires one stranded wire
